++++++++++++++++++++
haha.............. Don't wasnt to mess wid da force!

>
> There are other places and things that can vary
> their HV current draw...
> also, appliances like an AC, even your neighbors,
> will show up om the
> plate meter.
+++++++++++++++++
Don't think its that, it causes static on the AM radio, messes up the
Country music bad! If it was rap music it'd be an improvement. Drives
the wattmeter from 300 to almost 600.

>
> Does it do it in AM or CW or dosen't matter?
++++++++++++++++++++
Haven't tried the CW yet.

>
> Did you see arcing in the 3B28s?
Um,........... the blue cloud gets real big and small sparks fly up to
it, really cool looking, when it settles down to "normal", and it does
do that, its only a problem on starting to transmit on high power, then
there's no problem, all meters hold steady and quiet.

>

> interlock), then the mod deck (jumper the interlock)
> and see if it goes
> away.
++++++++++++++++
Found this by pulling the back panel and listening for arcing, it
didn't make much noise when closed up, couldn't really tell where it
was coming from, but with B-2 off and the back open its obvious.

>
> As always, jumper the interlocks with great care as

++++++++++++++++++
Yes, I like that one better. Not as precise but it'll have better
results.

Joe

## 2. Welcome

Yahoo group: T-368_BC-610
Date: 1999-08-17 22:31:54 UTC
From: Joe Foley
Topic: 2  Message: 2

Hi,

My name is Joe Foley and I though that it would be great if the owners of T-368 transmitters had a mailing list just like the owners of R-390's do. So far we only have five subscribers but I started this yesterday.

Personally I don't have any problem with anyone uasing this list for BC-610 related information as that was the predecessor and has the same specs and function. But its up to you, too, so if anyone has any input on that let's hear it.

I bought my T-368 from Fair Radio two months ago and have been cleaning, checking, and replacing parts (very few) ever since. Mostly just cleaning!

So far K-9 had one set of contacts burned shut, the filament voltage meter has a crack in it, K-10 was missing, one broken crank knob, filament pot, burned out in one spot, replaced with one that will work, all graciously replaced by Phil at Fair.

Repairs so far:

Re-soldered the HV lead to one of the rectifiers (bad job by mil-tech)

Bang out dent in power supply deck near interlock, so interlock would make contact. Straighten sides (I've happy now, I got to hit it with a hammer!)

New bearings for both fans.

Enlarge hole for B-2 to lower pressure in the infeed area and lower air/noise ratio.

Set spark gaps.

Tighten all fasteners.

Clean, clean, clean, clean! and then clean!

Built way-heavy skate board with huge casters.

Changed power cord for one with 10/3 and a ground. 1 1/4" plumbing bushing fits the existing hole, with lock nut inside and a 3/4" Kellem strain relief fits into that, neatly.

The cabinet was real ugly when I first saw it but it was very straight and the primer filled all of the scratches on the first coat, it looks new now, at least the cabinet does the modules are going to have to

wait 'til winter.

Power up has gone good with small hitches, mostly of my own making. Twisted off one of the 3B28's, ouch that's expensive!. Still have one arcing.

How'd yours go?

Later,

Joe

++++++++++++++++++
W2 in So. Fla.?

Hmm,..... the shipping for a T-3 is a PAIN!

They're 750 L.b.s. (That's Lotsa B.S.)

I ended up making the trip to Lima, OH (600 miles, one way) to pick mine up as the trucker was waiting for it to become an antique before he would get to it. It just fit into my 3/4 ton pickup with a "high" cap.

If you were going to have it shipped you would need to have a fork lift on your end to get it off the truck. I was able to get mine off from my truck by removing the modules and then wrassling (that IS the proper spelling) the cabinet off seperately. But then I'm only 45 years old, 6'3", 200 Lbs and cut firewood with a crosscut saw. (Sure sign of insanity!)

The power deck weighs well over 100 Lbs by itself and I don't pick it up unless I really have to.

We'll keep looking!

Joe

Hi Joe and all T-368/BC-610 owners,

I am very happy to see a list created for owners/users or just interested persons of the T-368/BC-610 transmitters. I own both a T-368 and a BC-610. Looking for spare parts and/or complete units. Would like to put together a GRC-26 hut on a military vehicle.
Looking for any WEB sites with info on these transmitters. A list would be nice to compile.

Here is a great site: www.buffnet.net/~bhowes/t-368.htm

++++++++++++++++++++++++++
Thanks, Verne,

There is a unit like you mentioned, the GRC-26 available near Houston,
he has the T-3 and R-390 A's set up for RTTY I think. His name is
Larry Lowry, I'll see if I can get a hold of him if you're interested.
He only has the shelter, no truck but M-211's are easy to find.

If you found Bruce's website you have about all there is, Ol' Ott
Kazott has one, he'll be along soon, I signed him onto this list today.
That's why I started this list, we need to get together so we can make
more information!

Thanks,

Joe KG2CI

Hi Joe and Group,

I'm glad the T-368 got a mailing list.
I have a T-368F, antenna tuner, ME-165 and the control box + 2 R-390A's in a rack all cabled together as in the GRC-26.
I use the T-3 on the Saturday morning East Coast Military Radio Collectors' Net when conditions dictate using high power (otherwise I'm on the GRC-19 or if conditions are really good, I use either the GRC-9 or the BC-1306. My T-368 is completely unmodified, as issued (via Fair Radio, when they still had a good selection of them, newly retubed, tested and stored). As a principle, I never modify any original military equipment.

It'd be nice to have the complete GRC-26 shelter and keep the T-3 and stuff in it, but right now one shelter, a complete as issued, with all the equipment GRC-42B (GRC-106A+RTTY gear but without the original military truck) is all the XYL is willing to look at in the back yard.

73, Meir WF2U

++++++++++++++++++++++
Hi Meir,

The last I knew, when I was out there a few months ago, they had ONE
T-368 left and its ugly! But it probably works. They said they hadn't
gotten any in at least five years.

I've got the 939 antenna tuner but the cover isn't right, it fits on
but won't latch. I'd like to find a control box, that'd be good.

They have the ME-165's new-in-the-box with the manual and changes.

They have the 6000 tube for $25.00 and 3B28's for $14.00.

Maybe if you lined the shelters up one behind the other she wouldn't be able to see both of them, ....nah, you'd probably just end up living in one of them. Hmmm,.....

Hello Gene, the plate choke is from RF parts (www.rfparts.com) I think it was $25. Quite husky... It is supposedly used in some of the Ameritron amps and good for 160 thru 10. I don't have 160 in my monster so don't know if it is indeed good there.

73, Bill

Hey Gene,

What'd you think about my punching out the hole for the air intake?
That and new bearings might help that.

OK, Joe, I do need the interlock switches for my BC-610. Also the door latch for the right side door. Some very thoughtful guy previously removed them. Also, I need an overload reset switch. Anybody have the specs, and what is the best way to install it (kind of hard to get at). BTW, a new plate relay would be very nice, and, while we're at it, does anybody have one of those low freq conversion kits? Let me know. vry 73 es good AM DX, Ron -- W1ARS www.qsl.net/w1ars/

Any body got any good deals on tubes?

I need some 3B28's to get this thing "off the ground"!

So far they range from $14 to $31, quite a spread, huh?

Then there's those 6000 tubes.....

Thanks,

Joe

That's some spread on the 3B28's!!

Fair Radio wants $14 for them and $25 for the 6000 tube.

Anybody have any other hot tips?

This is the response I got from this company regarding the tube list I posted yesterday. What do you think of it? Should I do business with them? Would you?

From: Joe Foley
Topic: 24  Message: 24

I've changed the name of the list to include the other transmitter
because some felt left out.

I've also changed the protocol for replying, it used to default to the
list, but now a reply will go to the sender instead. I think it works
better that way.

Let me know what you think, Ok?

Thanks,

Joe

Joe,

Thanks for including the BC-610 in the list name.

Why have the replies sent to the sender, instead of the list?
Those of us who are interested in the T-3, etc. are also interested
in those replies. Otherwise, it is like listening to a one sided
conversation. I, for one, would like to hear all responses.

Thanks,

Hi Joe:

Want to express my thanks for your efforts in promoting the T-3. I'm glad to be a part of this VERY elite group. Waiting delivery of my "E" model with ant tuner, remote, power meter and RTTY modulator. These will be trucked by the previous owner the 20 miles to the new QTH. Probably set this up for this weekend.

Best 73's to you and the group and again THANKS.

## 29. 3815 Kc...

Yahoo group: T-368_BC-610
Date: 1999-08-27 20:45:36 UTC
From: ott kazott
Topic: 29  Message: 29

A night ago I tried out 3815, a lightly used "alternate" 75 meter east coast AM window. Worked a couple of contacts from PA and Mass. They had been monitoring SSB up the band a bit but switched to AM when they heard the T-3.

It was clear channel operation with no congestion and no interference from others.

Those list members not wanting to get up early on Saturdays for the Old Military Radio Net might want to consider using this frequency as an informal (PTT) evening meeting place to run up their mil-spec gear.

++++++++++++++++
I was wondering about that, since the "C" came out a few years after
the Basic I was wondering how many there were of the early models.

> The other has military

++++++++++++++++++++
The schematics are a pain, they're not consistent between models, the
old ones have a 110 VAC antenna relay and the newer ones have a 26VDC
relay, just for example.

Both

++++++++++++++++++++
Do you mean besides the obvious logistics problems of using and moving
a transmitter that weighs more than some shelters?

I made a frame for the casters out of three inch channel, the casters
are 5",three hundred pound capacity ones. That's needed along with a
strong floor.

It also draws ten amps at idle, that might have a little to do with it,
too. But I'll use mine for a space heater, too!!

Gee, I feel honored, mine has, evidently, all 1967 modules from the
same manufacturer, Bendix Aviation. Not quite sure of the RF deck, its
silk screened while the others are engraved. May mean nothing, could
have been the same contract, don't know.

Still not sure exactly what the difference is between the "F" and "E"
models. Mine's an "E".

From: Joe Foley
Topic: 37  Message: 37

Hi list,

I have finally found the source of the arcing in the power supply deck of my "new" T-368.

Seems the HV wire is in pretty bad shape.

I tried 3M's130C Linerless Rubber Splicing Tape for low and high voltage (thru 69K V).....well I don't think so!!!!!

I used the 1" wide stuff and half lapped it to absolutely NO good effect or result.

Mind you I could NOT see any damage, smoke marks, corona, or other indication of leakage. Except where the miltechs had replaced one of the leads going to the HV rectumfriers. (Yes, I've been listening to Tim,..... too much!)

Could THAT be it? Don't know,..... yet.

What finally stopped the arcing was some fibreglass tape, sticky stuff, 1 1/2' wide, 3M again. I wrapped anything going through, or near, the chasis. I put it on the chasis between the wire and ground. Wrapped it around the mounting bracket for the bleeder resistor in the back where the wire goes around the sharp corner. Put it between the wires on the rectumfrier sockets.

So what I'm saying is that I don't really know where the problem was. But it looks like I have to re-wire the HV.

ABLE Electronics is looking for a deal on HV hookup wire for me, Kelly says she can get her suppliers to send out a "test" sample so I won't have to buy a 250' roll for $1/ft. She said they DIDN"T mind selling to small buyers!

What d'ya think of that?

> serious B+, not for filaments tho.
+++++++++++++++
The 14 ga. feeds HV to the rest of the xmtr. Smaller may handle it
but I don't know about handling any surge currents, should keep it the
same gauge.

# 41. T-368 Audio suggestions.

Yahoo group: T-368_BC-610
Date: 1999-09-01 14:28:44 UTC
From: Verne Anderson
Topic: 41  Message: 41

Hi all,

I am interested in what other T-368 owners have done with their audio circuit to improve or modify it for a more useable circuit? What microphones are being used? I am bringing back to life a unit and would like suggestions on modifying the audio circuit to be compatible with a D-104 or Shure 444. Maybe everyone is either using it with a original mic or gone to expensive broadcast input equipment for audio?

Verne

From: mbendror@xxxxxxxxxx.xxx
Topic: 41  Message: 42

I left my T-368E completely intact, because a.) I will never modify old military equipment. They are not currently in production, their numbers are dwindling and they are irreplaceable after they're gone (just like I won't modify any antique artifact) - The gear was designed for a certain purpose and I want to preserve the technological and technical features. b.) the audio is designed for the voice spectrum of 300-3000Hz which is where the most information is in human speech, therefore the most efficient for communications (not to say the least about the excessive bandwidth generated by "hi-fi" audio which is inconsiderate towards others sharing the amateur bands and is also illegal).

My T-368 is hooked up in the GRC-26A configuration, with the remote control box where the microphone is connected. I'm using either the original, as specified M-29 carbon mike or sometimes an old Electrovoice handheld, 500 Ohm dynamic mike which interfaces nicely with the 600 Ohm line input to the transmitter.

This is my $0.02 worth. Others of course may have different and diverse opinions....

From: W7QHO@xxx.xxx
Topic: 41  Message: 45

Verne,

There are a number of things one can do to taylor T-368 audio to suit particular tastes. For a truly military, communications quality sound, of course, just use the original M-29 mic. For even more authenticity crank up the clipping level.

The M-29s sound pretty crappy to most people's ears, though, and a significantly more pleasing sound can be achieved by using almost anything else. I have found the Motorola TMN-6054A hand mics sound very good with the T-368. These microphones have a magnetic cartridge with some built-in transistor circuitry and work directly into the existing T-368 carbon mic input. You will find a basket of these units at most hamfests going for $2 - $3 each (typically) and you'll have to rig up a U77 connector on the end of the cord. Backing off the clipping level improves quality too, of course.

The D-104 sounds even better and the amplified version can be run directly into the 600 ohm audio input at the rear of the cabinet (multi-pin socket at the bottom). Some users have reported hum problems using this input but I have experienced no difficulties using shielded audio and keying lines up to 20 ft long. Shielding and careful grounding are important here. Modifications to the existing speech amp to allow use of high impedance microphones can also be found in Electric Radio #3, July 1989, and probably elsewhere.

Many users also bypass the clipper and associated high and low-pass filters found in the speech amplifier. This can be done without physically removing any existing components and is easily reversable.

Moving deeper into the circuitry, stock T368s do exhibit a significant audio roll-off starting about 1200 Hz, with response down about 4db at 3 kHz just before the high-pass filter in the speech amp kicks in. This is because the modulation transformer secondary is shunted by something like 7000 pf due to the design of the power amplifier. The PA uses a Pi-L tank circuit which is shunt fed in the "middle" of the
network rather than at the high impedance end as is done in most ham designs. This was apparently done to overcome the difficulties of designing a high impedance plate choke for the 4-400 that wasn't series resonant ANYWHERE in the 1.5 to 20 mHz operating range. Designing such a choke would be a difficult task and other wide range transmitters such as the T-195, SRT-14 and the GPT-750 bandswitch plate chokes along with the other usual tank circuit components. By feeding the B+ into the circuit at a lower impedance point a smaller choke can be used and the designers were able to find (or make) a simple, single unit that works over the entire frequency range. For military voice use, the dropoff in frequency response that came with this design was apparently not important (more on this below).

The situation described above can be improved a couple of db by reducing the size of the blocking capacitor between the Pi and L sections of the plate tank to 1000 pf, and reducing the decoupling capacity in the plate lead feeding the B+ end of the plate choke to a total of 1000 pf. (early transmitters have a single decoupling cap in the B+ lead and later units had an additional series RF choke bypassed at both ends). These modifications change the PA tuning and loading settings somewhat especially on 160 meters but do not cause any apparent degrdation in efficiency or output.

A number of users have gone "all the way" here by shunt feeding their PAs at the high impedance end of the tank circuit using commercial ham high power plate chokes from National and others. These modifications are reported to work just fine in the ham bands, but it is almost certain that trouble would be encountered somewhere within the 1.5 and 20 mHz design range of the T-368 with this modification.

How far one might want to go is an individual decision, of course. I respect my friend Meir's position on modifying military equipment. I am probably inclined to go a bit further than he but I try to stick to easily reversable modifications that don't change the original character and/or performance of the gear. Where the T-368 is concerned let me pass along the following experience. I have two of these units and a few years ago I modified one to the extent of bypassing the clipper and filters in the speech amp and reducing the shunt capacity on the mod transformer as described TWO paragraphs above. I left the other unit stock and only reduced the clipping to the minimum setting. I then rigged up relays to permit me to switch between transmitters using a single D-104 microphone and the same antenna. On-the-air tests revealed no significant difference in audio quality between the two rigs, and both were judged by listeners to be good to excellent at least with my voice characteristics and under the band conditions at the time.

Bottom line: Get a good mic, back off on the clipping, leave the beast as-is otherwise and you can't go too far wrong.

I hope you find these thoughts useful.

Chuck,

Can't speak to the "E" and "F" models specifically, but a lot of drawer swapping apparently took place at the military depots.

For what it's worth, I have one unit that is made up of a "Basic" RF deck, an "A" modulator and a "C" power supply. My other T-3 has Government labels on all drawers identifying it as a "C", but the power supply is definitely an "A" model.

Dennis DuVAll, W7QHO

Good morning all:

I really need to start compiling TM's and "all other" information I can obtain for the T-3 (F) I just received from a good friend. Can someone point me in the right direction ? If someone has already put together a "library" for the E and F models, I would be more than happy to pay any time and expense involved in duplicating this or if information was sent to me, I could reproduce the material and make copies available to all who have an interest. I have the TM II-809-10, 809-35, and 809-20 already.

Thanks to all

Chuck

Hi guys,

According to the NIST, National Institute of Science and Technology, that has a website where they sell copies of military manuals, the T-368 is there, there is NO manual for the "F" model. Evidently they used the "E" manual as the changes weren't enough to warrant updating the manual.

I seriously don't think there is an "F" manual, I've been trying to find out when the "F"s were made, I don't think they were made for many years and the changes were few so they never updated the manual.

What's the date on your "F"?

Have not heard

# 53. NOISEY BLOWERS?

Yahoo group: T-368_BC-610
Date: 1999-09-05 20:34:01 UTC
From: Joe Foley
Topic: 53  Message: 53

HEY LIST,

I FIXED MY B-2 BLOWER so I don't have to yell as much!

First I put in new bearings, this actually quieted the blower some.

Next, I punched the hole in the back panel out to 4 1/2" with a
Greenlee knock punch (Electrician's tool). That lowered the pressure
at that point making more improvement.

Then I fashioned a turning vane (Ductwork type thing) to turn the
incoming air to hit the center of the blower wheel, this stopped the
"tinny" sound that could almost been mistaken for something vibrating
loose.

What was happening was the incoming air was loading the fan on one side
heavier than the other causing the blades to vibrate during rotation.

So, how loud is it now? Hmm,..... how to describe THAT?
Well,..... my window fan, on medium speed, is about that loud.
Its louder than the refrigerator, but not a lot. Not quite as loud as
one of those oil fired forced air furnaces.

Try it, you'll like it!

++++++++++++++++++++++++
So far we have two listers who don't use B-2, at all!

Evidently the BC-610's didn't even have blowers, so what'd they do kill
it over?

I've never gone that far but I did
> take the back off one of
> mine and ran it that way for a couple of years.
++++++++++++
Hmm,... one thing I like about the T-3 is that its completely enclosed,
one would really have to try to get on something hot.

> Worked fine, nice and cool.
> Had to bypass the back panel interlock switch, of
> course.
+++++++++++++++++
Speaking of which,..... I had to rewire three of mine as they had
charred wire connected to them, two were only connected by a few
strands! One of the mil-techs who changed the one on the RF deck cut
off some strands because it wouldn't fit the blocks, I had to drill out
three blocks to accomodate the wire size. Also pulled out all of the
big gobs of soldering wire that they used to jump them.

The power supply deck was bent in at the interlock and had to be
straightened, ...but they all work now!

> 
> Don't screw with the fan on the PA chassis.

From: Joe Foley
Topic: 57  Message: 57

Oh Oh,

Still testing! I found I have no modulation, CW works fine, Modulator Bias works, shows reading on Excitation Meter at idle. But with mike hooked up and Service Selector on AM I get no modualtion on the Excitation Meter.

The transmitter is hooked up to a Dummy Load with no antenna.

Manual points toward the 4-125's but I'm not convinced its that expensive. Any ideas before I tear it apart?

Speech amp maybe?

Thanks,

Joe

Update!!

Boy, those are cheap pots!

Both the Mike Gain and the 600 Ohm Line Gain crappped out, looks like some weather damage, had to drive them out of the panel, rust/corrosion.

Two bad 6C4's, one weak, one shorted, on the speech amp deck.

Now I gotta find two 25 K ohm pots.

Onward.............

## 63. Best Manual Source!!!

Yahoo group: T-368_BC-610
Date: 1999-09-09 21:25:51 UTC
From: Joe Foley
Topic: 63  Message: 63

If you've wondered why no manuals go through the DRMS auctions its because they're thrown in the garbage when deemed not needed or obsolete.

Some people aren't that prompt when cleaning out so they may still have manuals for the older equipment, ...you know, the stuff we use.

Well we can't have THAT!! We need to stop this.

If everyone cultivated contacts at their local military installations we could catch these things before they hit the "can"!

Kind of a mini-dumpster diving challenge.

GET THOSE MANUALS!!

Joe F.

Yeah!!! Somebody is hoarding!!! I say we find 'em and
'install' antenna sections till they agree to part with
the spares!

I still can't get over the guy that has *68* (+) R-390's!
And here I am - Oh to have but ONE (maybe two for diverse).
Oh yeah... And a couple for install in the 52 Panel.
(well KMG... That's only FOUR!!!)
Gonna have to find a smaller "T/RT-AM" for the veh set though.
Don't think 650# 368 in a 1/2 ton would be good idea :-/
Maybe a AN/VRC-2 ??? I seem to recall that designator,
and what was that unit that had the built in scope for
tuning the RATT signals ?!? Same vintage. Anyone know ?

Hello Chuck and all,
My T-368 is a B&W built "E" model (1962) that was overhauled
in Germany in August of 1974. It has the vacuum antenna relay and
the solid state rectifiers. I don't know what other differences there
were between the E and F, but I don't think there were many.
All decks are from the same contract.
BTW - I removed both noisy squirrel cage blowers and replaced
them with rotron type fans. I made a new plate for the bottom of
the PA compartment to preserve the original. It is all reversible if
needed. I even have a solid state motor speed control just laying
in the PS. It is very quite, but runs as cool as it did before. I have
been using this cooling system for about 2 years.

Topic: 69  Message: 70

Good morning Dave:

Thanks for the info. The placard on the RF deck reads:
"T-368 F/URT, serial # 260, TRW, N. Camden N.J., Order # 14527(E)".

Checked all 3 decks looking for something with a date code. Any suggestions
??

The most interesting thing is that the RF deck's chassis is made out of
copper plated steel. I mean it is BRIGHT copper. Were all series of the deck
made this way ?? As you can see, I'm new to the T-3 and am trying to obtain
as much info as possible

Thanks again and 73's

Chuck

Subject: [T-368_BC-610] T-368

From: David Humbertson <daveh@...>

Hello Chuck and all,
My T-368 is a B&W built "E" model (1962) that was overhauled
in Germany in August of 1974. It has the vacuum antenna relay and
the solid state rectifiers. I don't know what other differences there
were between the E and F, but I don't think there were many.
All decks are from the same contract.
BTW - I removed both noisy squirrel cage blowers and replaced
them with rotron type fans. I made a new plate for the bottom of
the PA compartment to preserve the original. It is all reversible if
needed. I even have a solid state motor speed control just laying
in the PS. It is very quite, but runs as cool as it did before. I have
been using this cooling system for about 2 years.

Chuck,

My old Basic and C model T368s both have the copper plated RF chassis. No longer bright, though, HI.

I have documentation up through E. Variations are all in the details - nothing comprable to the differences between the earliest and latest BC-610s for example. Hope to put out a rundown on the changes between models, Basic through E in the near future.

I would suspect your F model has ceramic vacuum caps in the PA output circuit?

Dennis, W7QHO

Joe,

In a message dated 99-09-14 20:38:26 EDT, you write:

<< Does your Basic have a 220 VAC power supply? >>

As mentioned in previous E-mail I don't have a "pure" basic model, only a hybrid that has a basic RF deck and a C model PS. However, both the Basic and A model power supplies had a high voltage plate xformer with a dual primary which could have been wired for 240 VAC operation. No provision was included in either the chassis or cabinet wiring to do this though. Also, the secondary voltage on these two early supplies was a bit lower than on later units, 5670 Vs. 6160 vct.

I've never had a problem working off 120 vac but have found that the T368 will occasionally kick breakers when keyed. Haven't doped this out completely, but it seems to be a function of the point on the AC cycle upon which the relay contacts in the plate supply primary close. In my previous QTH I was feeding the rig through a 30 amp breaker with a very short run to a 300 amp service, a very "stiff" source. On PTT I would occassionally kick BOTH breakers on the power supply. This happened from time to time with both my units. I am currently feeding my older unit through a 20 amp breaker at the end of a much longer feeder and I now trip THIS breaker from time to time but never the ones on the PS. Friends with T3s have given me similar reports. Does yours ever do this?

Long answer to a short question, but I hope you find the info. useful.

Dennis, W7QHO

# 77. RE: T-368 Audio suggestions.

Yahoo group: T-368_BC-610
Date: 1999-09-15 04:29:26 UTC
From: WF2U
Topic: 41  Message: 77

Hi Gene and gang,

I'm using the C-1123/GRC control box (documented in the GRC-26D manual). I bought it from Fair Radio about 6 years ago or so. I have the feeling they still may have them, although they haven't put them in the catalog for a few years. My original message should have said: "My T-368 is hooked up in the GRC-26D configuration, with the remote control box where the microphone is connected." instead of "....GRC-26A...." . This box enables you to switch between receiver A and B (originally R-390's, in my case it's 2 390A's) in receive, it has the UG-77 microphone connector, 600 ohm output from receiver A, B, or both, and RTTY input/output and telephone line remote PTT/key and audio. The cables out of it go to the T-3 remote jack in the back, and to the standby/receive relay control and the 600 ohm line output on the R-390A's. I'm not using the RTTY options.

I hope this bit of info helped you.

Best regards,

73, Meir WF2U

Meir,

A question, you mentioned that you are using a "control box" for ur
T-3...I've been wondering about that, and wonder what is the control box

nomenclature and is is specifically designed for the T-3. I have read references to "the control box" but can't find info on it?

Can u describe and where can I find such a critter?

73,

Gene

From: W7QHO@xxx.xxx
Topic: 78  Message: 78

Joe,

A bit more on the Basic and A model dual primary plate transformers. The Basic transformer primaries are tapped down for 117vac which is the connection which appears to have been used in production. The "top" end of the primary windings are not labled as to voltage on my drawings. Some schmeatics show this configuration in the A model power supply too, but others show a dual 115 vac primary without taps and a 6350vct secondary for the A.

All subsequent models, as far as I can determine, used a transformer with a single 115 vac primary and a 6160vct secondary.

Dennis, W7QHO

# 79. Still no modulation

Yahoo group: T-368_BC-610
Date: 1999-09-15 22:48:28 UTC
From: Joe Foley
Topic: 79  Message: 79

Well,

....I worked on the two pots on the mod deck and got one cleaned up so it would work, the other is beyond hope.

The mike works, checked all of the tubes except the12AT7, no information on that one, can't find any wiring problems.

I show a reading on the Excitation meter when in the MOD PLATE X 20 setting, and I can vary that setting with the MODULATION BIAS pot.

How to test the 12AT7? I remember someone mentioning a cross reference of some kind but that was on the R-390 list, I think.

Anyone have any ideas?

Thanks,

Joe

## 81. No Modulation

Yahoo group: T-368_BC-610
Date: 1999-09-18 02:17:24 UTC
From: Joe Foley
Topic: 57  Message: 81

Onward,

The resistance readings on the T-6 transformer are:

1 to 2 = infinite

1 to gnd = 70 K ohms

3 to gnd = 0 ohms

4 to gnd = infinite

5 to gnd = infinite

6 to gnd = infinite

4 to 5 = infinite

5 to 6 = 2.5 megohms

Doesn't look good, does it?

Can anyone varify these for me on a good transformer still in the
circuit? That is with the amp deck out of the mod deck.

Thanks,

Joe

++++++++++++++++++=
Frequency response would be the thing to match or improve. This one
only goes from 300 to 5 K cps., could be better without making the BW
too wide.

Anyone have any suggestions?

>
> Fair Radio may have some parts.

++++++++++++++++++++++++
Yup, I'lll call them Monday.

++++++++++++===
Chuck, you should specify male/female etc. as I see in one of the
pictures in the book there is one model that has a female on the deck
with a male on the cable. Mine's t'other way 'round.

>
> Many thanks,
>

++++++++++++++++++++++
I think it was in the 1 kilobuck range but the shipping would approach
that. Still I have someone in Iowa that saw one dumped in the mud a
few years ago, he thinks its still there. Don't worry, it'll be OK,
they'll take that kind of abuse.

++++++++++++++++++++==
Yes, I did continuity tests on the mod tubes, all
good, will do the wiring next. Just how does one
"test" a 4-125?

>

++++++++++++++++=
"Limited control"? Well I could vary it but its at
3/4 rotation to get 50 ma to show on the meter when
idling. I don't know what "normal" would be.

>
> Any luck finding a new transformer yet?
++++++++++++++++++++
Phil at Fair is looking. So far this is the only
"big" problem with this xmtr, but the modulation
circuit had bad components all over.

Hi guys,

The mystery surrounding the T-3 for sale by KG2IC in
Buffalo is now solved!!

ITS ON EBAY!!!!

http://cgi.ebay.com/aw-cgi/ebayISAPI.dll?ViewItem&Item=165539516

High bidder is K7SX.

This is a local unit for some of you. Its at $585
right now, which isn't a bad price.

Bruce's stuff is in good shape, too.

If you can stand auctions,

Joe

From: Mark Foltarz
Topic: 90  Message: 90

Gentlemen,

I am looking for a replacement power transformer
for my T-3. The plate suply xfmr has decided to leak
oil. Repair does not look really easy. So if a
replacement is available I would like to know where
and how much.

++++++++++++++++++++++++++
Replacement shouldn't be that tough, you'll need a 100 watt iron. Check the condition of the HV wires, they'll probably need changing, too, they're 30 to 40 years old, mine looked wheather checked, like old tires. That'll cut down the amount of unsoldering.

Call Phil at Fair Radio, I think they show that xmfr on their website in the "Featured Items" section under HV transformers.

## 93. Interlocks

Yahoo group: T-368_BC-610
Date: 1999-09-24 01:05:38 UTC
From: Joe Foley
Topic: 93  Message: 93

I got an Email from someone who is having trouble with the interlocks on a T-368.

Try checking their alignment first, I had to remove one shim to get one to line up right.

So far I've had to fix all but one of the interlocks on the T-3 I'm trying to get going. All of them had been jumpered by big gobs of soldering wire stuffed into the interlock.

The power supply drawer was bent inward 1/2" at the interlock and had to be hammered out, its straight now with no marks from the torture session. Two of the others had wires that heated to the point that the insulation was charred, the one on the RF deck is hard to see, I had to take it apart to see the charred point, the wire was only holding by three strands and wouldn't fit into the hole in the contact block (looked like the mil-tech that worked on it last cut some strands off to make it fit) so I drilled it out. The one on the Mod deck was the same way, needed to be drilled.

After putting everything together I put some of oxidation preventer that electricians use on aluminum connections into the interlock. So far the interlocks are the least of my problems. Actually they haven't been a problem yet.

Joe

Welp, it happened, the s-line came down the pike and I found a new rotor at a good price, now I don't have any money....so I need to sell a medium power xmitter
here is a good example...it's a BC-610H with the BC614-H. the cab in in good shape with a couple of scratches, I have the shockmount (removed) the inside is really
clean with no rust. I have the tuning units for 3.2-4 and 12-18 Mhz but lack the coil for the above freqs. all tubes are there but missing the cables so I haven't
fired it up...I'm offering it for $500.00 which is what I have into it..just don't want to cart it to Rochester if I don't have to..I also have a copy of the tech man
anyone interested??? 73

From: Joe Foley
Topic: 97  Message: 97

Hi,

Speaking of tube testers, Fair Radio has a bunch on
their website. I broke down and bought a TV-10 for
$150, they have ONE TV-7 that isn't listed on the
website but they want $260 for that one.

That's not so bad, though, two other sites wanted $550
for a TV-10!! Only problem was that they didn't have
any in stock.

# 98. Tube Hunting

Yahoo group: T-368_BC-610
Date: 1999-10-01 22:46:07 UTC
From: Joe Foley
Topic: 98  Message: 98

The results of my recent tube hunting expedition were pretty good!!

I tracked down as many old TV repair shops as I could in my rural county, bought out two for $60!!

One had a "Sam's Photo Fax" drawer full of new ones for $10. The other had three kitchen cabinet drawers full of new ones and five paper grocery bags full of used ones, some of them had been through a fire and had water damage to the boxes, but many are new. He said he'd want $50 for the lot with caddy boxes, he didn't think I'd go for that. So far I've gotten two good 6C4's a 12AT7, and six 6AG7's out of that pile, that's over $50 right there!

I haven't checked all of the furniture stores that carry TV's yet, but I'm getting there.

Most of the owners are glad to get rid of those old things. "Ten bucks, get 'em out of here!" "Well I'd want $50 for them...." "OK!"

But the ones that have Ham licenses or Internet connections want top dollar for them, go figure, $10 for one 6C4! Another one checked the Radio Shack prices before selling me a tube! Boy! They're high!

Joe

=====

# 99. Yeah! I just got me a URM-25/D!!

Yahoo group: T-368_BC-610
Date: 1999-10-02 23:52:22 UTC
From: Joe Foley
Topic: 99  Message: 99

Its a cool one, too, says RCAF on it! Serial number 4! It even works. Anyone have dial lights for it?

Now I can finish doing the alignment on my R-390 A.

Also found seven 6AG7's in the tube stash, that ought to keep it going for a while,.....hmm,.....no 6X4's though ,..... any trades?

I wasn't aware of its capabilities until I read the manual, I thought it was just a signal generator, but it does VTVM, audio generator at 400 and 1K Hz, and it'll crystal calibrate itself. That turret switch puts it in the same class with the R-390 A, but that's no surprise.

Oh boy,

Joe

Well, Brian,

I think you are missing something here.

In the first place, I treat everyone I come into contact with, or do business with, with the utmost courtesy and respect. I am friendly and outgoing. I like people and usually, if they have the time, take time to chat with them and listen to what they want to say.

The driver in this situation made a stupid mistake. He put my parcel in a special shed for garbage only, on top of the garbage, and didn't bother to leave a note. He broke several UPS rules regarding the delivery of packages. Treating drivers nice does not preclude them from doing dumb things.

I don't think for a moment that he did this to hurt me. I never gave him a reason to. He just used poor judgement.

I have received dozens of msgs detailing UPS horror stories. The consensus seems to be: Insist on signature shipments, use COD, or, pay $130.00 a year to get your stuff delivered to "Mailboxes" or equal.

If I thought it would help, I'd take my UPS guy out to dinner at least once a week. However, as someone once said, "Stupid is as stupid does" and all the steak in the world won't fix it.

Subject: [MilSurplus] re: BC-610-I pwr supply worth????

Greetings, de Eric KB8RJS no of Detroit.
I have recently acquired a BC-610-I transmitter high voltage (PA) power supply. Unit appears to be complete and in very good cond. I also have an original manual. I got it with a HB 4-1000 amp I just bought that was in need of a face lift. Due to it's size I wanted to get rid of the choke & Vac Rectifiers w/fil trans and mount the HV trans, oil caps, and new ss rect. & vari-ac on a much smaller chassis to fit in my 19" rack. Before I cannibalize this huge/heavy peice of mil-surplus, I was wondering if there was a market/value on this first? Have a BC-939-B ant tuner also avalible in fair cond. Any advice would be appreciated.

# 111. Excessive Quoting Rant - off topic

Yahoo group: T-368_BC-610
Date: 1999-10-15 07:18:55 UTC
From: Alan
Topic: 111  Message: 111

Hi All,
~
You know ?! I've been seeing a LOT of messages lately that have at least one - sometimes TWO complete 3 or four page messages quoted within them (and don't EVEN get me started on quoting these miltipage trailers 5 or six times over!). This practice doesn't happen in *ALL* of the lists, just in a LOT of them, and I don't have ANYthing against a l-o-n-g message, as some of you may hove noticed from time-to-time in my own posts :) But Come ON!!! And I'm speaking only to those that do this - you know who you are! If your client (that's the thingy you're reading this message with - no not your eyes smart*!) can't have the quoting shut off (or you just don't WANT to shut it off) at LEAST go through and manually delete as many lines as you can - especially the signatures (normally a client will place a formatted line at the top of the message saying who it's from, their eMail addy and sometimes the date, so there's no reason for some of these glutted sigs AND TRAILERS! to be quoted) before posting the reply. Better yet, IF your client will allow you to shut off the quoting, and your OS allows cut-n-paste (for all you windows maniacs out there), use THAT to copy a SMALL portion of the message, if needed, to keep the context accurate.

Ok... Let's have a show of hands... How many of you have taken the time to read 'Emily PostNews - Nettiquette' document(s) ?!? 1... 2... 3... Do I hear 4 ??? Hmmmm.. Not many! :( If you are NEW to posting on the internet or have just never read it - PLEASE! take time to read this simple document and modify your posts accordingly. Your list owner will thank you, the internet will thank you (uses MUCH less resources), the other readers in the list will thank you, and even your own HDD will thank you - as you won't be wasting a bunch of extra space to save this excessive quoting in your 'sentmail' folder/box/file (whatever).

Now.... Just watch some totally lame donkeybutt reply to THIS message and quote the whole dam(n) thing... 'Scuse me for sounding a bit miffed about all this, but not only am I getting DUPLICATES! of about every message that's posted in many of the lists (not all), but much of this is totally wasted space because it's unnecessary quoting (X2). <sigh>

<rant mode off>

I hope this off-topic won't get me kicked from lists, but as popeye might say, "I've stands all I can stands - I can't stands no mo!". Next step is to install a 'quote monitor' and start sending automated messages via direct eMail to those that quote over a certain percentage. Talk about using resources!!! If it's waste they send - then waste they'll get!
I might get REALLY nasty and attach some useless files to those.
I'm not a hacker (in the old definition), or a cracker (by the new one),

and I'm not really a jerk - just someone that's about fed up with those that don't seem to give a sh*t about the carp they spew into cyberspace. And "No" I don't feel it's my responsibility to "unsubscribe if I don't like it".

And I'm just waiting for some non-conformist selfish lazy SOB to reply to this message and inform me that I have no right!!! to tell him/her how to use THEIR computer, and they're going to continue their inconsiderate operations just to spite me... Oughta be worth a chuckle and a shake of the head, if nothing else. And to those uninformed souls that wonder why I don't just use my 'delete' key ? Jeeeze!!! Think about it for a sec!

B.A.

# 113. Thanks - I feel better now

From: Alan
Topic: 113  Message: 113

Glad to get that off my chest <whew!>
As I stated not ALL lists have this problem, and if I hit the ones that don't - I apologize. My course of action was to select the ones I KNEW had a fairly decent traffic level. I'm hoping that my post MIGHT negate a future problem from a new internet user that's subscribed at this time, or by one that takes the time to read the archives and see the post there.

I appreciate all the + comments, and would like to thank both Gerry Hull (for telling me to "get a life") and Sabbatai Zvi (for telling me to "grow up" and calling me a "NET COP") (not sure if that is a real name or the gender thereof. BOTH of which felt compelled to quote my complete message in their reply (lol) proving my point, but I must commend Gerry for doing so via private eMail and NOT to the list. Thank you Gerry.

And a sincere thank you to those list owners and moderators that took the time to drop me a line and comment on my post, consider your input appreciated and your wishes ack'ed and accepted.

Now that, that's done.. What were we discussing ?
I think it had something to do with radios, computers, or tty. Hi Hi

73 2 all - Alan

They seem to be hard to find, I think I got one of the
last ones available on the planet.

>
> Can you give me the input/output impedances of a
> T-6? Also the current, or,
> power requirement and physical size and I will try
> to find out if someone has
> one but doesn't know what it belongs to.
++++++++++++++++++++
OK, Thanks!

First line: "Level 17 DBM Max PRI DC 10 MA"

Next line: "Freq. Resp. +- 1 Db(?) 300 CPS - 5K CPS"

Next line: "350 Working Volts to GND"

Primary: 15,000 Z at 10 MA DC

Secondary: 60,000 Z

Physical size is 2" dia. X 2 1/2" high. Six terminals
on the bottom with four mounting screws. Core, as
taken out of the wax filled can, is 2" X 1 13/16 X
3/4" with hair-like wire windings.

I think matching the Freq Resp is the most important,
and probably hardest to match.

>
> I need the overload reset switch to get mine on the
> air.
++++++++++++++++
You're in the same boat with me. I happened to find
the exact replacement pots for the mike gain and the
600 ohm line gain for my T-3 in the Allied catalog.
After that its just one part left. I'm being VERY
patient!!

Would also like to
> replace the interlocks, which some friendly,
> overzealous chap removed. Could

> he perhaps, be a silent key now?
++++++++++++++++++++
Yeesh!!

I don't like the interlocks on the T-3, they seem to be good for a control circuit but these are carrying the current of several transformers. Seems they could have come up with something better. I've got mine working now but they had big gobs of solder in each one so someone had trouble with them.

Joe

++++++++++++++++
Well, that's what I need is a circuit. I could build
a chassis, I can do the sheetmetal work, its the plugs
I need so I can put it in the rig without modifing
everything.

>
> Speaking of xfmts, you couldn't find a wirse freq
> response if you tried,

++++++++++++++++=
But then that's why they used that one, that's all
they were using it for. They only wanted the most
neccessary freqs of the human voice. I have to be
careful not to get the BW too wide, though.

Use HI-FI, if
> you can find it. I think
> the real freq limiter will be your modulator.
> Probably the T-6 was in the

++++++++++==
Yes, it was.

My voice is very low, and comm.
> frequencies make it hard for
> me to modulate a rig. They always cut hi-freq
> response. I always punch
> through qrm and qrn better when I can increase high
> (treble) response.
++++++++++++
OK, some of that can be taken care of by mike choice,
too. Like the D-104? I've got a 1940's ribbon mike
that I'd like to determing the freq range of, where's
it work best?

# 116. T-368 Safety Interlock System

Yahoo group: T-368_BC-610
Date: 1999-10-16 02:12:12 UTC
From: W7QHO@xxx.xxx
Topic: 116  Message: 116

All

Responding to recent E-mail on this (and other) subjects, the T-368 interlock system can be a constant source of trouble. First line maintenance on a stock T-3 when the HV won't come on is to pull all the drawers out and slam them back into place. The back panel is also intelocked but this is not obvious unless one studies the circuit diagram very carefully or has had occasion to pull the back off at one time or another. So, a lot of guys including myself HAVE bypassed the interlock system which can be done very easily down in the power supply chassis.

This is not as foolhardy as it may seem. The T3 is completely inclosed and pulling the RF or Modulator drawers out far enough to get into trouble disconnects the HV anyway. Also, pulling the PS out actually shorts the HV to ground so one would have to go to some effort to get into trouble on a T3 even with the interlock bypassed. I would also add that anyone qualified to be to be working inside a HV system like this would never trust ANY interlock system for protection in any case.

Dennis, W7QHO

Dennis:

Have a beautiful "F" model T-3. The first order of business was to by-pass ALL of the interlocks. If there is ANY weak link in the design (other than HV potential on the bandswitch and the meter) these are certainly it. I don't have to worry about the liability aspect of getting sued if someone is injured or killed by coming across the HV. I'm not the manufacturer !! If someone has no experience working with high potential devices, best they leave the repair work to someone who does.

Well, that's my opinion.....but I may be wrong.

I just hope the change wasn't because they had already disposed of all of the subject items. I also hope this includes all of the related spare parts.

That being said maybe we should compile the NSN's for every part we're interested in.

Other radios should be included, too, as a door has just opened and we need to cram everything we can through it. Maybe we can save the rest of the T-368's.

From: BrRonK777@xxx.xxx
Topic: 120  Message: 120

Hi to all,

What I need is a couple of relays, one for antenna switching and one for switching between my BC-610 and Receiver. I could also use a new Plate relay and an overload reset pushbutton switch for the BC-610.

Also needed is a couple of knife switches spaced for 600 and 800 ohm open wire line. (please do not suggest Nebraska Surplus Sales). I would prefer ceramic bases, but, what have you got?

The relays should be 117 VAC DPDT with 20 amp contacts and wide open frames.

Tnx a lot Es 73,

Ron K -- W1ARS

What you're looking for are electric motor starters!

About NEMA #1.

You should be able to find them in ajunk yard that
handles industrial stuff.

# 124. DC-610 Remote installations. (SCR-499 et al)

Yahoo group: T-368_BC-610
Date: 1999-10-24 06:49:35 UTC
From: BrRonK777@xxx.xxx
Topic: 124  Message: 124

Hi, I'd like to hear from some Radio Techs familiar with remoting the BC-610 transmitter, which was the transmitter for either the SCR-299, mounted in a panel truck; SCR-399, truck mounted in an HO-17 housing unit; or, the SCR-499, which could be set up anywhere in the cabinetry provided.

How was it done? I know we were able to operate Break-in CW because of the long distance between transmitter/receiver, and their separate antennas.

I'd like to know what wires and cables were used for control. What kinds of antennas were usually used. I'm talking field operation and depot operation. Main base Vs out-bases.

Any help you can give me will be greatly appreciated.

73, Ron -- W1ARS

Hey Ron,

You NEED to get TM 11-280 Technical Manual for Radio Set
SCR-299/399/499. It covers operation and inter-connection of the all
the basic components when used as a Radio Set. You still need all the
specific equipment manuals. The TM 11-280 contains a schematic of
the various configurations and all interconnect cables.

I have been working on an SCR-299 quite a bit lately,
(2 years!!) and know that with the equipment supplied with the truck
remote operation is limited to CW only. I don't know if the SCR-399/499
has provision for remote PHONE operation or not. Either way all
variants are capable of full function remote operation provided
that a second operator remains in the truck/shelter or tent.

Remote operation is supported via a pair of EE-8's and
a junction box JB-69.

Dan N8ETQ Cleveland, Oh.

From: Joe Foley
Topic: 131  Message: 131

Hi list,

So far we have 31 members on this list.

That means we have a bunch of contacts. We have many who are looking for T-368's to buy. I'm looking for "T-6" for my speech amp, others are looking for coils for their BC-610's or other parts.

I've inquired with many dealers on the internet about parts and have found very little. I think we even bought out Fair Radio!

So,..... guys .....its time!! We have to send a hunting party to each of the four corners of the known world,..... fire up those Boatanchor Search and Recovery Vehicles and get out there!!!

But remember,.... a BC-610 and a T-368 weigh 3/4 of a ton, tell the XYL that's why we need the big trucks.

Also, the pots on my mod deck are bad, does anyone have the EXACT part number of both of them?

Thank you,

Joe KG2CI

PS. Bruce Howes just subscribed yesterday, his call sign is KG2IC. Just to add to the confusion. Hi, Bruce!!

Joe, and the T-3 Gange,

Yes the seach is on...and didn't realize that these big critters were going to be tough to support...! Guess most of us are watching for any

parts...hope the list grows so we can stay up to date on sources, and can exchange stuff to help each other out...

The big hunt is on...have a 3/4 ton Suburban with a very thirsty 454...nothing but BIG IRON here...Have truck, will rescue!

Hi Bruce...Glad ur on this list...enjoyed talking with u and on ur T-3 at the Batavia, NY Fest this summer...! I helped load ur critter back in the truck...after the fest closed down...Hope to do it all again next year...

73,

Gene

Guys,

First, welcome to Bruce.

It's certainly a good idea to beat the bushes for original parts sources, but we shouldn't hold our collective breath in anticipation of some vast, undiscovered hord coming to light any time soon. In the meantime, guys, perhaps the use of a few substitute parts and judicious modifications might be considered? I recognize the appeal and value of authenticity but my personal preference is to see the old stuff working and on the air.

Gang,

Looks like it's more than just two switches missing: it's the PA tuning and loading control knobs are missing together with the shafts and turns counters!
There is an ominous and ill-abiding implement on top of the T-3: a HAMMER! Was it used to torture or perhaps dismember the old girl?
Also, there must be a receiver hiding in there: a headset is plugged in to a jack which is NSTBT (Not Supposed To Be There!) on the modulator deck front panel, together with the NSTBT meter.

Let's see if the final bid goes to over $1000 ;-() .... SUCH A DEAL!!! (Hammer included!)

# 140. Possible Paint Source for T-368

Yahoo group: T-368_BC-610
Date: 1999-11-03 16:41:21 UTC
From: Hagan, Reid J
Topic: 140  Message: 140

As some members of the T-368 group may be contemplating a complete refurbishment of their "T-3's" which includes repainting, I would like to offer a possible avenue in the sometimes difficult search for a good paint source.
A month or so ago, I was able to acquire a very nice T-368 (locally) that was in very good shape cosmetically, with the exception of the edges of the P/S deck, which had become a bit ragged over the years from personnel dragging the beast in and out of the cabinet. I used Turtle Wax White Compound (which is mild) on the cabinet and, thus far, on the Modulator deck. I tested the compound on the white lettering of the Mod. deck and all worked out fine-it really cleans off the old grime and left intact all the silk screened (or painted-on white lettering). The results were great! I then used NuFinish polymer "wax" (in the orange bottle) on each unit and was amazed at the results. Everything done thus far looks great with a very nice dark gray patina.
The "H" frame and shock mounts looked in need of some attention. I painted the six shock mounts a dull bronze color and finished up with a clear coat of enamel on each. The search for a "correct" color of the gray paint proved formidable. Many colors and many shades are available, but it seemed that every one was just not "quite right".
After a lengthy search, I think that I have found a color that looks great on the T-3, is readily available, and is rather inexpensive. The "H" bracket turned out looking super, after using the paint. The spray paint can be found at Home Depot and is labeled under the name of "Painter's Touch" by Rust-Oleum. The color is "Dark Gray" with a color code of #1986. It retailed for $3.27 a can. The color is a very very close match to the aged original T-3 gray, with the slightest hint of a darker finish. The paint dries fast, seems very hard, and does not seem prone to scratches. Even if the color was a shade darker, it wouldn't affect my particular restoration, as the P/S deck is the lowest drawer and would be in a "lesser light" situation in my radio room, anyway.
I hope this offers some help to those members looking for an economical, but first class restoration.

Wishing the T-3
group well,

Reid W2HU

Well Ok,

The T-368 that just closed on "that auction page"
didn't make the guy's reserve, high bid was $300.

Wonder what the reserve was......

The PA was missing some parts, like the tuning and
loading counters, among others.

Obviously modified Mod deck and some extra holes in
the Power deck.

Hey, Phil,..... just how bad was it?

Joe

Here it is, get it while its HOT!!!!

Let us know how you make out!

If you looking for a BC-610I contact Vic Edmondson W4MYF at 850-971-5580. I spoke with him today and this transmitter is complete with tubes, tuning units and coils. No ant tuner or speech amplifier. He also has many other high power parts and would like to talk to those interested. He also states that if you send a two stamped SASE for a complete list of the things he's been collecting since 1941. His address is RT-1 Box 2599, Lee FL 32059 (TWO stamps on one envelope)

Maybe you can help the guy out and put some of that heavy metal to use.

Terry

++++++++++++++++++++
Great, so it was just a case of him not keeping up
with things. $305 sounds about right for the market
now considering the parts missing.

>
> It does look to be a nice clean unit. The only

> supply front panel.
++++++++++++++++++++
What's the extra meter on the Mod deck for?

What is the row of holes in the power supply deck for?

The rf deck is missing all the
> PA tank parts,
> the 4-250, and the 4-250 chimney and clamp.
++++++++++++++++++++++
What 4-250's?? T-368's don't use those, supposed to
be 4-125's. But why complain? Wait a minute!!
That's the 4-400 you're talking about!! Not a 4-250.

In all
> other respects,
> it appears to be complete and unmodified.
+++++++++++++++++
Can you tell if all of the modules are "F" modules?

What's the date of mfg? This was the one by Onieda
right? Is that Onieda, NY?

>
> The cabinet has a pair of shock mounts in each

> this is
> the first one of these I've had my hands on :-)
++++++++++++++++++++]
Oh Boy!! I went through this same process this
spring. Ed, KA3OTT, helped me out A LOT!!

VERY FIRST THING!! Get some manuals, you HAVE to have
them, they have the tuning charts in them for
adjusting the LOADING and TUNING caps.

Also, they have the pictures which is the best way to
determine which modules you have, except for one
illustration which has the older Mod deck listed as an
"E" model.

>
> Oneida Corporation...does not specify location. Tag
> does
> say T-368F/URT. I don't know how to tell if the
> modules
> are F units. Please coach me.
++++++++++++++++++=
Well, as the history goes, the Basic model was made in
the early '50's. The "A" through "D" models came
about before 1960, which leaves the "E" and "F" models
for the rest of history. We haven't actually found
the differences between the "E" and the "F" models,
.............. yet.

If the power supply deck has sealed relays its an "E"
or later.

If the Mod deck has K-9 behind the gain pots, its an
"E" or later.

If the cabinet has teflon wiring its a late '60's
cabinet and is an "E". If the tuning chart is on the
right side its probably an "E" or later. One problem
here is that the antenna relay has a different voltage
in the early cabinets than in the newer ones. BIG
PROBLEM HERE, becareful, their expensive.

>
> Duh, extra meter? Well, it is so neatly done it did
> not occur

> to me it was not original. It is a 150 vdc meter
> apparently
> wired to measure the modulator bias voltage.
++++++++++++++++++++++++
That sounds like a good one to have, but I'd check to see if the meter in the middle of the RF deck works in all three positions.

The
> knob just
> to the left of it is a switch to switch the meter in
> and out
> of the circuit.
++++++++++++++++++++=
Sounds like someone wanted to keep a close eye on the mod voltage.

There are also two phone jacks
> added...don't
> know what for yet but I'd guess that one is probably
> for a key.
+++++++++++++++++
Could be for monitoring the sidetone oscillator.

>
> There is also an extra toggle switch at the top of
> the power
> supply that I did not notice....I'll figure that one
> out later.
> What row of holes? Other than the toggle switch, ac
> outlet,
> and Amphenol connector, I don't see anything else.
++++++++++++++++++++
Well,... only using the one I have as the example, I see "something" on the top left corner and in a row going to the center.

> What kind of blower attaches to that round hole
> thingie on the
> rear of the cabinet?
++++++++++++++++
There should be a squirrel cage blower inside the unit, this is "B-2", the "jet engine" that cools the Filament Pot and the Mod tubes.

Ok, now we can start the muffin fan discussion. Some people don't use this fan at all and report no problems, bu-u-u-t,..... I think that if there's supposed to be a fan there, who am I to take it out, besides that FILAMENT pot gets real hot. Just got to figure out how to attach a cup holder on the front

panel.

First thing to do before starting this thing is to check the fan for the 4-400, these were used 24/7 for months and the fans usually need new bearings.

They're not hard to change, I pulled mine off with my fingers, might need a three jaw puller, push them back on with a deep socket and a bar clamp.

Glad to be able to help, that's why I started this list.

Joe

> along the rear of the chassis.
++++++++++++++++++++++
There should be NO relays on the back of the front
panel, that's a modification. Maybe military or some
one later. Better check that out and see what it
does, or is supposed to do.

I would guess that
> the cabinet
> is correct as the wiring appears to be Teflon and

From: W7QHO@xxx.xxx
Topic: 152  Message: 153

Phil,

Yes, the 25AV5 works FB but requires a modification in the exciter screen circuit. The 25AV5 requires a lower screen voltage than the 6000 and if you just plug it straight in it will work but will draw enough plate current to exceed the tube's dissipation rating. Also, the fixed bias provided for the 6000 is not enough to cut-off the 25AV5 on key-up with the original circuit, and prolonged use would probably burn out the original 6000 screen dropping resistor (R120) too.

What you do is replace R120 with a 15K, 10 watt resistor in series with a 25 K wirewound pot to ground, and feed the SG from the wiper. Adjusting the pot to give 30 ma. of plate current gets you 10 - 12 ma of grid drive on all bands. The pot can be mounted behind the front panel on the exciter unit as no readjustment is required between bands. My 25AV5 has been running 5 years now with no drop in output.

I have spare 6000s but tried this substitution out just to see how well the 25AV5 would work. At the time, the 6000 was VERY hard to find and quite expensive. There seem to be a lot more of them around now, but at around $25 each the effort required to use the 25AV5 ($5 last time I looked) is probably still worthwhile.

# 160. T368 exciter mod ??

Yahoo group: T-368_BC-610
Date: 1999-11-18 11:21:22 UTC
From: Phil Mills
Topic: 160  Message: 160

Joe,

I saved the posting about using the 25AV5 in place of the 6000 in the exciter deck. However, my exciter still has the 6000 in place so the added pot has to be for something else. Anyway, in the case of the 25AV5 mod, you adjust it once and forget it so there's no need for it to be on the front panel.

Does anyone know of an exciter mod that might add a pot to the front panel of the exciter?

thanks & 73,
Phil

Hello George,

Call Fair Radio at 419-227-6573 and ask for Dave. Give Dave
a list of what you want. He will ask you to call back later
so he can go search. This drill really works! I did it today
and got everything I was looking for at reasonable prices. For
example, I needed the twist lock plugs for the AC power. Local
electrical supply wanted $10 for one and $20 for the other.
Dave offered them for $8 each :-). I am now a firm believer...
call Fair Radio first then look elsewhere.

good luck, 73,
Phil

++++++++++++++++++++
Well,..... its like this..... I was
over the carpet, but the tube I pulled out of its
socket flipped like a football, out of my fingers, up
into the air, ...flew right at the woodstove.

I thought maybe it'll fall short and land in the much
softer woodpile, its Ironwood, of the Betula family,
not Maple, of the Acer family, much harder, with sharp
corners.

But no, ... it missed both and landed on the slate
tile, of the ROCK family. PCKSSHHT!!!!

The shards landed in the carpet!!

Someone was looking for 6F6's, I found two. They look
new, they're Tung-sol's, but they're in GE boxes.
They test real good, but then the note by the previous
owner said that they tested good on 11-13-62, too.

Found a tube caddy in an antique store in Sylvania,
Pa. Price? Don't ask, it wasn't that good. Oh,
well.

On-line tube data pages!!

www.triodeel.com/tubedata.htm

with an audio slant,..... oh well.

Tube testers on that auction page, what is it, O-boy?

Item # 217158420

A Weston 798 that's up to $12!!

An I-177 that sold for $102!!!

There are others, too.

Also a 10 amp variac that's only up to $9.

Joe

++++++++++++++++++++=
Well, Olaf,

We're in the same boat with you. We're not sure just exactly what the changes are. We haven't found a manual for the "F" model either.

So far the only change I'm aware of is the vacuum transmit/receive relay.

Part of the problem here is that the "E" model was made into the 1970's which didn't leave much time for the "F" to be produced before they quit making them all together.

Even the National Institute of Science and Technology, who has copies of all of the manuals available doesn't show the "F" model manual. They only go up to the "E" model.

Welcome to the list, we've got 33 subscribers now.

Hello Joe,

Please forgive me for correcting you in public but it is
NTIS which is "National Technical Information Service".
They charge $33 plus $5 handling and mailing in U.S. for
the depot maintenance manual....the only thing added is
schematic pages to cover the later models...all the rest is
the same as the manual that covers up to the "C" model.

Also, having just purchased a manual because I have
an "F", I can assure Olaf and others that you are correct in
that the manual only covers up to the "E" model. At my present
state of ignorance, working on my first T-368, I certainly
can't say what the differences are.

thanks & 73,
Phil

# 174. t-368 parts to sell/trade

Yahoo group: T-368_BC-610
Date: 1999-12-10 21:16:31 UTC
From: Phil Mills
Topic: 174  Message: 174

Hello all,

Unfortunately I've just paid too much for a parts unit. I'm trying to restore an "F" model and have just bought a plain early unit with no suffix just to get the vac variable gear drives, tank coils, and band switch. I'd hoped that the unit would provide me with front panels with less extra holes than my current ones but such was not to be :-(

Anyway, I have for sale or trade the following:

Plate xfmr (heavy)
Plate supply filter choke
4 mf 4 kv caps with mounting brackets
All the meters
Filament voltage rheostat
One power supply switch/circuit breaker
Rack handles
cabinet handles

I need the following and will be willing to pay cash as necessary:

Correct 4-400 filament xfmr for RF deck.
Both vacuum variables :-) (yes, I dream big!)

thanks & 73
Phil
W5BVB (proud? owner of a very EXPENSIVE :-) T-368F)

No problem!! I'm glad someone corrected me, I tried to get that one out quickly and didn't know what I was talking about. Thank you, There are those on this list that are more informed than I and I hope they will let us know if we get really far off. I've had my T-3 for the summer and haven't got it on the air yet. Too many other projects, like work and keeping a truck on the road. My 3/4 ton Chevy "T-3 Search and Recovery Vehicle" died, sucked a valve, and had to be replaced with the solid state version that being a 1986 Nissan pickup. A very able vehicle but doesn't have the heavy lift capabilities. Don't worry, though, the Chevy will live again!! # 176. Response to T-368 F schematic

Yahoo group: T-368_BC-610
Date: 1999-12-11 23:00:25 UTC
From: olaf@xxxxxx.xxx
Topic: 176  Message: 176

Hi everyone,
Tnx for the response to my T-368 F schematic query.Looks like we are all in the same boat,allright.---no schematic to be had.--
I got a lot of info from Russ,WB3FAU,which he passed along on the AM Bulletin Board and via E-mail.Here are his commments and some of my observations after allmost breaking my back,pulling the decks out,etc
.
1. Solid state plug-ins for the 3B28's.My rig is stenciled 1N2632.The plug-in rectifiers I have are marked S51301E,have an 'SI' Logo and 'made in the USA'.The T-5 Fil Transformer is still in place and I'm sure the 3B28's would just have to be plugged and work just fine.

2. A switch on the RF-chassis near the big cable plug,stenciled S-15,disables the VFO during receive.When 'ON',I could hear the VFO faintly in my receiver.

3. A Vacuum T-R Relay with a lot of wire running about (May be this bird flies without antenna if you leave the covers off,hi.)

4. A huge ceramic vacuum variable on the load side of the 'Pi' network.

5. The 5R4 rectifiers are 5R4WGB's instead of the 5R4WGA's.I don't know the difference,may be it has to do with the shape of the glass bulb,to accomodate the hold down ring.

My unit is tagged by TRW and is said to have come from Fair Radio a few years back.At the time it was still crated and had appearently been completely refurbished and up-dated by TRW. It looks like the RF-deck was completely exchanged and the Modulator and Power Supply decks and the cabinet were from older units and were refurbished.

I am still trying to to figure out how to safely mute my TS-940 ricebox which I want to use for receive.My X-mas came early this year and a 75A4 or the like has to wait a while,hi.

If anyone has some more 'dope' on this subject,please let us know!

Again,thanks for the response and a 'Merry X-mas'. de Olaf,KF4TP (ex DL9 OW)

Olaf,

In a message dated 99-12-11 18:01:08 EST, concerning your T368 F you write:
<<
2. A switch on the RF-chassis near the big cable plug,stenciled
S-15,disables the VFO during receive.When 'ON',I could hear the VFO faintly
in my receiver.
>>

I take this to mean that in one position of the switch the PTO runs continulously and in the other position the PTO only runs when the transmitter is keyed. This is interesting because my "C" model has what appears to be a field mod which turns on the PTO only when the xmtr is keyed. A four pole relay was substituted for the original 3 pole Slow Release relay (K9) down on the modulator chassis, and the regulated 150 v. for the PTO was routed through the additional set of contacts. No "bypass" switch, such as appears to have been included in your "F" model is in evidence, however. Is this the way the PTO muting was controlled in your "F"? This modification to my "C" does not appear in any of the original manuals or addendums.

It would appear that a lot of drawer swaping took place at the depots and elsewhere. My "C" has a power supply from an "A" model. I have another T3 made up of a "Basic" RF deck (the very first model), an "A" modulator chassis and a "C" power supply. The PTO runs continuously in this unit and can be heard, but only very faintly as you noted.

T368s of all vintages are fine rigs. I'm sure you'll enjoy yours.

73,

Dennis D. W7QHO, ex. DA1IN

I found four more 610 tuning units 48 and 49 and 2 50s $20 each shipped con US 73 Gary K?IMJ http://home.earthlink.net/~docky Heathkit Site

# 180. Latest tube hunt!!

Yahoo group: T-368_BC-610
Date: 1999-12-13 03:37:16 UTC
From: Joe Foley
Topic: 180  Message: 180

Had some time left after loading up at the electrical supplier so I went hunting in a city of about 50,000 people.

I asked at furniture stores and business equipment repair stores to see if they still had a stock of tubes from when they did service and repair on older equipment. They all said the same thing ".......nope, all of those guys are gone,.............. except Nick, if he's still around he'd be the guy to ask." Every place I went they all said the same name, "......... go see Nick".

Hmm,... you mean to tell me that in a town this big there's only one guy who did this stuff? Ok.

So I went to see Nick. I found him at his old furniture store, more grass than gravel in the parking lot, not much business these days. This guy's about 80, sharp as a tack, his wife still runs the furniture store, he farms, raises cows, etc. He's not an amateur radio operator. We talked for a while then we went to see the shop he used to run.

Wow! Its 100' long by 25' wide! Looks like he shut the lights off one day and never returned, left everything where it was. Racks and racks of Sam's books, put together they'd go for 75', four shelves high! Probably the same for the tube racks, caddies all over the place. Three benches for commercial radios, three more for TV's and stereos, the back room is the stock room and appliance repair room, another two benches upstairs for "walk-in" repairs.

He used to install and repair the radios for the police departments, hospitals, municipal departments, fire departments and so on for eight counties or more.

I'll have to visit him often, he knows things I need to learn, good guy, willing to teach, too.

Oops, I forgot to buy any tubes, we were too busy yackin'.

Go hunting, often! Never know what you'll find.

Joe

Gentelmen, Im still looking for a T-368. Will pay good money, for a good transmitter. Will pick up within 1000 or so of SLC UT. Dave K7SX

# 182. 4-400 chimneys

Yahoo group: T-368_BC-610
Date: 1999-12-21 22:08:46 UTC
From: Joe Foley
Topic: 182  Message: 182

Hey list!

I've finally found some T-368 parts!!

Fair Radio's got some chimneys for the 4-400 tubes.

$15 each bases included, used.

Ron says they've got about 5 in stock, that's not
many!!

So if you plan on smashing one, better stock up.

# 183. T-368 Antenna relay contact info

Yahoo group: T-368_BC-610
Date: 1999-12-21 23:52:16 UTC
From: mark.donaldson@xxxx.xxx
Topic: 183  Message: 183

Greetings to all,
I'm new to this list, but hope to be a regular participant.
I own a basic model (nonletter) T-368 SN#32 made by Barker and Williamson.
When I received it the spring contact on the PA deck, that connects the TX output to the antenna relay was missing.
I replaced this contact with a spare T-368 high voltage spring contact that I had.
My question is, is the spring contact that was originally used by the manufacturer on the PA for the RF output identical to the spring contact used for the high voltage connection?
If this is the case there seems to be an offset on my unit of about half the width of the contact.
I suspect that the original RF output spring contact was built with an offset in it, would someone take a peak in their T3 and let me know.

Also a suggestion that the members on this list do a role call and give us an idea of the version T3 they own, serial number, contract number, manufacturer, and any MWOs that were performed.
I notice the R-390 guys are doing this and it helps to track down the manufacturing history of these fine rigs, IMHO.

73s WA1QHQ

# 184. Re: T-3 RF output contact

Yahoo group: T-368_BC-610

From: w1nml@xxxx.xxx
Topic: 184  Message: 184

Hi Mark and List members,

No, the RF output spring contact is not the same as a high voltage contact. It has an off set built into it. When I got my T-3, F model about 5 years ago it was also missing this contact (among other things). I borrowed the contact from another T-3 owner, then went to a hobby shop and bought some brass stock. I fabricated one out of the brass material and it seems to work fine. Never did get it silver plated. Maybe you could try this idea.

Good luck !

# 185. Re: T-368 Antenna relay contact info

Yahoo group: T-368_BC-610
Date: 1999-12-22 22:24:39 UTC
From: W7QHO@xxx.xxx
Topic: 183  Message: 185

Mark,

Ah, another "Basic" model. Was beginning to think I had the only one. Mine is also a B&W serial #129. My rig has an "A" modulator deck and a "C" power supply, however.

The original antenna spring contact does have an offset, as my friend Lock pointed out, unlike the contacts used to bring HV into the PA chassis. However, it would apppear that the HV contacts should work just fine as a substitute. The mating shoe that goes off to the antenna relay would appear to have more than enough contact area to accommodate the slightly different geometry of the HV spring contact shape. I haven't tried it, but gather it's working for you.

Welcome to the group. I like your idea of a roll call of rigs and owners. I've described my T3s here before but to reiterate:

Dennis L. DuVall, W7QHO
Glendale, CA

I have two T-368s, both hybrids

#1 Basic RF Deck, B&W serial #129, A modulator, C power supply

#2 C RF Deck, Crosley-Avco serial #237; C modulator; A power supply

73,
Dennis

# 189. WOW! They actually DID it!!

Yahoo group: T-368_BC-610
Date: 1999-12-30 02:33:42 UTC
From: Joe Foley
Topic: 189  Message: 189

Hi,

After months of hunting for the right size and voltage of HV wire for the T-368 Zorchmeister, this after a few offers of nearly-the-right stuff ( thanks, guys, guess I'm picky), and giving up on the "so called" distributers, I called Dearborn Wire and Cable's number from their website and.... BEGGED FOR IT!!!

Yes! Shamelessly, .... at Christmas time, .... I begged!!

www.dearborn-cdt.com

The distributers wouldn't cut a piece from a roll, minimum 100' for over $500!!

Dearborn's sales people were very nice, they have a "male" computer answering the phone, rare, these days. I told the man I needed 10' pieces, he thought a minute while listening to my plaintive wails, then said he could let me have them as "samples" and he wouldn't argue over cost.

Now granted, HV wire isn't hard to find,.. .but the wire going from the plate transformer to the 3B28's is 10 gauge at 6 K VDC. Try asking someone for that sometime,.... you should see the reactions! " WHAT DO YOU WANT THAT FOR??!!" " What are you building this time, Joe, hmmm..."

The 16 gauge is fairly normal stuff but its still hard to find small quantities of it.

Yes, that's it, if you want to re-wire the power supply deck you'll need about 4' of #16 and 3' of #10. I was able to get 25 K VDC Silicone Rubber Style 3239 150 deg. C. That should do it, don't you think?

It'd be great if we could patronize people that are helpful like that but how do we get them to stock stuff in quantities we can buy?

Two pots, an antenna and its ready!!

Joe

Phil at Fair Radio says he is presently sold out of
ALL military tube testers.

Glad I got my TV/10D when I did, they're all gone,
too.

I'm still looking for an undented case, with top, for
it, though. Mine suffered "shipping and handling" by
the DRMS.

Anybody got one? Anywhere?

Thanks,

Joe

That's what I get for replacing it without thinking
about it!!

There's NO reason why this T-368 needs 10 gauge wire
on the 3B28's especially when the primary is fed with
14 gauge. It could have been 18.

NOW the question is:

WHHHYYY! did someone go to the trouble to put that in
there? It just barely fits!! DUH!! ( On me, too!)

Joe

# 195. Verification, please?

Yahoo group: T-368_BC-610
Date: 2000-01-04 02:09:56 UTC
From: Joe Foley
Topic: 195  Message: 195

Can someone look at page 20 of the -35 manual for the
T-368 and verify that if the 6C4 driver is shorted
from pin 1,5 to pin 7 that 125 mA will be drawn
through the primary of "T-6" causing a large voltage
to be induced in the secondary which could possibly
take out both if the primary lasted long enough.

Thanks,

Joe

I get about 52 ma. With a dead plate to cathode short in V15 you would have R46 (2400 ohms) in series with the primary of T6 (450 ohms) in series with R40 (2000 ohms) across 250 volts. The total resistance then is 4850 ohms which gives a current of 250/4850 = .0515 amp.

Is this enough to take out both the primary and the sec. of T6? Maybe if it ran that way long enough, but you would probably smoke R40 and R46 first as both would be dissapating more than 5 watts each. At the same time, only about a watt would be dissapated in the primary of T6.

That's how my "T-6" failed and so far the only problem
that I can find is the shorted 6C4.

Does that sound likely to you?

Thanks,

Joe

>Does that sound likely to you?

We've talked about this problem before. Possible, I guess but unlikely. What bothers me is the secondary being zorched too. Failure modes are hard to predict and explain, but guess I would still suspect some kind of a flashover/short on the 4-125 side of T6 sometime in the past. Enough power on that side of the circuit to do the kind of damage you've got there. Also, as you've mentioned, you don't know for sure if your speech amp is original.

# 199. AM-141(*)/MRC

Yahoo group: T-368_BC-610
Date: 2000-01-05 03:30:07 UTC
From: 903608
Topic: 199  Message: 199

Hello, I just learned of an AM-141 which is a RF amplifier used as a 2kw amp with the BC-610. As I understand it, This amp was used for CW emergency communications only. It seems to have been part of Radio Set AN/MRC-2(*). Does anyone have any information on these units ? I would like to find one if possable. I am still searching for a JB-70. ynx, Ron KC4UPO

# 200. AN/MRC-2

Yahoo group: T-368_BC-610
Date: 2000-01-05 06:55:17 UTC
From: W7QHO@xxx.xxx
Topic: 200  Message: 200

From TM 11-487A

The AN/MRC-2 was a high powered, mobile, radioteletypewriter station for division, army and corps levels and was used particularly in fluid stages of operations to replace normal fixed plant equipment for administative circuits. The complete set was entirely mobile, requiring three or four 2 1/2 ton 6X6 cargo trucks.

The transmitting shelter (HO-17) contained a BC-610E transmitter, an AN-141/MRC high powered amplifier, rectifier unit RA-63-C, an O-39/TRA-7 FSK exciter and an SCR-211 frequency meter. The system was designed primarily to transmit frequency shift teletypewriter signals. It could be used in emergencies for full power CW, or CW and AM voice using the BC-610 alone.

Output - 2 KW fsk and CW (see above), 1.5 - 18 mHz in 6 bands.

The system used BC-342s receivers modified for diversity reception. These caried the nomenclature OA-65/MRC-2.

Topic: 202  Message: 202

Hi

Fair Radios got a dipole center section on their
webpage called an "Il-4/GRA-4". Its in the products
section under antenna stuff.

Does it look like something you'd use for 400 watts?

What are you guys using?

Thanks,

Joe

This was on the AM Window BBS. This T-368 is located in Western New York state, near Buffalo. Send E-mail to Bruce. Too bad I don't have any money,...ARGH!

Joe

Posted by Bruce KG2IC on January 18, 19100 at 11:13:05:

I have my T368F transmitter for sale. This is the restored one that we used at several of the local hamfests. Complete with manual and spares. $1350

For sale also, a large number of T368 parts that I have been stockpiling over the past 3 years. Exciters, 6000 tubes, xformers, power supply deck, speech amps, relays, etc.

Reply via email kg2ic@...

Tnx!

Military Radio Collectors Group 2000 Meeting
---

The fifth annual meeting of the Military Radio Collectors Group (MRCG) will be held at Camp San Luis Obispo (CA) on Friday and Saturday, 5/6 May 2000.

Friday will be devoted to equipment setup, operating events and informal get-togethers at the NCO club and the adjacent RV area. Those wishing to set up and operate at the event may do so under their own calls. Suggested frequencies are 3885, 3970 and 7293 kHz for AM, 3996 and 7296 kHz for USB and 29.6 and 51.0 mHz for FM.

The swap meet starts Saturday at sunup in the parking area adjacent to the NCO club, and the formal program will begin at 0900. Speakers this year will address WW-2 Japanese and German equipment, pre WW-2 government radio intercept activities, and the newer generation of military radios now becoming available through surplus channels.

A BBQ lunch will be served at midday Saturday (as in previous years).

Throughout the meet numerous examples of vintage equipment will be in operation and on display.

For additional information contact Dennis DuVall, W7QHO, (818)240-7907, w7qho@..., or Hank Brown, W6DJX, (661)943-2027. As the meeting date approaches, look for additional announcements of general interest.

Does anyone have the exact gap measurement to be used in setting the spark gap setting on the T-3 Mod transformer? The manual doesn't seem to list it, or I am just missing it in my readings.

Also: Does anyone have a source for the external (male 9-pin) plug that mates up with the remote operation jack on the back of the T-3?

Thanks and
73,

Reid

# 215. T-368 transformer needed!

Yahoo group: T-368_BC-610
Date: 2000-02-06 17:18:45 UTC
From: Phil Mills
Topic: 215  Message: 215

I'm looking for T1 for the RF deck of my T-368. This is the filament transformer that provides 5 volts for the 4-400, 26.5 volts, and 6.3 volts for the exciter. While I can certainly cobble together 3 transformers to make this thing work, I would prefer to have an original transformer. If you have one you can part with, please e-mail me directly at plmills@....

thanks & 73,
Phil
W5BVB (ex AB5TH)

# 222. From the R-390 list archive 1998

Yahoo group: T-368_BC-610
Date: 2000-02-11 01:25:46 UTC
From: Joe Foley
Topic: 222  Message: 222

Just something to think about....

From: "Thomas A. Adams" <103360.2133@...>
Date: Sun, 15 Mar 1998 23:12:24 -0500
Subject: [R-390] PTOs for T-368 and T-195/GRC-19
Message-ID:
<199803152315_MC2-36CD-C9E1@...>

Greetings, Troops.

I recently came into the an deck from a T-368 (the
companion transmitter
for the R-390 / R-390A). Its Collins design pedigree
is abundantly obvious
to anyone who has ever seen the guts of an R-390!
<grin> When a power
supply and driver stage, a single 4-65A, are added (no
type 6000 tube; its
been replaced by a 6AU5), this thing should make an
excellent exciter for
the 4-1000A CW / AM transmitter I've been building,
off and on, for far too
long. The design of this thing should give a VERY
clean CW keying, what
with all the buffering, the grid block keying system,
and the fact that the
PTO itself isn't keyed.

Chirp??? What's that??? Never heard of it!!! <grin>

The electrical similarities between the T-368 and
T-195/GRC-19 PTO
assemblies are striking; except for the addition of a
simple grid block
keying circuit in the T-195 unit, they appear to be
identical PTOs.

Something occurred to me during the initial
examination of the T-368
exciter; we're seeing a lot of "second source",
non-Collins PTOs in the
R-390 / 390A receivers (Cosmos, Motorola, etc.). Has
anyone here ever seen
a second source PTO in a T-368 or T-195? This T-368
PTO I have is clearly a
Collins unit, as is the one in my T-195.

Also, a question for the T-368 owners / users out
there.

As you know, the top band of the exciter covers 12,000
- 20,000 KHz, even
tho the available PTO excitation covers 12,000 -
24,000 KHz. Has anybody
out there tried to realign or modify Z-105, Z-106, and
Z-110 to provide
excitation for the full 12 - 24 MHz range? If so, was
the attempt
successful?

Even tho the military (especially the Army) gets a bit
strange about the
traditional assignment of HF frequencies above 20 MHz
(dividing it into
overlapping bands assigned to FM use by armor,
infantry, and artillery
field sets), I really have a problem understanding the
wisdom of specifying
a design that cuts off 4 MHz of transmitter coverage
from the T-368.

73's,

Tom,
W9LBB

# 223. This list

Yahoo group: T-368_BC-610
Date: 2000-02-14 05:22:19 UTC
From: Joe Foley
Topic: 223  Message: 223

Sorry,

For some reason I didn't get any notices of new subscribers after the first of the year,..... lingering Y2K problem? Must be. Four guys were waiting, one since 1/7/00. Oops on my part, I should check more often.

Anyway there are 40 subscribers to this list now!!

So far there hasn't been any sign of any parts dealers for either transmitter, that's not good. Looks like we're it for now.

Even the auction sites don't have parts showing up very often, I'll post them when I find them. Hope someone snagged that BC-614 Speech Amp on E-bay, looked like a clean one. Also a mod transformer for a T-368, but its up to $60. Fair Radio still has the chimneys for the 4-400's with the bases. The list of addresses I sent out turned up empty with most being dead/old addressses, not even one return.

Later,

Joe

# 224. Tube tester adapters

Yahoo group: T-368_BC-610
Date: 2000-02-15 19:44:38 UTC
From: Joe Foley
Topic: 224  Message: 224

Hi,

I've got a tube socket adapter that looks like it is
to adapt loctals to octals, it has one wire extending
off the side with what looks like a plate cap. The
only identifying labels on it are "JFD 72 AG", can
anyone identify this thing? Any details?

I'm looking for an adapter for Compactrons to plug
into an octal socket, I'm told to look for a Hickok
CA-4, any sources? How many variations of Compactrons
are there? I have nine and twelve pin based ones.

I'd like to test them in a TV-10D/U.

Thanks,

Joe

Interesting, the offeror obviously intends this unit for the US audience. Is that what a BC-610H *really* looks like? The picture in my TM is of the BC-610I model and the front panel layout is notibly different. 73 de Jack -----Original Message----- From: Mark Foltarz To: t-368_bc-610@onelist.com Date: Friday, February 18, 2000 5:35 AM Subject: [T-368_BC-610] something of note onEeeeeebay >From: Mark Foltarz > >heh. > >http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?viewItem&item=263261465 > > >it must be oe of the "lightened" version of the BC610 >at only 250 lbs. Jack, Yes, it is what a BC-610H looks like.....except for what appears to be some kind of VFO dial added in the upper right corner of the front panel. Also, I suspect 400 pounds is closer on the weight. 73, Phil W5BVB Jack Taylor wrote: > > From: "Jack Taylor" > > Interesting, the offeror obviously intends this unit for the US > audience. > Is that what a BC-610H *really* looks like? Hey Guys, That tuner is needed to complete the "look" but it hides the view of the tantalum plate. At least on the E model. It doesn't look like the "new" ones had many "light ports" (read; cabinet ventilation) anyway. Just spent an enjoyable mid day on 40m with my "E". I'll upload a pix of it to my web page this weekend. http://www.ameritech.net/users/dharlan/dans.htm I have my CH-120-A and an SCR-299 MC-269-A with equipment's there now. It takes forever to load but worth a look if you are one of the 99.999997 percent of the population that never saw an MC-269-A with equipment's! Heh, Joe -

That's JonWeener, he's one of the regular epay used car/insurance salesman types. You get to know the ones who are looking to hook some unsuspecting fool with words like 'RARE' or 'L@@K' and all that other rubbish. Bad enough you can't offer something for sale for your 'reserve' price and be done with it, but to insult people's intelligence is rather sickening.

I've seen RARE Hallicrafters S-38's and S-40B's on there, too. ;)

# 240. T-368 Audio Modifications --

Yahoo group: T-368_BC-610
Date: 2000-02-25 13:39:40 UTC
From: Hagan, Reid J
Topic: 240  Message: 240

I was wondering if anyone on the reflector has had any in-depth experience in modifying the audio in the
T-368? I know that there was some activity on this thread during the early days of the T-368 reflector, but I am interested in hearing about some of the actual results that have been finalized since that time. I guess that some of the more daring modifications are those presented by N9FOY and WA1HLR, but I haven't seen anything that resembles a "Product Review" type of feedback on either mod. Is the "good microphone, no clipping, no FL1 & FL2" the best way to go? Coupling capacitor changeout hasn't gotten much press as far as I can tell by my internet searching. I know that there are purists that want to keep the radios completely stock and I respect that choice very much, but I also know that most mods are really reversible unless considerable "drilling and blasting" was administered in the process.

Another question worthy of pursuit is usage of the multi-pin jack on the lower rear as a source of audio input. Any experience here? I guess I should round-off this query with another question that relates to usage of an equalizer with the T-3 and how it should be fed/connected. I have access to a Symetrix 528E Voice Processor and would like any suggestions as how to best make connections.
If there are any suggestions, hints, or comments, I feel that they would be beneficial to the group and would certainly "liven-up" the reflector.
Thanks in advance for any information.

73,

Reid

> press as far as I can tell by my internet searching.
> I know that there are
> purists that want to keep the radios completely
> stock and I respect that
> choice very much, but I also know that most mods are
> really reversible
> unless considerable "drilling and blasting" was
> administered in the process.
++++++
So far mine has the D-104 mike, FL-1/FL-2 jumpers
installed. I put a switch in one of the mod deck
ventilation holes to switch from carbon mike to
crystal mike, its on the right side of the deck, I
took the wire off from the resistor, R-21, brought it
over to the switch, then put a bright red wire from
the switch to the resistor. That makes the mod easy
to identify and remove. No drilling, no blasting.

>
> Another question worthy of pursuit is usage of the
> multi-pin jack on the
> lower rear as a source of audio input.
++++++++
I'm wondering about getting the cable for that, does
it come with the control box, or is it a separate
cable? Fair Radio has the connector, but no cable.
The stub of cable coming out of the connector shows
sheilding on three of the pairs, looks expensive and
hard to imitate, ...BUT not impossible!

I've been wanting to concoct some sort of control box
with a speaker for the sidetone, mike/key input,
receiver disabling, and a foot switch for PTT. Just
so I could transfer those functions to a desk near the
transmitter. Of course that's after I GET THE THING
ON THE AIR!!

From: Jack Taylor
Topic: 245  Message: 245

Fellow enthousiasts, is there a site that details the development history of the BC-610s and T-368s? Something that gives overviews between the different models of each series? Also is there any restoration info available, such as tips and techniques on painting and lettering?

Are there anyone(s) in this group that has (or knows of) a source of parts for either version?

I've wondered about the distinction between "serious" and "cheap".
Interesting that this "serious" seller is using the cheapest ISP around :-)
Anyone on this list willing to pounce on these goodies?

Hello BC-6TON-E fans,

From a purely historical viewpoint, take a look at the neat
case this 342 is stuffed into. That case is NOT the CH-121
used with the SCR-399/499. Is that a mil 12vdc p.sup
in the upper right corner??? to cool...

Dan N8ETQ Cleveland, Oh.

Yo' Clive,

See my web page, I have been restoring and or reproducing
SCR-299,399,499 equipment till my fingers have bled. The term "BC-610"
is very vague, BC-610-?'s have been used in a variety of "radio sets",
most notably, the BC-610-A,B,C,D with the scr-299, the BC-610-E, with
the SCR-399/499, and the BC-610-I and later with the GRC-26 sets.
Least we forget the multitude of "interim" sets and the variants
of known sets! MRC sets come to mind as well. So you see Clive, the
term
BC-610-nothin' refers more to an era, than to a particular application.
The variant or "model" nomenclature will define the application, to
an extent. As with most of this stuff, the more you ask, the more you
wonder!

++++++++
Hi Steve,

Hmm,... in a registry I'd think you'd go by serial number and manufacturer. Date of manufacture may play a part, too.

But in light of the fact that very few of these are available as three decks of the same model/manufacturer/date of mfg. I'm wondering just how to do it.

The tag on the RF deck identifies the RF deck, the stamp on the back of the individual decks have contract number and manufacturer's code but no S/N.

Its not that easy to get three decks that will work together much less get a complete unit all made by the same contractor, of the same model/date of manufacture.

I like the idea of a registry, but lets face it, a lot of these are mongrel depot dogs. My decks seem to be from the same manufacturer, 06845, Bendix Aviation, probably 1967, can't be sure, but the cabinet is MFG. 05690 of someone's 1962 contract.

Let's see what the list says,

Joe

Joe,

Hmmmm, a bit of a challenge....My best looking T-3 is a Bendix Av...the Number two "T" is a B&W...haven't studied the decks to check for clues...and agree the mix and match for decks is true...have seen (before I knew what they were 8>( ) at least three maybe four, misc decks in flea markets and in a garage sale!!

If we have a tag, maybe by agreement, that becomes the currnt ID for the unit...plus list of anyother data as secondary description plus a note as to whether the rig is complete and working/non-working...

73,

Gene

++++++++++
I've gotta start going to those garage sales!

Please understand, I don't want to throw cold water on the idea, I'm just trying to figure out how to do it.

One thing this may do is help us to determine just what's out there. Maybe someone has a deck that someone else needs to complete their unit. More likely, someone's got a "basic" unit and can't find the power supply deck to go with it.

Hi Gang,

This is an estate item from a silent key. I'm helping his widow sell it.

FS: BC-610F +BC-614 Speech amp. Also includes HB speech amp and RF driver with BRAND NEW 250TH tube in the final and two BRAND NEW 2A3s in the rig. Has dow key relay and low pass filter and the little Collins VFO. Also includes D-104 mike. It has all new caps in the speech amp and PTT added. Also included is the Viking 122 VFO and it's Swan power supply. He used the Collins VFO on 160 meters and the Viking 122 VFO on 80 and 40 meters. I'm not too familiar with this equipment but it is in working condition. I witnessed it in operation shortly before the late owner passed away. It is all in good condition considering its age and sold as is. These are pickup only. I am located in central Iowa. Asking price is $875 and I will not separate the equipment. For an extra $100 I'll throw in two NOS 250s and two used 2A3s. You can reach me at 515-669-7501 from 08:00 to 19:00 Central time. Of course email is OK too. Thanks and 73,

Al

You had one, too?

So far I've determined that its a very slow leak. So
I have a plastic drip pan under it, left overnight the
wires are wet but no drips. The bad thing is that
this oil evaporates so its hard to determine how much
leaked, the transformer still sounds full. When I
took the power supply deck out to examine the seals I
left it sitting on the dolly with the panel down, that
put the HV posts up, and got NO leaking. So what I'm
thinking is that I will leave the deck out, on the
dolly, when not in use. Its an easy process to tip it
down on the dolly to remove it, gettin' good at it.

In other words, I'm going to leave it and look for
another transformer, use that for a spare until this
one get hot, or I find someone to rebuild it. I did
ask Peter Dahl Co. about that possibility. Sounds
like a common problem.

Joe,

Why don't you just re-mount your leaky critter with the terminals pointing up. Looks to me like there is enough clearance between the top of the plate transformer and the modulator chassis allow this. You would have to rig up a couple of hold-down straps but you're not bouncing around in combat so these wouldn't have to be too robust. You would only have to bring three wires up from underneath the chassis (AC and sec. center tap) and it would be a straight shot from the HV termianls over to the rectifier caps.

Another approach worth considering would be to apply epoxy glue around the suspect leak areas. Since the leak is apparently a gravity leak, there shouldn't be sufficient pressure to cause the glue to break loose, assuming a decent bond can be made.

The other concern would be whether the expoxy would withstand the high voltage potential OK. This could be checked with a megger, either in place, or on a test object.

++++++++++
But where'd he put it? I'd like to hear his
technique.

>
> Didn't need it at the time so I didn't pay attention
> but you might want
> to look at a good mechanics supply and see whats
> there.
++++++++++
When I worked at Bausch & Lomb the display carpenters,

top notch guys, liked to go watch them work just to learn, boy, they hated that,..... anyway, they used to make plexiglas parts for some of the trade show displays, they were VERY picky about the type of super glue they used, so, of course, I HAD to know why. Well,... (true name, here) Pasquale Piccinini finally gave in and showed me the technique, this could have radio uses, he took the pieces of plexiglas, clamped them together dry with small round spring clamps, looked like key rings, then he took this very thin glue, almost like water, and dumped it on the joint with a pint bottle that had a syringe needle on it, the capillary action quickly sucked the glue all the way into the joint, about two inches acrossed and eight inches long, this resulted in an invisible joint, no bubbles!

Now,..... I've also seen tractor mechanics trying to fix cracks in gear cases with everything you can name, the problem is that the oil can't be sufficiently cleaned out to get proper bonding to the metal. The last one was from an overtightened drain plug.

So, the brainstorm in progress is to find out how to get the oil out of the joint sufficiently to get the super glue into the joint,... that being IF that would even work. Any ideas?

>

+++++++
Well, yes, but I wanted to show that the secondary was center tapped.

>
> If you can send me a copy of the jpg he sent you
> showing what he's
> offering I'd like to see it.
++++++++
It was just a picture of the core itself, no good details, air cooled. I'm going to ask them if they can mount it on its side, then it would fit in the drawer. Also, they have no indication of where the taps are.

>
> tnx, Ott

>

++++++++++++
One good thing is that the oil seems to evaporate, so
maybe a clean surface won't be too hard to get.

>
> Tech strength isopropyl alcohol will work but does
> leave a film that will
> have to be removed too.
++++++++++=
Well, then it isn't that good for cleaning HV
insulators, is it? That's what I've been using it
for, I thought because it didn't leave a film.

>

> upside down or worse, paying a military price to
> Pete for non military
> iron, arghhh....
+++++++++
Of course, but its nice to have the thing available if
its needed. Also, If I replace one I'd want an air
cooled one.

Now, ... the thing I was thinking about is this.
Since this transmitter was designed to run for weeks
of continous transmitting, and since the average Ham
has a tough time finding 4 hours in a stretch to use
his radios. Do you think that this transformer would
be able to run without oil at all, if the outside can
were to be removed for cooling?

What kind of duty cycle could we assign it?

Dennis,

Have you heard of anyone reparing an oil filled? Probably a totally
goofy question, but someone filled it and sealed it...probably using
some heat...if the leak is not at the terminals...wonder if there's a
way to locate the leak, then reseal...??

Ur idea of turning up side down is a good one, and in amateur service,
heating may not be sufficient to "pump" oil out of leaky spot...

Sorry, more questions than solutions...

73,

Gene

++++++++++
I thought of that but I'm not sure how the core is "set" in the can. Could be that since the leak is at the HV posts that the core needs to be jarred down like it would if I took it for a ride in my deuce-and-a-half down a bumpy road like it did when it was in gov't service.

The top of the can is bolted and soldered on, there are two small disks soldered in place over fill and vent holes, those two depressions near the corners.

Oil is hard to seal, especially thin oil like this stuff. Putting the connections on the bottom probably wasn't the best idea. But I'm thinking the weight of the core is against the seals, turning it upside down may not be the best idea, the oil wouldn't be around the coils near the bottom of the can.

I was thinking about putting them on the side near the 3B28's, short HV wiring, the LV wires can be routed easily to the bottom. They could have done that originally instead of running the wiring through the deck twice in those little tiny holes. That's where mine was zorching. That's what started this whole thing!! Soldering the new wire in.

>

In a message dated 00-03-08 23:09:49 EST, you write:

<< But I'm thinking the weight of
the core is against the seals, turning it upside down
may not be the best idea, the oil wouldn't be around
the coils near the bottom of the can. >>

Can't imagine the weight of the core is resting on the insulator seals or that turning it over (or on it's side, etc) would lead to any electrical or thermal problems. I have a spare and there is no indication on it anywhere as to mounting restrictions. At the same time, there should be some way to seal a small leak. I noted some stuff in the auto store the other day that was supposed to be able to seal a running leak in a gas tank. Can you see where the oil is oozing out, i.e., through an insulator or around the base of one or somewhere else? If it's around one of the big cone jobs on the secondary it looks like these could be tightened up, at least on my trans. which is from an early model. You're probably going to have to pull the transformer off the chassis to get to the bottom of the problem if you haven't done so already. Nasty job - that's one heavy piece of iron.

++++++++++++
I'm not saying it rests only on the seals, just
partly.

I have a spare and there is no
> indication on it anywhere
> as to mounting restrictions.
++++++++++++
Does it show any means of keeping the core in place,
i.e. bolts through the bottom? I see nothing on the
sides.

At the same time,
> there should be some way to
> seal a small leak. I noted some stuff in the auto
> store the other day that
> was supposed to be able to seal a running leak in a
> gas tank. Can you see
> where the oil is oozing out, i.e., through an
> insulator or around the base of
> one or somewhere else?
+++++++++=
Yes, it shows as wet HV wires that goes up to the
solder connector but no further. That tells me that
the ooze is at the terminal where I soldered the new
HV wires on.

If it's around one of the
> big cone jobs on the
> secondary it looks like these could be tightened up,
> at least on my trans.
> which is from an early model.
+++++++++
On this one those look like a press fit, I don't see
any way to tighten them, they look good to me, its at
the bottom of the cones.

You're probably going
> to have to pull the
> transformer off the chassis to get to the bottom of

> the problem if you
> haven't done so already. Nasty job - that's one
> heavy piece of iron.
++++++++++
I can just turn the deck over to get to all I need on
this one.

Still trying to determine how bad the ooze is.

Thanks,

Joe

I have listed Tom W2KBW mint ART-13 Transmitter on Ebay.

Quite a package with plenty of spares.

ART-13 TRANSMITTER IN ALL IT'S WW-2 GLORY

Beautiful Condition inside and out. This transmitter is working perfectly.

Complete with ALL Power Supplies, Connectors, and ORIGINAL Operators Manual.
Extra Parts Include:

-2 Autotune Motors

-1 Mod Xfomer

-1 VFO Control Head (Autotune Mech.)

-4 Vaccum Switches

-1 Vaccum Relay Control Unit

-2 PA Plate Meters

-1 MCM-CFI Unit

-1 Low Frequency Oscillator Unit

-Misc. Milspec Connectors, Knobs, Etc.

Has been professionaly modified to accept line level audio input. Cooling
fans installed.

For Local Pickup Only, or Will Bring to Dayton Hamvention.

This is the closest that you will find to a new unit, looks like it just
came out of the box! Really!

> this...
++++++++
I've just been playing with that myself.

Pin "J" of "J 12", on the back of the T-3, is grounded through K-9, the "slow release" relay inside the T-3. Now,... in any good Amateur shack the receivers and transmitters are grounded together, right? So, since the "J" pin is grounded anything hooked to it should be grounded, too. Grounding Pin 9 of the R-390 A activates the BREAK IN circuit and nulls the receiver. If the BREAK IN switch is turned on!

I presently have a foot pedal hooked to short Pin 9 with ground at Pin 16 on the back of the R-390 A. You might want to do this as a learning experience so you can tell if all of the relays in the receiver work. You can familiarize yourself with the "BREAK IN" switch, too.

I don't like the idea of using the foot pedal while transmitting because bad coordination would blow the receiver.

Now,... consider tune up of the transmitter. You're going to zero beat on someone's signal with the receiver, or determine the frequency you're going to

use, then zero the transmitter to your receiver.
Notice that the T-3 has no crystal calibration
feature. Its to be compared to a receiver's frequency.

How ya gonna do that?

Well, you'll leave the NORMAL/TUNE switch on TUNE on
the T-3 and the BREAK IN off on the receiver so that
the tuner/exciter in the T-3 will slop over to zero
beat it to the receiver. Then, hopefully, you'll
remember to turn the BREAK IN switch on when you turn
the NORMAL/TUNE switch to TUNE on the T-3.

Of course, if you don't do that you blow your
receiver!!

Hey, list! Do I have this right?

Joe

++++++++++
No, you dork! You have to turn the NORMAL/TUNE switch
to "NORMAL" on that last line to get the T-3 to
transmit!

Actually, the best way to zero-beat is to turn off the HV breaker on the PS (the one on the right) and then key the transmitter. This turns on the PTO and exciter only, no sig goes out to the ant. In the "Tune" mode the T368 still puts out over 50 watts. There are a set of contacts in the T3 which can be used to mute a receiver such as the R390/390A and these can be accessed through the connector on the back of the machine as described in the previous E-mail. Audio can also be brought in and the transmitter can be keyed through this connector. Some users have reported hum problems in doing this but I have experienced no problems using shielded lines up to 20 ft. long. Careful grounding is important here.

Dennis and T-3 Guys...

Thanks for the info...was plowing through what documentation I have and found a schematic for the connector..J12..but didn't see much easy info on what contacts, if any were switched.

If I recall the R390x's and other Mil type rcvrs us the opposite metode of muting vs amateur stuff...so, to make systems compatible with other rcvrs in my station, am considering keying a relay for muting that can be selected for either mute on grounding or mute when open...depending on rcvr requirments.

Would like to mute all rcvrs running during operating session, regardless of which band they might be on, i.e., so they all go quiet when transmitting to avoid any nasty feed back or other gremilins.

Again, thanks for the clues...will be working up these details in the next few weeks...

Yeowweee! Gotta hurry! It's almost spring here in Ohio, and time to switch to antenna work...Gosh...just can's get enough of this stuff...now where's that ^)*&%^$ soldering gun...???

73,

Gene

Ok, so they don't make tubes anymore, except in those
places where they make big contributions to certain
American politicians.

If I go to my tube mine and see, for example a 12BY7A,
what book do I look that up in to see if I can stuff
it into anything I now have.

I don't want to sell them if I can use them, but if I
can't someone else might be able to.

I need a REVERSE substitution book.

Any ideas?

Thanks,

Joe

Hey Joe,

Hang on to those 12BY7's, there's 2 in a DX-100,

handy little jug. Seems to me that one of those

Anti-Q radio sites, like Phils old radio's had

an on-line sub guide. Pretty darn handy. Another approach

I use, is to look at the "Basing" colume in the aRrL
handbook for suitable "victims". That must be what
lead to that 12AX7,12Au7,12AT7 thing. HI

Dan N8ETQ Cleveland, oh.

+++++++++
So far, I know that Bendix Aviation, Barker and
Williamson, and Crosley made them.

> Is there a website for this info and I wonder
> about audio mods?
+++++++++
There are different webpages on the net that have
audio mods, some are simple, some are very extensive.
How deep ya wanna go?

The simplest are to jump the filters in the speech
amp, kill power to the carbon mike circuit and use a
D-104 mike.

I snagged this off from the "AM Window" bulletin board:

In Reply to: Re: re-tubing a BC 610 posted by HG goofing off at work on March 17, 19100 at 16:34:07:

The 3-500z works for the 250th with a small change in neutralizing capacitance. The plastic air system socket can be attached to the chassis. With a little fabrication you can mount this socket without driling any new holes. I suppose the regular ceramic socket would not be too hard to use either. I used this setup for a while and it worked FB. You should have some air on the bottom pins at least. I used an additional filament xfmr.
The 833 also makes a good replacement. I am currently using one. Logged many miles with it with no problems except for when a moth flew into the plate tank while on the air at the last Gaithersburg. I totally forgot to plug in the bias rectifier tube and we were flying on self bias until the moth started cooking. Brief removal of the B+ allowed the arcing to stop and things returned to normal. That plate was Orange plus though.
810's would make a great modulator tube replacement choice. You can still use the existing driver lashup. I am using triode connected 813's at almost zero bias. The driver needs to be outboard or really changed with this setup. The old junkbox 100 Watt stereo amp into backwards connected output xfmr works well, eliminating the quest for driver parts.
Look for tubes that can handle plenty of B+. The later 610 power supply can be configured for 4 voltage levels. The highest will be better than 2300 Volts depending on your line voltage and weather you solid state the rectifier.
73, D.C.

From: Bruce James Howes
Topic: 306  Message: 306

Click here for the Ebay Link -->
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=287044207

This is a very clean example of the TV2 tube tester. The TV2 is a top of the military tester which offers far more adjustments and measurements that the common TV7. Great for testing boatanchor and spare tubes. Can even test high voltage and some transmitting tubes!
I have had this unit since I was a teenager, but it has been stored for the last 15 years. Unit is very clean; both inside and on the case, showing no wear or damage aside form one slight ding on the bottom corner of the transport case.

Package comes complete with the original maintenance manual, and copy of detail service manual as show in the photo. The unit does seem to work, but the meter reads high. At this point I really don?t have a great for a tester so I have not tried to service it. All controls, switches and indicators are there and work. Tube roll chart seems to be the updated version. Great chance to own of one these rare and sought after testers.

Unit is located in Buffalo, NY, and buyer will be responsible for shipping costs, or local pickup.

Thank you.

# 307. Need BC-614 Connector

Yahoo group: T-368_BC-610

From: Mikhael Brown
Topic: 307  Message: 307

Any one know of a source for a microphone connector that fits the BC-614 dynamic mic connector? This would be 3 conductor female plug. A normal mic plug is a male type. Also anyone know why designed it the way they did?

Thanks and 73's

Mike

# 311. BC-614 mic connector?

Yahoo group: T-368_BC-610
Date: 2000-03-21 15:42:16 UTC
From: Mikhael Brown
Topic: 311  Message: 311

I had posted a WTB for a female 3 conductor mic connector to plug into the dynamic mic input on the BC-614 speech amp. I heard back from one individual that the dynamic mic connector on the BC-614 speech amp is a Female connector and the mic plug should be a male connector. My question now is, what sex should the dynamic mic connector be on the front panel of the BC-614 speech amp?

Thanks and 73's

From: Hagan, Reid J
Topic: 312  Message: 312

I remember (a few weeks ago) seeing a posting about a T-3 registry of some sort with some comments that resulted from the original request. I do know that some people don't like to list their Serial Numbers publicly, and as someone correctly stated, most of the T-368's have mis-matched decks and enclosures in the first place-only complicating the issue. I feel that a simple registry of T-3 owners (either by call letters or names or both) might suffice. It would provide all of us a "pool of talent" from which to acquire technical data, modifications, parts, or just common interests to talk about on the air. Food for thought......

Hey Mike,

On my BC-614-E Speech amp the Dynamic 3 pin conn.
is Female, The conn at the end of the T50 mic is Male.
I know for a fact that the BC-614-D and -C also require
a male plug at the end of the T50 cord. Good luck finding
one though, Took many hamfest trips to track one down for
myself. There is a similar 4 pin connector that both the
chassis mount side and the cord side are available. When
assembled you cant tell the difference.

Is there a 'gray market' in T-368 units? There was if not a registry, a survey of R-390A owners awhile back to gather contract and production run info. Would this not be useful for BC-610 and T-368s?

# 315. Re: [T-368_BC-610] T-368/URT Registry Comments

Yahoo group: T-368_BC-610
Date: 2000-03-21 23:32:57 UTC
From: W2ZR@aol.com
Topic: 314  Message: 315

Hi Gang,
I suggested a T-368 registry and said I'd be happy to collect the information for the use of the folks on the list. My reasons for having a registry were exactly the same as the ones expressed by Reid. If people dont want to publish their serial numbers (I've never understood that), that would be okay. I suppose, anyone who has registered their rig would get a copy of the entire list. Each time someone was added to or omitted from the list, everyone would receive an updated list.
Any comments or suggestions are welcome.

73,

# 318. T-368/URT Registry ---More Food for Thought---

Yahoo group: T-368_BC-610
Date: 2000-03-22 15:58:46 UTC
From: Hagan, Reid J
Topic: 318  Message: 318

Joe make's a good point-the T-368 Reflector might be the best place for berthing the registry. The main page could list the registry as a menu item, accessible by all members (or non-members) for information purposes. I think the point that Steve (W2ZR) makes, is that the registry should be in one place which is easily accessible by all. With Steve gracious volunteering to "do the footwork", I think the whole project might get off the ground with little trouble. The other reflectors, AM, military, etc. can be used for publicity, which can only make our group larger and more beneficial to us all.

Format and actual layout of the data can be determined, but maybe something like the following:

<Doe, John WX2XXX Trenton, NJ T-368 "D" Modifications such as..... etc.>

If set up properly, Excel format (or other), maybe a block could be provided to list mods, tips, unique audio used, problem areas, etc.

# 319. FS: T-368 HV Interlocks -New

Yahoo group: T-368_BC-610
Date: 2000-03-22 17:19:33 UTC
From: Bruce J. Howes KG2IC
Topic: 319  Message: 319

Hello gang,

I recently came across a small number of the infamous interlocks for the T-368, and some other miliatry gear. I say "infamous" for these beasts have become notorious for zorching out and causing all sorts of problems. I had jumped them out on several of my units as I could not located new parts.

However, I did come across some new ones. Again, these are new, not used, I unwrapped them myself from the milpac.

If I recall the T3 has four of these devils, one on each deck, and the last on the rear panel.

I am selling these as a kit of four as outlined below.

Each Includes:

- Black holder blocks and cover
- Spacers
- Two of the triangle contacts
- Large round male contact with the holder block

I am selling the set of four, as outlined above for $20, shipping included to CONUS.

I have a limited number of kits, if you are interested, please send off a email.

Tnx!

Sincerely,

Bruce James Howes

# 320. T368 Night -Watta U Think?

Yahoo group: T-368_BC-610
Date: 2000-03-22 18:28:19 UTC
From: Bruce J. Howes KG2IC
Topic: 320  Message: 320

Because of continuing commercial development near my home QTH, I am very soon about to lose the large free space that I had my 160 meter loop antenna.(like before the end of the month!)
Before I become piss weak on a vertical I wanted to give the T3 one last flail.

What does the group think about having a "T368 Night"? A nice roundtable discussion, with the ops all on T3s. The Collins group does this with the KW-1, and it draws a good crowd.

Rather than tie up the "AM Window" I would suggest that we use 3815, or 3837 MC.

Get back to me and will try to publicize and coordinate this.

Tnx!

Sincerely,

Bruce James Howes

# 325. T-368 Night Next Saturday April 1 at 8:30PM

Yahoo group: T-368_BC-610
Date: 2000-03-23 13:53:22 UTC
From: Bruce J. Howes KG2IC
Topic: 325  Message: 325

Wow,

Great response on the "T-368 Night"! Nearly a dozen thought it was a great idea, and more wanted to chime in but were not able due to the condition of their transmitters.

I picked a weekend rather than a weekday as some of us have comittements during the week. If the group thinks a weekday is better we can change it around.

How does this date and format work for everyone?

Date--> Saturday, April 1st (there is something about the selection of April Fool's Day for this event)
Time--> 8:30 PM EST
Freq:-->3.715 MC on your AM dial
Format--> Roundtable, hosted by yours truly. Check in giving your T3 model, and short story about how you came by the TX, and what you had to do to get it on the air. Also relate any mods, problems, or tech tips as you see fit.
Structure--> T-368 users, and those who own a T3 but don't have it up yet can also check in.
Fun-->On the 2nd go around: Vote for the Best Audio, Vote for the Most Strapping Signal, and Vote for the Most Pissweak
I'll do a summary of the results and post on WB3HUZ's AM Window.

Please send off your reply if this date and time works for you.

Sincerely,

Bruce James Howes

Hi Gang,
As has been discussed here recently, some of the list subscribers would like a registry of T-368 owners that would be available to all who participate. I am happy to act as the registrar.
It has been suggested that participants submit their call sign and any pertinent info such as model (e.g. T-368E), manufacturer, bands/modes used, etc. I will accept and log serial numbers if given but recognize that some folks dont like to share that info.
Anyone who'd like to send the info to me may do so immediately. Each time there is any change in the registry, I'll send a revised copy to all who participate.

73,
Steve W2ZR

Hi Steve and all,

I have no problems publishing my T-368 serial number.

Here it is: T-368E/URT, S/N 628, Barker&Williamson, Order 15117-PP-62. I got it from Fair Radio 8 years ago, came completely retubed and tested after depot overhaul (the depot tag was still on it). It's as issued, and cabled to the pair of R-390A's through the remote control/junction box for audio input and receiver selection as in the original GRC-26D configuration.
I use it mainly on 3885 on AM on the East-Coast Military Collectors' Net a. k. a. OMRN (Old Military Radio Net), with the M-29 microphone. Frankly I never used it on CW but I should really try...

Meir,

Very interested in your comment about the "control box" from ur T-368 to the R-390's...I've been trying to find some description and info that might put me on the trail of finding the 'box'...

What does it look like, and what nomenclature does ti carry...? Any idea where to find such a critter?

Have two T-3's on a B&W and the other a Bendix Aviation ... can list serials, but don't have them at the PC as I read the mail this PM...

Thanks for any info es 73,

Gene

# 334. T-368 T-6 Transformer

Yahoo group: T-368_BC-610
Date: 2000-03-25 02:26:51 UTC
From: Joe Foley
Topic: 334  Message: 334

Hi List,

I'm still working on my T-3 to get it on the air.

Today I got the replacement transformer from Antique Electronic Supply. Its much smaller than the original with thinner laminations. One list member already uses this transformer and reports a loud hum. Maybe he should swap the leads to take advantage of the polarity of the windings? Having heard that and having seen the label on the old one that said "This unit placed for minimum hum" I suspected a potential problem.

So I made a mount for the new transformer consisting of two 1/4" thick aluminum discs drilled and tapped to sandwitch the chassis when screwed together. I put RTV between the two discs for mechanical isolation and ran wire #3 to the top disc to maintain the ground. This resulted in no hum, but I still have no idea about what the signal sounds like.

The problem is that the modulation level isn't up to maximum, only about 140 mA. This could be because the input impedance is 10 K ohms instead of 15 K ohms like the original. Haven't checked farther than that yet.

I had to De-oxit the Modulation Level pot as it had a skippy spot right where I needed it to sit, much better now.

Ok, the dummy load's cooled off now, I can go play again.....

# 335. MRCG 2000

Yahoo group: T-368_BC-610
Date: 2000-03-25 19:35:48 UTC
From: w7qho@aol.com
Topic: 208  Message: 335

Reminder: Military Radio Collectors Group 2000 Meeting

The fifth annual meeting of the Military Radio Collectors Group (MRCG) will be held at Camp San Luis Obispo (CA) on Friday and Saturday, 5/6 May 2000.

Friday will be devoted to equipment setup, operating events and informal get-togethers at the NCO club and the adjacent RV area. Those wishing to set up and operate at the event may do so under their own calls. Suggested frequencies are 3885, 3970 and 7293 kHz for AM, 3996 and 7296 kHz for USB and 29.6 and 51.0 mHz for FM.

The swap meet starts Saturday at sunup in the parking area adjacent to the NCO club, and the formal program will begin at 0900. Speakers this year will address WW-2 Japanese and German equipment, pre WW-2 government radio intercept activities, and the newer generation of military radios now becoming available through surplus channels.

A BBQ lunch will be served at midday Saturday (as in previous years).

Throughout the meet numerous examples of vintage equipment will be in operation and on display.

For additional information contact Dennis DuVall, W7QHO, (818)240-7907, w7qho@..., or Hank Brown, W6DJX, (661)943-2027. As the meeting date approaches, look for additional announcements of general interest.

# 336. need manual for MD-239A/GR fsk modulator

From: plmills@attglobal.net
Topic: 336  Message: 336

Hello,

I need a manual for the MD-239A/GR fsk modulator that goes with the T-368 transmitter. I will buy outright, pay for a copy, or borrow manual to copy myself. Any help would be sincerely appreciated.

Also, can anyone tell me what fsk demodulator (receiving converter) might have been used in conjunction with the T-368 and R-390 or R390A setup?

thanks & 73,
Phil

Hi,
I've begun keeping a registry of T-368 transmitters. An up to date copy of the registry will be distributed to all those who participate. Just send me your call sign, manufacturer, contract number and serial number (optional). I'm sure all of the T-3 users would enjoy knowing something about the other ones out there. For those unfamiliar, there is a T-368 & BC-610 email list. If you'd care to subscribe, the address is in the header above. Thanks.

# 344. T3 Night Out

Yahoo group: T-368_BC-610
Date: 2000-04-01 17:59:02 UTC
From: Bruce James Howes
Topic: 344  Message: 344

Hello fellow Boatanchorites,

Don't Forget that tonight is "T3 NIGHT"!

Even if you don't have your transmitter up and going, you are still welcome to check and join the gang.

Here are the stats:

Date--> Saturday, April 1st

Time--> 8:30 PM EST

Freq:-->3.815 MC on your AM dial

Format--> Roundtable, hosted by yours truly. Check in giving your T3 model, and short story about how you came by the TX, and what you had to do to get it on the air. Also relate any mods, problems, or tech tips as you see fit.

Structure--> T-368 users, and those who own a T3 but don't have it up yet can also check in with their choice of TX.

Fun-->On the 2nd go around: Vote for the Best Audio, Vote for the Most Strapping Signal, and Vote for the Most Pissweak

I'll do a summary of the results and post on WB3HUZ's AM Window.

So I will see you there, April 1st, 8:30PM EST, on 3.815MC in the AM Mode for the 1st formal "T3 Night Out".

73 Bruce KG2IC

# 345. First Ever T-3 Net Report

Yahoo group: T-368_BC-610
Date: 2000-04-02 04:43:08 UTC
From: Joe Foley
Topic: 345  Message: 345

Hi List,

The First Ever T-3 Net was held tonight from 8:30 to 10:30. There were 6 check-ins during the net and one afterward.

KG2CI, Bruce, Net Control

KG2CI, Me

KA3OTT, Ott

W3NP, Dave

WB3FAU, Russ

WB2EMS, Kevin

With KB0HG, Bill, checking in after the net.

The discussion covered many aspects relating to operation, design, and restoral of the T-3's. The Interlocks and the B-2 Blowers were covered in detail with most having the same problems with the Interlocks, electrician's oxidation inhibitor goop being the best remedy, and many people either not using the B-2 fans at all or substituting muffin fans.

Band conditions were bad! Everyone was heard with some fading and the usual QRM, but the T-3's did a good job of clearing out any stray SSB'ers. Amazing how that happens!!

The audio quality was great on KG2CI's rig and on W3NP's, both levels to shoot for in attaing good audio quality. KA3OTT's audio was good, too, but at my location I couldn't hear him well, our antennas weren't pointed at each other.

I guess I had the best signal of all but I'm having modulation problems. That doesn't disappoint me at all, this is my first HF station and first experience on HF, Tuesday night actually. The T-3 performed very well for not having been used for probably 10 or more years. No problems encountered except the low modulation level. It was a rush to get it on the air for the net. The Inverted "V" antenna at 35' worked very well, which wasn't expected at all, it got out to

Colorado!! The T-storms in the midwest and the low mod level kept KB0HG from getting solid copy, but it got there!

There were several interesting stories about how everyone managed to get their T-3's and get them home, Bruce, I hope you heal up soon. Pick those power supply decks up carefully!!

A good time was had by all.

One question: Did anyone on the list listen in? Especially those who are waiting for T-3's to come up for sale.

Maybe next time I can monitor the E-mail and post responses on the air.

So far since I've been on the air I've found one ham in Michigan who has an R-390A with the SSB unit who doesn't have access to the Internet and wants information on the mods and how to troubleshoot and tune it. Another guy in Salem, Ohio who has a BIG collection of radios and hasn't ever heard of Fair Radio!! Too bad his transmitter crapped out while I was talking to him. He needs a T-3.

We can help these people!

Joe

# 347. T368 Night Results

Yahoo group: T-368_BC-610
Date: 2000-04-02 19:39:54 UTC
From: Bruce James Howes
Topic: 347  Message: 347

Here at the "Official" Results of the 1st ever T-368 night...

First the group convened on 3.815MC, but due to heavy SSB activity, and at the suggestion of Dave W3NP, we moved up band to 3.820MC. That frequency was clear for but a few minutes when some slop buckets (yes I use the term "slop buckets" for this inconsiderate SSB stations that QRM AM ops) decided to lay claim to the frequency. Undaunted the T3 group burned a hole right through, and despite the QRM and poor band conditions, had a super QSO with a duration of over 2 hours!

The discussion was structured as a brief introduction of the each operator, his T3, and where he got it from. We then went on to a discussion of each members audio chain, past crap outs and fixes, some tech tips, where to scrounge parts, etc.

I especially enjoyed hearing Dave W3NP expound on his T3 experiences, station layout, and modifications to the cooling system. I think the stock T3 cooling system generated more comments and mods than anything else.

It was one of my more enjoyable QSOs, and wonderful to hear all the T3s on, and I do thank all the guys stayed in despite the rough band conditions, I am sure that we made a lasting impression on the those doing the QRM. The plastic radio crowd found more than a match in the 700lb T368. I think it was Ott KA3OTT who best described the T3 as the "Harley Davidson" of transmitters!

My votes:

Most Strapping Signal: Russ WB3FAU -Good to hear you on again, I first met you with my old "F" model, always good to hear your friendly voice.

Best Audio: Dave W3NP -just like you were sitting in the room with me! Some great comments and observations as well!

Most Interesting Quote: Ott KA3OTT -see the Harley Davidson comment

Most Improved Signal/Audio: Kevin WB2EMS -Hey Kevin, the "new" T3 beats the old Icom 706 hands down! Bet it's more fun to operate too!

Special Thanks: Joe KG2CI -for your T3 reflector, without which it would have been tough to publicize the event!

That's it, let's do it again sometime!

# 350. Low Modulation Level

Yahoo group: T-368_BC-610
Date: 2000-04-03 22:08:29 UTC
From: Joe Foley
Topic: 350  Message: 350

Ok,

I made it through the shakedown cruise with only one problem. Low modulation.

I've checked the manual and found only remedies for no mod and excessive mod, evidently this one of those where they just replaced the whole transmitter.

I also found no routine for adjusting R-74 which seems to be associated with the line that feeds the MODULATION BIAS pot. All asssociated resistors test good near the Bias pot. I took the Bias pot apart and cleaned the contacts, they were dirty, but no improvement. Swapped the BNC cables going to the speech amp, no improvement. Cleaned and De-oxited all plugs and tubes, no improvement.

Maximum mod level is 180 Ma, 60 Ma at rest.

Questions: What's the voltage at the Bias pot supposed to be?

What's the voltage at the center tap of T-6 supposed to be?

How do I test a 4D21?

Any ideas?

Thanks,

Joe

# 351. T368 night results

Yahoo group: T-368_BC-610
Date: 2000-04-03 22:53:42 UTC
From: Kevin Feeney
Topic: 351  Message: 351

Hi All,

I thoroughly enjoyed the T3 night out, and especially getting to know some of the other operators with them on the air. I spent most of the qso listening and learning, the discussion on airflow was very interesting as I'd like to quiet down my unit also as it's a small noisy shack with it running the big blower. Warm too! :-)

Joe, very nice to hear you on and know you got it up and running after the trials you've encountered with it. Your signal was up there with the strongest of them, second only to Dave at my QTH. The audio was a bit more restricted than the others, you seemed to be missing some lows compared to the others, but it was very punchy and intelligible.

My votes are

Most Strapescent - Dave W3NP. I think everyone else was too close for really good propagation with the conditions Sataurday. I know I've heard Bruce with a considerably stronger signal on other days than he had that night. It seemed the further away, the stronger the signal.

Best Audio - Bruce KG2IC. Sounded just like you did when I saw you at Newark.

Best Topic - the cooling fans and various approaches to quieting things down. I think I'm going to pipe in a temperature probe into mine this week and see how warm things get with the stock cooling system so I'll have a reference when I start trying to run quieter fans.

Looking forward to doing this again soon. Maybe we should try it on 160 sometime too.

Kevin, WB2EMS

It was good to hear you, too bad we didn't go around
more times, but I'll get on more often now that its up
and running. Got to get a more dependable job to pay
for the electric bill, though.

I think you're right about the receivers being too
close, you, Bruce, and Dave are off the ends of my "V"
antenna so you probably didn't get the same effect
that OTT did, I think I blew his headset off. I
talked to KB0HG in Colorado after the net, he could
only copy 60% but the T-storms in the midwest were
real bad. I'm NOT disappointed.

Dave's signal was good (loud), his audio was great!
Gotta do that to mine.

I could hardly hear Russ, which is strange because
Erie's not that far away. Wonder which way he has his
antenna pointed.

I'd like to thank everyone for their support and help
in getting my T-3 running.

Joe

The list server that this list comes from has an
option to take surveys. They help the list members
know about the list members.

Is this important to you?

What do you want to know?

What questions would you like answered about the
members of this list?

What questions would you not want to answer?

Or should I stick my head back in the sand? Or better
yet in my T-3?

++++++++
Thanks, evidently I have plenty of carrier, now to get
the modulation to work right. The 4D21's look new.
I have no ideas on where to look, I haven't found
anything wrong yet! Got the mod deck on the bench
face down looking for ,..... ?

>
> The bias on the 4-125As should be approximately -175

> adjusted by means of the control on the front pamel
> of the modulator deck.
+++++++++
Yup, I understand that, where did you measure the
-175? What I want to determine is the level that I
should find on the terminals of the mod pot.

> My schematics identify this control as R25. (I
> can't find the R74 that you

+++++++++
I can only get 60 Ma at rest and maximum of 180 Ma
while yelling steadily.

>
> The 180 ma max. modulator current you mention, is

+++++++++

Haven't tried that yet. The scope I have here has no
display, it fades out when it warms up, recent
problem, probably caps. I'll have to dig the other
one out of the barn.

>
> How do you have your clipping control set?
++++++
Haven't set it yet, it shows no sign of clipping. The
first time I ran it was last week and haven't had time
to test on a totally working unit.

Not many participants out of 45 subscribers!

Hmm,.... AMF, Stromberg-Carlson, and Oneida,... I have more questions about the manufacturers and the contract numbers than about the radios. I already knew about B&W, Bendix and Crosley. I didn't think Crosley made radios that big.

You should see their site. Mr. Crosley was a clever man, he invented the proximity fuse, icy balls (not that kind!), he made cars, tracked vehicles, and refrigerators. His grandson is looking for items for the family museum in Cleveland, too.

This much is interesting, though.

# 360. DX-100 Parting Out

Yahoo group: T-368_BC-610
Date: 2000-04-05 15:38:19 UTC
From: Bruce J. Howes KG2IC
Topic: 360  Message: 360

I have a Heathkit DX-100 that I am in the process of parting out. (Believe me, far too rough to restore)

If you have a need, email it over and I will do my best to help you out.

Priorty will be given to those who have an actual need, rather than those "stockpiling" parts.

And guys, please be reasonable, don't offer me $3 for a mod transformer and expect me to reply. You will be responsbile for shipping costs from Buffalo NY, either UPS or FedEx.

The following items are spoken for:
-Meter
-Front Panel
-VFO Dial
-Knobs
-Cabinet

Thank You!
Sincerely,

Bruce James Howes KG2IC

# 362. tuning cards/ op manual/ BC-939

Yahoo group: T-368_BC-610
Date: 2000-04-05 20:34:09 UTC
From: Trevor Lewis
Topic: 362  Message: 362

Hello all; this is Trevor Lewis, KD1YT, in Vermont, new to this list, owner of a B&W T-368-E. It is generally in clean shape but needs some work to get it running 100%.

I am without the tuning cards and the operator's manual, and will need them before I can attempt to fire it up into a dummy load to see what I need to do to get the rig 100% functional.

I know I can get a repro of the op manual, but has anyone got an extra original that they'd consider parting with?

Has anyone got an extra set of tuning cards, perhaps from a parts rig?

Or does anyone have suggestions on where I might get either of those?

I also have an extra B-939 with a dented side and somewhat scruffy exterior but really pristine interior that I don't have much need for if someone is in need of one and we can work out something of mutual benefit

Thanks & 73.

Trevor,
I have never needed to use the tuning charts except maybe to get in
the ball park at first - never use them at all now.
With a 50 ohm load my settings are approx:
Freq Loading Tuning
3885 kc 11.2 9.1
7290 15.1 12.1
1885 17.4 12.8

Of course this will very somewhat between xmtrs and station
setups but should be close especially starting in the "tune"
position.

My manual is a copy of an older "C" model, don't have an
orginal either.

Hi Dave,

Which way did you have your antenna pointed on Net
Night? I'm North North East of you and you were LOUD
here.

My transmitter shows 11.7 for loading and 7.7 for
tuning but that's probably attributable to the gear
drive having been taken off and not realigned properly
when replaced. I can't tune mine by the book anyway,
if I load at the lower power "tune" setting they show
the plate meter goes off the scale when I switch to
normal. I load at 100 Ma on the plate meter then fine
tune it at full power.

Hi Joe,
My antenna is about 48' high and you are right off the end of it.
Usually a dipole thats much less than a 1/2 wavelength high (thats
about 120 feet on 75 meters) is pretty much a high angle omnidirectional
radiator - antenna orientation doesn't matter much.
Progagation, band condx, etc play a much bigger part. I think the
band was lengthening out as we talked and thats why Bill KD0HG was
so strong from colorado.

# 367. Modulation Escapades

Yahoo group: T-368_BC-610
Date: 2000-04-06 16:04:53 UTC
From: Joe Foley
Topic: 367  Message: 367

Ok so,......

When testing the voltage at the wiper of the Modulation Bias pot, I get -110 when at rest with the bias level set at 50 Ma. It goes to -104 when keyed, and can be set to -82 when the current is cranked to 130 Ma. The wiper is directly connected to the center tap of the T-6 transformer on the speech amp.

The M-29B carbon mike I'm using is new and has good clean contacts.

It seems to be the Bias pot itself that's having a problem. I took it apart twice and cleaned the contacts, the last time I noticed that the center movable slide contact has a very small contact point as shown by the wear marks, the stationary part of the contact has large even wear marks. It would seem that the movable contact isn't flat and isn't making good contact. Even after cleaning the needle on the meter still wobbles like its not making a good connection, this will stop by wiggling the knob. Any ideas on cleaning pots? I used De-oxit on it.

So far every pot on the mod deck front panel has been bad!!

Onward,.....

Joe

> your bias control. Guess
> I missunderstood your earlier E-mail.
++++++++
No, you read it right, what's going on here is that
I'm trying other things, too. What I've found is that
the Bias pot is dirty and not making good contact,
that caused the wiper voltage to be low. But its
still not right, the voltage has come up but it isn't
as stable as I think it should be.

I think its Ok and will work all right but I don't
want to trust it to be dependable.

> Just find a quiet spot and
> leave it there until you come up with a replacement.
+++++++++
Yes, I'm going to try that until something else pops

up.

At least we narrowed it down to a non-problem.

Interesting, this seems to be a high quality pot but it has a copper wiper contact on it, which I redressed because it was deformed, and the center moving contact could have been a better design.

I think it was a mostly a matter of cleaning contacts, I missed a few.

Friday night I'll try it again!! Be ready!

I'd do it Saturday night but I want to catch the Tim Tron show on WBCQ 7415 at 7:30.

# 369. Why those clever little buggers!!

Yahoo group: T-368_BC-610
Date: 2000-04-07 02:31:34 UTC
From: Joe Foley
Topic: 369  Message: 369

Ok,

Here's what I found!

The Modulation Bias pot has a copper wiper contact instead of a carbon one. Why? Well, they wanted it to wear a little.

That contact sits on a tit inside the holder so that it will rock when the wiper is turned in either direction. What that does is wear the contact to a point so it will stay on one wire turn and not several. In other words they wanted it to sharpen itself.

So if you're having problems with it staying on its setting its probably lost its point and needs to be run back and forth some.

Of course a carbon contact, which is harder, on a coarser winding wouldn't need to have such a sharp point.

++++++
-106 @ 60 Ma. All of these numbers to go into the
book for future comparisons just like all of the other
test numbers. Gives a good reference when trouble
arises.

>

> and it comes back in a minute.
++++++++
This one is a copper one, quite soft, too. The center contact was cruddy, black oxides of something, its at least shiny now.

>
> Bias pot is coarse wirewound... (filament is worse)
> big wires for what's

> differential is noticable as is the 4-125 current.
+++++++
The original filament pot on this unit had a BIG hole burned into the, well,... it blew the windings off in one place. That's been replaced. Thanks, Phil!!

> Your moving right along...
++++++
I'm going to say its good enough to play with for awhile,..... at least until it developes another problem.

Thanks,

73

# 374. Umm,..... uh,..... oopsie?

Yahoo group: T-368_BC-610
Date: 2000-04-09 02:29:51 UTC
From: Joe Foley
Topic: 374  Message: 374

I turned on the R-390 A on the 160 Metre band and all I got was a loud chainsaw sound. I checked out the radio and all of the antenna connections, no problems found.

Hmm,..... turned on the AM transistor radio could just barely hear the same sound, not quite sure. Got out the portable AM radio and listened, same barely audible chainsaw. Put it up to the breaker panel, no difference, turned on a light, the sound changed! Ah, now I'm getting somewhere. Its load sensitive. But where is it?

Outside to my service pole, no difference, whacked it with the butt end of my ax,... no difference,..... out to the road,..... no change until I put the radio 6" from the pole,.... real LOUD chainsaw noise! Walked up the hill to the next pole,..... quiet! Walked down the hill to the next pole on that side,.... quiet again!

Looked up at the transformer that only feeds my house,.... its got a "10" on the side of it. I just happen to know what that "10" means around here.

Its a 10 KVA transformer!!! At 240 volts that's 42 Amps! I've counted 13 houses and a two story store on a 15 KVA on this same utility company.

The T-3 is on a 30 Amp circuit, the transformer is 25+ years old, PTT hammers it regularly,.....

I think I toasted the bugger!!!

Or at least one of the connections, its not dead yet but my volt meter is pulsing back and forth about 2 volts with the noise on the radio.

Probably just as well I didn't use the T-3 this weekend.

# 381. "E" mdel speech amp questions

Yahoo group: T-368_BC-610
Date: 2000-04-12 00:01:51 UTC
From: Joe Foley
Topic: 381  Message: 381

Hi,

My "C" model schematics for the speech amp show L-11
and L-12 but my "E" model amp has 10 K ohm resistors
in their place, I also see T-11 in there. Otherwise
it follows the schematic (scream at it?) as expected.
My copy of the "E" model map missed the copier at that
point so I can't tell if its right or not.

Could someone please tell me if that's what's supposed
to be there or if this is a modification that needs
some other consideration. Could it be from an "F"
model?

The utility company came out and changed some of the
connections on the pole pig but the noises are still
there,.... tomorrow I get a new transformer, maybe.

Monday night I was told the transmitter was squealing
so I pulled the exciter deck and cleaned the band
switch and oiled the counter. But the squeal may be
the transformer noise.

Hey Joe,

It may be wise of you to check the internal
connections of your fuse or breaker panel. I blew the
the daylights out of mine (and apparently a portion
of the distribution system ) (the day before christmas)
while playing with my TRC 75 MG set. Still waiting
for the eyebrows though...

# 383. Ultrasonic Oscillations?

Yahoo group: T-368_BC-610
Date: 2000-04-12 03:19:39 UTC
From: Joe Foley
Topic: 383  Message: 383

Ok,

So just how does one determine if one's T-368 is going into osclillations?

I can't seem to be able to set the modulation bias at all now. While tuning it sounds fine until I raise the bias which will snap to its max of 130 mA when the pot passes about 60% of its travel, lowering the level causes it to drop to zero after a certain point. When its at the high point I hear several different tones in the receiver that zero beat at different frequencies. With no modulation I get one clean freq to zero beat.

I cleaned, aligned, and tightened the pickup shoe and cleaned and tightened several connections on the tank coil that were loose and/or tarnished.

No improvement so far,..... any ideas?

Thanks,

Joe

+++++++++
Well,..... I'd do that if I had one that worked.
That's too easy!

> A. Any difference if you're on an antenna Vs. on
> the dummy load?
+++++++++
Nope.

You could
> be getting RF feedback. I have one mic. that does
> this with my T3s.
+++++++++
This one has worked in the recent past. The mod
circuit is more suspect.

>
> B. Turn the microphone gain control on the front
> panel all the way CCW and
> see if this calms things down.
+++++++++
No effect either way.

BTW, what is the
> setting on the 600 ohm input
> gain control? Shud be all the way CCW too when
> you're not using that input.
++++++
Yet to be installed on this unit, the input on the
speech amp is open though, don't know if that would
make a difference or not.

>
> C. If the above doesn't help, pull the 6C4 (V15)
> out and see if that allows
> the bias to be adjusted normally and smothly (and

> etc.).
+++++++++
I pulled the 6C4 and it works like it should, I can
set the mod bias and it sends a clean signal.

What a surprise, it must be in the speech amp?

What we're trying to do here is localize the
> problem.
>
>
> Re. your earlier question on 10K resistors replacing

> work OK instead of the RF
> chokes earlier units had, and the old "A" model
> didn't have either, only a
> .001 cap to ground.
++++++++
Ok,.... I found this one. Its in a note on the
schematic, NOTE 4 says: In late "C" model
transmitters L11 and L12 are replaced by 10 K
resistors R76 and R77 respectively.

Still no mention of T11.

Thanks for the help,

73

> is to observe the tubes under modulation. Both
> plates should show the same
> color.
++++++++++++
These are Eimac's and have a vertically oriented can
inside which doesn't show any color in operation,
they're black/dark grey! All I show under modulation
is a thin blue light beam coming out near the top.
The metal part directly underneath this can shows a
scorch ring near the middle, its blue like a new shot
gun barrel.

Other than that they look clean, one has 6720 on it
and the other has 6830. If that's a date code they
may be OEM tubes and need to be bronzed and mounted
for some museum.

Any other ideas greatly appreciated.

You're good, OTT, real good!!

As it turns out, J4 on the speech amp deck was loose enough so that it didn't get a good ground. Just barely found it while checking grounds, didn't like some of the grounds, cleaned and tightened all of them. Read through your suggestions and see how many times you got close to that. You'd have had it in one more post.

I also grounded the input to the 600 ohm line, just like floating inputs on a PLC they can pick up crap.

Most of the suggestions I got said "bad component" but I couldn't trace anything without a scope and all of the components I could test were OK. So I went back to visual on the speech amp because I just didn't believe it was that complicated. I had to rule out anything simple.

I had it up and running tonight with N8ECR and KG2OK, they said I sounded like I was talking from the bottom of a big pipe. Long QSO, so I know I got the bugs out of it now!!

Great help, thanks!

# 387. Results of my T-3's operation

Yahoo group: T-368_BC-610
Date: 2000-04-15 05:01:40 UTC
From: Joe Foley
Topic: 387  Message: 387

I had the T-3 on the air tonight with good reports
from all stations worked, when you've got a T-3 you're
not pissweak!!

With the M-29B carbon mike and a stock speech amp it
has restricted audio, "hyellowy", in these parts. Some
said I sound like I'm in the bottom of a big pipe.
One asked if it was a SSB rig! Argh! The humiliation!
Mods may follow, got a hamfest D-104 waiting.

W3DUQ measured it at 70% modulation and made a
recording of it, didn't sound too bad, not bad at all.

So its up and working, much thanks to all involved, a
bunch of help was received. Especially from KA3OTT
and W7QHO.

Joe

# 391. Subject for discussion...

Yahoo group: T-368_BC-610
Date: 2000-04-17 03:38:29 UTC
From: Joe Foley
Topic: 391  Message: 391

Take a look at these two sites just to familiarize yourselves with the subject matter.

http://www.thebizlink.com/am/tech/htm/t368aud.htm

http://www.thebizling.com/am/tech/htm/t368.htm

The first is the schematic for modifications to the T-368 Speech Amp done by the Tim Tron "Guru of the air".

The second is his essay describing said mods with comments by Steve, WB3HUZ.

Trust me, there will be a quiz later,..... oh look,.... its starting already.....

1.) Can this mod be done without modifying the RF deck?

2.) In two places on the schematic it refers to "J5/Pin5". Can I assume that means "J5/P5"?

3.) Can I also assume that these are both inputs from the carbon mike? One directly to the amplifier section that is the 5814 V13(A), the other to provide bias (of some sort) to the second section of that same tube? This having bypassed the 12AT7 altogether.

4.) What's with the 5 one megohm resistors going from Pin 8 of the 5814 to the 4D21 Plate?

MOre to follow,..... hehehe

Joe

# 392. T368 - BC-610 CD available

Yahoo group: T-368_BC-610
Date: 2000-04-19 20:26:27 UTC
From: plmills@attglobal.net
Topic: 392  Message: 392

Hello,

I've finished scanning T-368 and BC-610 manuals and offer
a CD to the list with the manuals in Adobe .pdf format.
An install copy of the Adobe 4.05 Reader is included on
the CD for those who don't already have it. The CD is for
Windows 95/98 users. The contents are:

t368-dep-maint.pdf TM11-809-35, TO 31R2-2URT-134, Radio Transmitters
T368/URT....And Antenna Tuning Unit BC-939B
Field and Depot Maintenance. Has changes C1, C2,
C3, and C5 and covers through the T368E model.

t368-oper.pdf TM11-809-10, TO 31R2-2URT-121, Radio Transmitters
T368/URT Operator's Manual. With addenda to
cover T368 through T368E.

t368-org-maint.pdf TM11-809-20, TO 31R2-2URT-124, Organizational
Maintenance Radio Transmitters T368 through
T368C, with changes C1 and C4

TM11-850 Radio Receivers BC-312, BC-342, BC-314, and
BC-344 (multiple versions of each). Includes
schematics and troubleshooting information.

BC-348-J-N-Q.pdf Handbook of Maintenance Instructions for Radio
Receivers BC-348-J, BC-348-N and BC-348-Q,
79 pages plus schematics and diagrams.

BC-610-E-I.pdf TM11-826, TO 31R2-3SCR399-21, Radio Transmitters
BC-610-E,-F, -G, -H, -I and Radio Transmitter
T-213/GRC-26 and Antenna Tuning Units BC-939A
and -B, 150 plus pages including schematics
and changes C-1, C-5, and C-6.

BC-614.pdf TM11-5054, TO 16-40BC614-6, Speech Amplifier
BC-614-E,F,H, and I, 60 plus pages with schematics
and wiring diagrams.

me-165g.pdf TM11-6625-333-15, Standing Wave Ratio Power
Meter ME-165/G

urm-25d.pdf Navships 92134A, Instruction Book for RF Signal
Generator Set AN/URM-25D

If you would like a copy of this CD, please send $10 with your name and
address info
to me at:

Philip Mills
P.O. Box 1307
Friendswood, TX 77549-1307

Thanks,
Phil

# 393. BC-610 Coils at Fair Radio

Yahoo group: T-368_BC-610
Date: 2000-04-20 00:32:46 UTC
From: Joe Foley
Topic: 393  Message: 393

Their new catalog is out and on page 27 they show new
coils for the BC-610. C-447 $12. C-389A 4.5 to 5.7
Mc $8.

Hmm,..... no T-368 parts, though,.... oh well.

Joe, I beg to differ. They had the T-368 blower on
page 23 for a mere $20....ordered one for my derelict.
Now, all I need is the 1500 pf vac variable and the
RF deck T1 and I'll have a whole restored unit !! :-)

Hi list,

We just busted 50 members!!!

There are still a bunch of Ham operators that don't know about this list, they have computers but I met them on the radio.

Don't forget to post your information for the T-368 registry, all you have to do is post it here. We only have 11 listings so we have established no big trends. There are mostly "E" models with one "A" and one "D" and a few "F's". Someone out there said he had a Basic but I think it was a mongrel, that is it has decks from other models.

Has anyone taken advantage of the BC-610 coil advertisements I've posted? Should I continue doing that?

Just how rare are the big tubes for the BC-610's? The guys on the AM Window BBS posted several substitution schemes to help with that problem.

Don't know what happened to the BC-610 registry,.... HINT,..... HINT!

I yanked the front panel off from my mod deck and painted it today,... screwed it up, too. Who'd have guessed that the sun would be too hot? Oh well, at least its getting to be more the same color.

Joe

From: Mikhael Brown
Topic: 375  Message: 397

I will put together a BC-610 registry. Send me the following information any comments as to what you would like to see in it.

Name
Call
Model
order #
Serial #

Do you want to also have the speech amp and tuner included?

I will put everything in a Database and send (email) copies to everyone who is interested. Let me know what format you would like to receive it in.

Someone's using up the T-3 and BC-610 parts!!!!

Posted by KB2APE on April 21, 19100 at 12:27:10:

In Reply to: Which tube to use for my amp, help.
posted by AL - N7IOH on April 19, 19100 at 20:55:56:

: I would like to build an amp that will be driven
with about 25 watts AM & able to give max legal out
without working the tube to it's max. The amp will
also need to be able to work FM & SSB. I am only
interested in covering 75 - 10 meters maybe 6 meters
if possable. I was thinking of using the 4-1000A,but
don't know much about it. Looking for July 63 QST, has
an amp design using the 4-1000A tube. Any ideas?

The answer depends on what parts you can come up with.
If you were to ask on this B-board you could probably
come up with all that you need. A plate transformer
from a later BC610 (model F and up) or from a T368
would be a good start. The 610 is preferred because of
it's dual primary winding which can be connected for
240 Vac. A pair of T368 xfmrs would be the Ideal way
to go. Hook one across one 120 v side af the A.C.
mains and the other xfmr to the other side. Parallel
the secondarys. This lashup can be checked for proper
phase with a small center tapped filament xfmr. BTW
these transformers seem to have enough Hi-Pot to
handle a full wave bridge rectifier and produce
5-6kVolts with a choke input filter without zorching
the center tap. Many hV center tapped transformers
can't do this. If you can dig up an old 3 phase
variac, you can use two of the phases for each
primary. Also if using a choke input, the swinging
choke can be hooked into the negative lead thus
reducing it's Hi-pot requirement. This choke should be
mounted with the thought in mind that if it were to
open up and also short to it's case it would assume
full negative voltage. So don't use it as a foot
warmer, tuck it away somewhere.

You could skip the choke input and do with capacitive
input. You will have something in the 4kV range with
crummy regulation. This can be made to work but you
will have all of the drawbacks of higher B+ (parasitic
supression issues intensified) and less power

sensitivity relative to the 5-6kV that you will get
with a choke input full wave bridge across the full
secondary.

The 4-1000 would be a good tube to use for the job.
They are around at hamfests. They are over $400.00 new
but you don't need a new one. The best thing about
this tube is if you don't have enough gain in the amp
you can crank the plate voltage up all the way to 6kV
and above. At this level all you need to do is sneeze
on the grid. Layout and parasitic supression is very
important at that plate potential or the thing will
oscillate. A popular method is to simply tie the
screen grid to the control grid and operate cathode
driven A.K.A. grounded grid. A better (and more power
sensitive approach) is to operate cathode driven with
class B specified values of grid bias and screen
voltage. This adds complexity to the circuit but
eliminates the need for Zener bias at the filament
(cathode) xfmr center tap.

"Microwave" diode "bricks" from K2AW (see QST, not
anywhere on the internet) Are cheap and can be used in
the rectifier.

Another good choice is the 3-500z. These will work
well with a good stiff 2700 to 3000 volts but can work
with more HV with care. A pair or trio would do the
job for you. These are not too expensive (a little
over $100.00 a pop) from R.F. Parts inc. You can
purchase the plastic air system sockets or get surplus
4-400, 4-250 etc. sockets.
You WILL need at least some air on either of these
tube choices.

The coverage through 6 metres may be something that
you would want to forget about. This can be had but it
ain't easy.

Just some quick thoughts....

I was glad to see that another T-368 is "Air Worthy" as evidenced by Greg's (KX4R) posting. My question concerns contact information for Dixie Bearings that offers exact replacements for the RF blower's bearings. Could Greg, or anyone else, share this info with the group?

Thanks in advance,

Reid W2HU

Or some such thing,.....

Ron is looking for a cover for his BC-939, his doesn't fit. I'm looking for a cover for my TN-339/GR, mine doesn't fit either. The spring latches don't line up.

Can anyone do a history on these two? Mine is made by Oneida on Order #16498-PP-63 so it is the later version of the 939, at least it looks a lot like a 939.

What system was it used on? One of the shelter systems? Which one?

Was the 939 only used with the BC-610? Its shown in the T-368 manual. When did they quit making that one? Or did they use them at the same time?

What's the big difference between the two?

Ott, did you ever get the parts you needed for the one you were building?

... the Miami Relatives want to know!

To me this topic does warrent further information. According to the BC-610 manual, the BC-939A mates with BC-610 models prior to BC-610F and the BC-939B mates with BC-610F and later, including the AN/GRC-26 and the SCR series.

Far as I can tell, the schematics for both are the same, and would guess that the difference has to do with slight cosmetic changes and the packaging footprint. This would be consistent with the cover mismatches reported in subject msg.

Hello All,

The BC-939(*) was used with the SCR-399/499 and GRC series that
used the BC-610-E and later model TX's. For the SCR-299 which
came with BC-610-A, B, C and D they used a BC-729-A or BC-729-C.
The BC-729-(*) is the little bugger pictured in almost all
of the W.W.II Hallicrafters adds. It did not have a cover.
BC-610's prior to the "E" model were only rated and equipped
to go to 8 mc. The "E" model and the SCR-399/499 of course
would go all the way up to 18 mc. I cant see any difference
between BC-939 models either, maybe just the omission of the
wrinkle paint which they found difficult to DE-radiate after
Bikini ? My BC-939-A is a B&W unit, contract 2232-PHILA-45-07
that was refurbished at Tobyhanna(?) in '62 and of course has smooth
flat black paint.

The BC-729-(*) was a flimsy little thing who's chassis would
almost flex as one operated the loading coil crank. I can see
why they "upgraded" to the 939. Also on the 729 almost all
the RF parts were mounted on Ceramic pillars which to me seemed
rather under rated for the stress of operation let alone
mobile operation. I cant find my GRC-26-D manuals right now
but will look into it when I do.

Dan Harlan N8ETQ Cleveland Oh.

Subject: T-368

Hi, I was referred to your web site because I am trying to get information on my T-368 that I just became the owner of. You have a great site. The serial # on my unit is 18. I was wondering how many were made and if it would be better for the historical value of the unit to keep it stock rather than do the mods Iam reading about for better audio and such. Any comments you might have would be appreciated. I will be keeping this for my own use. Getting a XTMR like this is a dream come true for me and Iam looking for some guidance as to the best way to restore it. Thanks for your time. Best 73's Les, WB6DXR. lesterw@...

Surplus Sales of Nebraska has the full line of knobs for the T-368. They are listed under Raytheon Knob Family and, if you look in the catalog, you will see that the knobs have the correct "bi-angled" faces also. I purchased the two crank type knobs and they fit perfectly. The only difference from the originals is that the knobs are not polished and shiny black as my other knobs were. The new ones have more of a flat finish to them.

Hi Reid,

EHC lets you order matte or shiny knobs. SSN wanted
$15ea. for the crank knobs so I was wondering what
EHC's prices were. How much was a whole set from SSN?

Hi gang
What did we find doing a little spring cleaning today?
Aha.. extra to our needs... unaltered BC-610 crystals in the FT-171-B holders. Just got done checking to make sure they oscillate ok on the BC-610 here and they all A+. The only exception is I couldn't check the two lower frequency ones. If you don't like the frequencies get out the piece of plate glass and very fine polishing compound. Worked great for me!
What am I offered for these beauties??
Bill W2HYN ...w2hyn@...
1 each... 3510kc
2 each... 3550kc
2 each... 3570kc
1 each... 2282.5kc (not tested)

To those of us familiar with george and his sales practices, those prices are not at all surprising. What's surprising is that no one has yet bid! I mean, it's Epay!! ;)

I find this one rather humorous:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=321743050

This guy has a rig that has a broken bandswitch, needs electrolytics and who-knows-what-else, won't fix it but encourages whoever the high bidder is to consult the book, but has a reserve so high that 8 bids up to $175 haven't yet met it. No doubt because the book he quotes from rates the receiver as 'very scarce'.

Come to think of it, I think this is the same guy who offered to trade me a common Collins 270-G* speaker for a Hallicrafters SX-115.....

Heh, hard to believe some really think we could be so stupid.....an unfortunate reality of the world we live in, I s'pose.... ;)

# 424. List of manufacturers and contract numbers

Yahoo group: T-368_BC-610
Date: 2000-05-06 21:43:14 UTC
From: Joe Foley
Topic: 424  Message: 424

Hi list!

About a week ago a reader posted a request for information on manufacturers of T-368's, the basic model. He has informed me that he received no replies which usually means everyone was leaving it to someone who knew the information. What happens if no one knows is that everyone suspects that someone else answered and the request gets dropped in the bit bucket under the desk to be collectively forgotten.

So I'd like to raise the question again hoping that if anyone has some suggestions on where to look for this information they can direct us towards it and we can start the hunt.

So far the only webpages that concern the T-368 are KG2IC's, Bruce's, and Ott Kazott's.

Does anyone have a page that they could post the registry and the manufacturers list and contract numbers on?

Does anyone know of other information on the web concerning the T-368 and the BC-610?

Did anyone just get a nice T-368 from Michigan that they're not telling us about? C'mon....

73

Joe

Heavy mil. iron group,

This is really funny - he must be a sucker himself for what he paid for shipping from Germany - I just bought a Siemens E309a receiver from a surplus dealer in and shipping by second day air was $105 for the whole 112 LB crate! (As a side note, the Siemens receiver has a built-in tube tester that checks the condition of the tubes in operation....)

"From Germany comes the BEST TUBE TESTER ever made".....etc....." .....and $350 invested in express shipping from overseas."

I wonder whether some "audiophool" falls for the hype....
BTW a TV-7 is good 'nuff fer me!

From: n2bc@stny.rr.com
Topic: 433  Message: 433

Hello group, just starting to peruse T-368 serial number 42.

Have a need and a question.

The need: The counter on the load vac var is busted (tens digit not incrementing). Anybody have one?

The question: How does one determine the model? I haven't looked under the power supply or modulator decks yet (still recovering from moving it yesterday). RF deck has the serial number plate.

It does have the T/R relay, but have not found any MWO numbers recorded (stamped or plates, etc).

I have ordered the TM from NTIS, I suspect it will give me clues.

THX all, de N2BC Bill

++++++++++
You might want to call Fair on that, sounds like the pin that increments it is broken, could be that you just need a new wheel for it and it may be the same as the number wheels on other counters. Look for the manufacturer's name and number for comparison.

>
> The question: How does one determine the model?
++++++
The only way to be sure, that I know of, is to compare the decks with the pictures in the manual. The "C" manual has three different modulator decks illustrated, the contract dates are in the number of the picture. BUT, there's one picture that's wrong, its an earlier model that is used to illustrate the "C" model transmitter and its from, I think, the "A" model.

I
> haven't looked
> under the power supply or modulator decks yet (still
> recovering
> from moving it yesterday). RF deck has the serial
> number plate.
++++++++
The contract numbers are stamped on the right rear corner along with the manufacturer's number. Don't forget to make a "skateboard" for the bottom of the cabinet, it makes moving it a whole lot easi,..... well,... possible. I used 5" X 2" casters and a frame of 3" channel iron. I also use a dolly to drop the power supply deck onto when removing it, I just tip the deck face down onto the dolly. That puts it in

position to work on either the top or the bottom
without having to lift it repeatedly. I'm 6'3" and
weigh 200 Lbs and I don't lift it any more than I have
to.

From: Bill Coleman
Topic: 435  Message: 435

Per Joe's request following my earlier post...

Serial number 42 is from the KC2IC collection via WB2EMS. Neither Bruce or Kevin 'did' much to it.

Joe, thanks for the tips. It already has it's wheeled outrigger and a little transformer dolly I built years ago does a good job for the power supply deck.

I need to spend plenty of time looking around. Already found a couple small busted things - including the 5933/807 that got squished during it's move from EMS to here - the only tube in the whole thing missing it's hold down.

Scarest 'mods' are on the RF deck and the harness behind the mod deck. Couple wires soldered together and wrapped with long-ago petrified masking tape - oh, joy! Don't know any of the history pre-KG2IC, but there are plenty of markups on the diagrams. All pre-KG2IC.

Gameplan is to make it safe, get it running 'stock', re-wire the PA tank to take the B+ off the coil & bandswitch, then start some serious playing with the audio.

I don't expect it to see any real airtime until fall, but rest assured I'll be whining here for information!

Other goodies at N2BC: 74A-4 & KWS-1, 32V-2, R-390A, homebrew pair of 4-1000s (brag pix from prior to completion are here: http://www.angenent.org/W7IUV/amp-pix.htm ), and an RCA BTA-1 up in the garage undergoing a transformation to 160/75/and maybe 40. Oh yeah, there's a Kenwood something-or-other buried under the rubble on the op desk.

Most of my operating is CW, weekends I'll be on 10M AM with the 32V-2 and some ragchewin' on 15M SSB.

The's the T-3 story and the BC story as a bit of an intro to the list. I've enjoyed 'listening in' on here since it started up.

# 436. T-368/URT Power Cable

Yahoo group: T-368_BC-610
Date: 2000-05-10 15:28:25 UTC
From: Hagan, Reid J
Topic: 436  Message: 436

I remember reading someone's input on hard wiring #10 round cable into the back of a T-3. The procedure that was presented, detailed the use of standard hardware (like that used on power boxes) and gave the actual hardware sizes and types. I have tried to find this data on the web pages, but to no avail. Does anybody remember reading this and know where this was posted? As the original plug only accepts #12 wire (without wholesale modifications) and is now very hard to find, I would be interested in the heavier #10 wire method. The way I see it, why run #10 to the outlet and then weaken the chain with #12 from the wall to the unit? Any inputs will be greatly appreciated.

+++++++++
Hi Reid,

What I did was to use a 1 1/4" X 3/4" reducing bushing, this a plumbing item, held in place with a 1 1/4" electrician's steel conduit locknut, use the heavy steel nut as the diecast ones are way to weak to hold something like this. And, if you use a "sealing" locknut it will have a rubber gasket that will help to keep it from coming loose in the future.

Then use a kellem grip type strain relief to hold the 10/3 SO cord in the reducer. Inside the transmitter I butt spliced the cord conductors to the power wires that used to go to the receptacle.

In retrospect the only thing I might do differently would be to use a 90 degree kellem grip so the cord would drop more naturally to the floor when the transmitter is pushed against the wall.

Well this is not T-368 related but I have had a couple of modems fry before due to lightning and always found the problem to be the small fusible links or very low value resistors in series with the telephone input line. I think they put them in just for that purpose, to protect the modem. Of course now these are surface mount devices but it is easy enough to bypass them. You have nothing to loose to try. Not the same as working on a T-3 or a BC-610, HI. 73 - Mike

Joe and group -

I was inside of a garage last night picking up my [Ford] Ranger(after finding out it needs about $1200 work on the front end!)when a big ol' storm blew in. Right behind the shop is a softball field where I once played years back. About 2 or three years ago, a high school girl was struck and killed there during a game. A most unlikely place, down below a hill at the low point of town, tall buildings and trees around as well.

As I was standing there talking I heard a loud *SNICK* accompanied by a FLASH and loud *BOOM*. Made everyone jump a bit. Not sure where it hit, but it was close. I just find it odd that what would appear to be a protected area such as this seems to almost attract lightning.

The rumors are true - there really is no 'safe' place during a thunderstorm, as far as geography goes.

At least I was still fully clothed and not reading at the time. ;)

All,

Primary power requirements as measured on my Basic unit are as follows:

Line voltage - 120vac

Filaments & fans only - 4.5 amp.

Key-down exciter only - 5 amp.

Key-down 400 watts out - 15 amp.

Key-down modulate 100% with a steady whistle - 19 amp.

Based on this a flexible line cord with # 14 conductors would be sufficient to feed the beast according to my NEMA handbook. Number 12 would be more than sufficient, of course (this is what I use on my units) but # 10 conductors would be overkill unless one had an extremely long run. For example, I use a 100 ft extention cord with # 10 conductors for portable operation but this is to minimize voltage drop, not for maximum current carrying capacity. BTW, I haven't experienced any trouble finding #12 flexible line cord. I have also found that made-up extention cords are frequently cheaper than an equivalent length of wire "off the reel." Just cut the molded-on ends off if you want to use different connectors.

On my units I removed the original power receptacle (J14) and covered the hole with an aluminum plate. Drilled the center of this put in a rubber grommet and brought the 3-conductor line cord in through this opening. Secured the cord to the bottom of the cabinet with a cable clamp and spliced the input line-cord conductors to the original cabinet primary wiring with a couple of wire nuts. Connected the green wire to the cabinet, of course. I also added a permanent jumper on the back of J13 and put a cover plate over the front of this receptacle.

A 20 amp circuit is sufficient to supply the T368 and I run mine on such. However, these units do exhibit a certain pecularity on key-down. Depending on the point on the hysteresis loop the HV transformer was in at the instant of the previous key-up, and the exact point on the AC cycle at the instant of the next key-down the T3 can draw a high input current that will kick circuit breakers from time-to-time. Both my units exhibit this trick and I have heard many reports of the same phenomenon from other users. Which breaker goes depends on the particular installation. Back at my former QTH in MD I was feeding my units off a short run to a 400 amp input service through a 30 amp circuit breaker, i.e., a very "stiff" source. There the breakers on the front of the PS drawer (usually both) would kick on key-down every so often. Here in CA it's the 20 amp breaker on the wall of my shack that goes. A long run to the primary source can help here - a bit of line resistance will serve

to limit the peak current. I recently ran my "C" model in an RV park at the MRCG meet. I was at the end of the park and was using a 100 foot extention cord in addition (see above). The hookup only had a 20 amp breaker but this didn't trip once in two days of operaton (I was also feeding the rec. and a desk lamp off the same circuit).

++++++++++++++
Nope, Dennis, I'm not going to buy it.

That's cutting it too close. Any surge going from rest to key down could put it over 20 amps quickly which a magnetic breaker is best designed to take out. And I'd expect that there would be substantial surge with a plate transformer that big and going from 4.5 amps to 19 amps quickly. Or even 15 amps.

I'd expect it to take the circuit out more than it does in the case you described, especially if the line voltage is low, but it may not.

The NEC only allows an 80% loading on general use circuits. I haven't looked up dedicated circuits in years but its still too close to make me happy, I'd expect nuisance tripping at 20 amps.

My cord installation doesn't change anything on the transmitter, no holes drilled or filled. The reducing bushing fits the existing hole tightly.

Well, Joe, I'm not sure just what you "don't buy." Is it my measurements, wire size, breaker size, my observations based on running two of these things very successfully for the last 5 years under a variety of circumstamces or what?

Incidentally, the filament CB on the front of the PS drawer (which carries all the current into the unit) is rated at 20 amps and the plate power CB is rated at 15 amps. The designers of the equipment apparently thought this was sufficient.

Also, my line cord installation doesn't require drilling any extra holes in the cabinet either but duplication by others is strictly optional.

Hi Dennis,

I show the filament breaker at 25 amps and the Plate
power breaker at 20 amps for the "C" model and later.
That must be where the problem is. What schematic do
you have?

If you look at the "Differences between models" chart
on page 9 of the -10 manual it shows the plate
transformer drawing only 475 mA on the basic model
while the "A" and later draw 500 mA. Also, the
exciter plate transformer is larger on later models.
T-4 secondary current rating is one amp higher except
for the "A" model which is twice as much, at 6 amps!

So the current draw of the different models is
important to consider for input power circuit sizing.

Good thing we disagreed, I hadn't considered that.

I've got both but was talking about the Basic. Am aware of the differences in later models. Have one of each and haven't noticed any obvious differences in "trip-out" behavior between the two at least when operating at legal power levels (375 watts carrier). Also, suspect the delay curves on the T3 breakers are different than those used in residential service.

# 452. T-368 Parts Availability

We all know that spare parts for the T-3 are more and more difficult to find, but if one really "digs in" at hamfests, sometimes some good things can be found. I recently went to the Wrightstown 'fester in Pennsylvania and found 5,
T-3 knobs (not crank types) in a large box of knobs and buttons. I dug around and wound up with 5 good spares in great shape for the high total price of $2.00. I also uncovered a like new 0-500 MA meter for $1.00. This might be a rarity to some, but if you are willing to get down and root through the mess, rewards can and do present themselves!
My good friend Ott Kazott also found a few nice goodies that escaped my gimlet eye!

Keep
digging,

Reid W2HU

That's a good thought! To magnify this effort perhaps "we who need parts" should establish our needs here on the group so others could be on the lookout.

Subject: [T-368_BC-610] T-368 Parts Availability

We all know that spare parts for the T-3 are more and more difficult to find, but if one really "digs in" at hamfests, sometimes some good things can be found. I recently went to the Wrightstown 'fester in Pennsylvania and found 5,
T-3 knobs (not crank types) in a large box of knobs and buttons. I dug around and wound up with 5 good spares in great shape for the high total price of $2.00. I also uncovered a like new 0-500 MA meter for $1.00. This might be a rarity to some, but if you are willing to get down and root through the mess, rewards can and do present themselves!
My good friend Ott Kazott also found a few nice goodies that escaped my gimlet eye!

Keep
digging,

Reid W2HU

Don't get too excited the opening bid for the T-3 is
$1500. No pictures! Its near Dayton, too. He won't
ship.

# 455. Hickok roll chart tension

Yahoo group: T-368_BC-610
Date: 2000-05-13 01:18:17 UTC
From: Joel Cumberland
Topic: 455  Message: 455

Hello men.

Does anyone have any good methods of getting the roll chart in a tube tester {Hickok in this case} to turn smoothly? Mine was really loose and tended to bunch up so I cut the tape on one end and pulled the paper completely off and rewound it tighter. Now it is loose in the middle {and cocked} and binds on the ends! Before I make matters worse I thought I would ask the group.
Thanks.

Yep, $400 is what I paid for my F model about 10 years ago. It was in real bad shape. I had to essentially rebuild it. Even took out the old wiring harness and replaced it. Also re-painted the whole cabinet and front panels. It looks like a beauty now. Sounds great also using an RCA ribbon velocity mike. 73 - Mike

Mike -

Which RCA velocity are you using with it? I have a few of the old 74's(I think), referred to as the '44 Jr.', I wonder if one of these would mate up well after doing some audio mods?

Of course, I still need the T-3.....I know, the likelihood of finding a $400 is probably less than what it was a few years ago, but they're still out there. I live in eternal hope. Hey, I have no choice - I can't afford the $1500 collector-models. ;)

# 462. $1500

Yahoo group: T-368_BC-610
Date: 2000-05-17 19:44:51 UTC
From: Joe Foley
Topic: 462  Message: 462

Ok,.... so that's a bit much to pay for a T-3.

I don't think the guy understands how the auction thing works, the way he did it turned it into just another sale,..... or no-sale.

He left no opportunity to make a lower counter offer, or to let the "market", such as it is, set the price. If he'd made $1500 his reserve he still wouldn't have to let it go if he didn't get his expected price, but he would have been able to tell how far off his expectations were. Did anybody on the list E-mail him to find out about this unit? I deleted his E-mail address and can't find it again on the E-bay site.

Too bad, he could have made a better presentation. Oh well, maybe he'll list it again.

I agree, Joe -

One thing I've found, though - more often than not, when someone has a high price like that, they think they have a retirement account, '@@RARE@@' collector's item, or such. I've been sucessful in buying many items on epay under the reserve, often on auctions that never got a single bid. All were low-end auctions, though. Trouble is, someone has a T-3 or a piece of Collins gear and may have heard/seen/been told of some perceived 'value', so they feel they need to get that much and more, or keep trying until they do. It seldom seems to be a case of someone selling something they want to get rid of anymore in these deals, more someone trying to make a lot of money off something they probably got cheap or free.

Lately it hasn't been a case of letting the 'market' determine the price, it's more a case of relisting an item and waiting for the right suc....erm....'bidder' to come along. I've seen items put up repeatedly for the same ridiculous opening bid until they finally get a bid and sell.

So we can praise the internet for bringing us 'more', but we also have to accept that 'more' means 'more idiots', too - in many different areas. ;)

# 465. New T-3 from Dayton?

Yahoo group: T-368_BC-610
Date: 2000-05-22 02:41:06 UTC
From: Joe Foley
Topic: 465  Message: 465

Hi list,

I listened to Bruce' KG2CI Special Event Station at
the Dayton Hamvention on 40 metres Saturday, he was
VERY busy trying to get to 20 metres, too many
check-ins, lots of attention.

I don't have an antenna for that band up yet or I
would have tried it, too.

I would like to report that "someone" was successful
in bringing a T-3 home with him, no, not me, I didn't
go. He said he'd do a report when he recovers!
Including the usual major hurdle associated with the
T-3,..... getting the silly thing in the car!!

# 468. FS -- Military BA manuals on CD

Yahoo group: T-368_BC-610
Date: 2000-05-22 22:36:57 UTC
From: plmills@attglobal.net
Topic: 468  Message: 468

Hello,

I've finally finished scanning manuals for my military manual CD
project.
The CD is $10 which includes first class postage in the US. I also have
a tube data CD and a surplus conversion manual CD available....if you
are
interested in those, please e-mail me for a description.

The mil CD has the following:

acro-read.exe Adobe Acrobat reader 4.05 installation

ART-13.pdf NAVWEPS 16-30ART13-5, Handbook Maintenance
Instructions Aircraft Radio Equipment AN/ART-13
Oscillator 0-17/ART-13A. The big one, over 350
pages of tuning charts, maintenance instructions,
drawings, and schematics.

BC-312-342.pdf TM11-850, Radio Receivers BC-312, BC-342, BC-314,
and BC-344 (multiple versions of each). Includes
schematics and troubleshooting information.

BC-348J-N-Q.pdf Handbook of Maintenance Instructions for Radio
Receivers BC-348-J, BC-348-N and BC-348-Q,
79 pages plus schematics and diagrams.

BC-348E-M-P.pdf Instruction Book for Operation and Maintenance
of Radio Receivers BC-348-E, BC-348-M and
BC-348-P, 80 pages including schematics and
diagrams.

BC-375-E.pdf Instruction Book for Operation and Maintenance
of Radio Transmitter BC-375-E and Associated
Equipment, 88 pages including schematics and
diagrams.

BC-610-E-I.pdf TM11-826, TO 31R2-3SCR399-21, Radio Transmitters
BC-610-E,-F, -G, -H, -I and Radio Transmitter
T-213/GRC-26 and Antenna Tuning Units BC-939A
and -B, 150 plus pages including schematics
and changes C-1, C-5, and C-6.

BC-614.pdf TM11-5054, TO 16-40BC614-6, Speech Amplifier
BC-614-E,F,H, and I, 60 plus pages with schematics
and wiring diagrams.

BC-1031-Pana.pdf TM11-446, Panoramic Adaptors BC-1031-A, BC-1031-B,
BC-1032-A, and BC-1032-B, 100 plus pages with
schematics

ME-165g.pdf TM11-6625-333-15, Standing Wave Ratio Power
Meter ME-165/G

Mil-Hdbk-213A.pdf Military Handbook, Electron Tubes, Cross Index
and Type Identification.

R274-FRR.pdf TM11-897, Radio Receiver R274/FRR, 104 pages with
schematics. (SX-73)

SRR-11-13.pdf Navships 91875(A), Instruction Book for Radio
Receiving Sets AN/SRR-11, AN/SRR-12, AN/SRR-13.
The big one, several hundred pages of information,
diagrams, and schematics. October 1953 manual
with change 1 dated August 1956.

t195-maint.pdf TM11-806, TO 31R2-2GRC19-11, Radio Transmitter
T-195/GRC-19, field maintenance manual, 190 pages.

t195-schem.pdf Schematics accompanying above TM11-806.

t195-oper.pdf TM11-5820-295-10, Operators Manual Radio Set
AN/GRC-19, 48 pages.

t368-dep-maint.pdf TM11-809-35, TO 31R2-2URT-134, Radio Transmitters
T368/URT....And Antenna Tuning Unit BC-939B
Field and Depot Maintenance. Has changes C1, C2,
C3, and C5 and covers through the T368E model.

t368-oper.pdf TM11-809-10, TO 31R2-2URT-121, Radio Transmitters
T368/URT Operator's Manual. With addenda to
cover T368 through T368E.

t368-org-maint.pdf TM11-809-20, TO 31R2-2URT-124, Organizational
Maintenance Radio Transmitters T368 through
T368C, with changes C1 and C4

Sorry for the extra bandwidth. I forgot to mention that the manuals are scanned in Adobe .pdf format so they can be printed or viewed on screen. Requirements are Windows 95 or 98. Version 4 of the Adobe reader is also required but I've got that on the CD in installable form.

thanks,
Phil

Ok, so after trying to find a replacement air variable
vacuum cap for a fellow list member and seeing the
prices of the used ones I'm lead to ask if anyone
knows what a new T-3 cost the gov't, back when they
were buying them.

And does anyone know where we can find a 1500 pf cap
for a T-3?

Thanks,

73

Joe

Joe,

No lead on a variable cap for the T-3 other than maybe a call to FAIR...did see two plate tank coils for the T3 at Dayton... pulls...they asking $50...most I watched didn't know what it was...

BTW, found two new 4-125's (amperex) in box...at, after SERIOUS bargining for 45 for the pair...Did I get taken? Don't know, but they were a pair and chance of find two new ones, I felt was slim.

73 es hope to be at Rochester...

Gene

++++++++
Registry update,

And to get information on the Loading cap that Phil needs. Also, the filament transformer he needs for his RF deck.

My T-3 has the above information on the tag on the RF deck but the following is deeply stamped on the left rear corner of the same deck.

Contract # DAAB05-67-C-0022

ECCO Electronic Components Corp.

So, I think my front panel has been changed at some depot level maintenance event. The RF deck just doesn't look old enough to be from 1959. But then other parts could have been changed, too.

The tuning cap has this on it:

VACAP Corp. Union City N.J.

WC-300-42-10

SM-B-184928

No values or anything else.

The loading cap:

Matchlett

20 - 1500 pf - 10 kv - 75 A

ML-VCV-12B

SM-B-1842929

I'm wondering if the "SM" numbers are part numbers just for the T-3's, that having something to do with them being in sequence.

The filament transformer is a Transonic TS-44161 with
a single primary for 100 or 115 VAC at 50 or 60 cps.
The secondary has three windings of 5.0, 6.3, and 26.5
Volts at 14.5, 2.5, and 0.5 amps respectively.

The other transformer is a Sola # 22508 with a dual
primary for 95-125 V or 190-250 V. The secondary is
6.3 V at 6.0 VA. Terminals 8, 9, and 10 are connected
to a cap and are to make up for the differences
between 50 and 60 cps. Evidently some power factor
correction, too.

So, if you find yourself at the hamfest hiding under a
table, either from the rain or the XYL, check to see
what you're laying on, that sharp lump may be
something we can use!!

Happy hunting,

Joe

# 474. First start-up for a T-3?

Yahoo group: T-368_BC-610
Date: 2000-05-24 03:47:03 UTC
From: Joe Foley
Topic: 474  Message: 474

Hey Steve,

Before you put your T-3 together you might want to
take the interlocks APART and check them carefully.
All but one of mine needed work, they were all plugged
with lumps of solder. The back of the power supply
deck was bent inward so it could never have worked
right, probably couldn't even make contact.

ALL of the others showed heat damage from broken
strands of wire, some only had three strands left.
The one on the RF deck was burned and it didn't show
outside of the plastic case!! I had to drill out
three of them to get the wire to fit in properly. Not
only that, but the setscrews on the wires loosen up,
too. Especially after several heat/cool cycles.

Don't forget the electrician's anti-oxidation goop,
too.

What else should we add to a proper start-up procedure
for a questionable or newly acquired T-3?

When I first got my T-3 I really wanted to keep it as original as possible. Then reality hit. I continued having problems during QSOs. The problem was always with the interlocks. No amount of cleaning or adjustment kept them working. I may buy myself a month or two but then the problem resurfaced. Bottom line, I bypassed all the interlocks and have not had related problems in years. 73 - Mike

# 476. T-368/URT New Prices

Yahoo group: T-368_BC-610
Date: 2000-05-24 12:36:12 UTC
From: Hagan, Reid J
Topic: 476  Message: 476

The T-368/URT has an National Stock Number (NSN) of 5820-00-503-2640 and, through my research of government databases (most now obsolete), I have found that the original price of a T-368/URT was $3660.00, or about the price of a fully loaded (and then some!) Cadillac in the early fiftys! Data retrieval is difficult at best, but I am trying various avenues and will keep the "list" appraised of any findings.
A few interesting T-368 facts found in databases:

AC Voltage Rating - 115.0 vac nominal
Freq. Control Type - Master Oscillator
Frequency Rating - 50.0 Hertz Minimum and 60.0 Hertz Maximum
FSC Application Data - Radio Transmitter, Radio, E6Dept Navigation, Except Airborne
Internal Battery - Not Included
Joint Electronics Type Item Name - Transmitter, Radio
Joint Electronics Type Designator - Type No. T-368/URT
Output Freq. Rating - 1.500 Megahertz minimum and 20.000 Megahertz maximum
Phase - Single
Power Output - 450.000 watts nominal (all three emissions)
Special Features - 19.25 in. X 30.50 in. X 41.00 in. O/A Dim.
XMTR Band Qty - 5
XMTR Emission Type - AO and A1 and A3

# 477. FW: [T-368_BC-610] T-368/URT New Prices

Yahoo group: T-368_BC-610
Date: 2000-05-24 16:51:03 UTC
From: Hagan, Reid J
Topic: 477  Message: 477

Joe,
What I have been actively pursuing are records that will lead me to the actual Provisioning Parts Lists (PPLs) and Allowance Parts Lists (APLs) that would list all parts contained within a T-3 as originally procured. These lists usually are configured in a "top down breakdown" that shows all indenture levels within the unit. This list would then breakdown the unit into subassemblies and then minor assemblies or actual piece parts -as this unit would have been required to have all parts shown . Additional data, if procured, may list all parts with Source, Maintenance and Recoverability Codes (SM&R Codes) which define whether parts are throw-aways, reparable items, salvageable for parts, etc. I will share any and all data uncovered with the T-368 list. The more we all know about these fine old rigs the better!

1). "You must be using a side band rig...."

2). "That sounds like a rice box."

Now mind you if it were a SSB rice box that might not be a bad report but now that I've heard Kenwoods and SSB rigs I have to take exception to those comments and do something about it.

Can't have something like a T-368 talked about like that! Just ain't right.

Hi Joe, I kept the third e-mail brief because I wasn't sure it would make it, but it did. I used Watkins Motor Lines to ship it and they did a good, careful job. They did have some hydraulic problems in Kalamazoo which took about a week to fix. How do you know if the modules are all "F"? I haven't inspected it that closely yet. Jeff, W8XQ told me the T-368F was unmodified except for a mike jack for a D-104. I just sent an e-mail asking him about that. Right now, the transmitter is sitting on a 2X4 frame which I built (treated wood). I hope eventually to put casters on the cabinet. It does have a grounded plug. If Jeff is right, the interlocks are not jumped. As you can tell, I've got a lot to learn Joe. I'm retired now, so I have plenty of time to educate myself and hopefully benefit from the collective knowledge of the group. Thanks and 73, Don, K2AUS

+++++++
That's good to know. Shipping has been the biggest
headache to getting one of these home. It sometimes
determines whether the transaction happens or not
because of the price added for shipping.

How do you know if the modules
> are all "F"? I haven't
> inspected it that closely yet.
++++++++++
Well,... since there isn't any "F" manual to compare
it to,.... we're kind of wondering, too. I think the
only big difference between the "E" and the "F" is the
vacuum T/R switch.

Jeff, W8XQ told me
> the T-368F was unmodified
> except for a mike jack for a D-104. I just sent an
> e-mail asking him about
> that.
++++++++++++
Hmm,.... wonder how he did that.

Right now, the transmitter is sitting on a 2X4
> frame which I built
> (treated wood). I hope eventually to put casters on
> the cabinet.
+++++++++
At 700 Lbs. you'll want some heavy ones. Some don't
think the cabinet is strong enough but I guess it
depends on how far you're going to push it. I made a
sub base out of 3" iron channel which handles any
uneveness in the concrete floor.

It does
> have a grounded plug. If Jeff is right, the

++++++++
I'm really just starting myself so I'm right in that
boat with you. There are a lot of helpful people on
this list though.

# 487. Tube hints from Dayton

Yahoo group: T-368_BC-610
Date: 2000-05-25 16:19:44 UTC
From: Joe Foley
Topic: 487  Message: 487

I found this on the AM Window BBS, its from this persons visit to the Svetlana booth at the Dayton Hamvention.

Posted by k4kyv on May 24, 19100 at 23:16:39:

During a rare excursion (for me) to the indoor display area at Dayton, I talked to the Svetlana people at their booth. They told me that Svetlana is still very much in the business of making glass tubes. He said that the 811A's and 812A's were never actually made by the Svetlana factory, but were manufactured at another factory in Russia, and Svetlana bought them to sell under their brand name. Also, some of the "Svetlana" 811A's were Russian military surplus, and since opening up trade with the rest of the world, that source has run dry. He said the 811A's and 812A's were discontinued because the quality of the third party vendor's product had dropped below Svetlana standards. He suggested purchasing 572B's instead. They had on display a beautiful pair of 300B's for the audiophool market. They look just like the original Western Electric ones. The 300B is basically a 2A3 on steroids with a 5 volt filament.

An interesting tube is the SV572 series audio tubes. They are similar to the 572B, but the plate lead goes to the socket at the bottom instead of through a plate cap. Consequently, the plate voltage rating is reduced. They make several versions with different amplification factors. There is one with a mu of 3. Its plate resistance is 1600 ohms. The maximum plate voltage is 1000. This would make a nice class-B driver tube to use in a circuit similar to the one that uses 845's. I believe these tubes run about $70 each. They also make an "811" series with maximum plate voltage of 800.

Interestingly, Svetlana engineers strongly recommend against operating a tube that has fingerprints left on it. They recommend wearing gloves when handling tubes, and wiping off any prints with a cloth dampened with alcohol before firing up the tube. Supposedly, certain oils react with the glass and generate hot spots on the envelope that could cause the glass to crack. This is the same precaution recommended for high intensity

light bulbs.

Hi,

Does this item look like a workable replacement for
the loading cap for a T-368?

http://fairradio.com/0ucsxf.htm

Joe,

looks like the right style, might even be a pull...didn't find any
dimensions, but I didn't look real hard either...

Thanks for the listing...Guess I'm surprised there aren't more on the
list? If this is an indication, there ain't many of these critters
around...or maybe most arn't aware of the list...

Any way, keep up the list...hope it grows...and if u hear of any spare T-3's for sale, let me know...I'll go get it...I can truck it myself..(grin).

+++++++++
Hey, Gene,

Are you sure about this? I just checked mine again,
its an "E" model from the same manufacturer, same
contract number and its S/N #160.

I wonder how that happened? What's going on here?

Joe

Joe,

Wow! Let me go down and check...will report...am sure I reported it
correctly unless a typo got us some place...??? Yikes!

++++++++
Ok, but is your Bendix a "C" model? That's what I
can't understand, acccording to the S/N your's was
built after mine on the same contract but mine's an
"E" model.

Joe

Looks close but missing the link. The 610's have either a fixed or an adjustable link.

# 499. T-368 counter needed

Yahoo group: T-368_BC-610
Date: 2000-05-30 01:56:24 UTC
From: Bill Coleman
Topic: 499  Message: 499

Need the Veeder counter for the load control. Left side input, 1/8" shaft.

I'm going to try to repair it, but not too hopeful as the 'ones' ring is split.

A heads up for all you T-3 owners where the maint tech likely also worked in the motor pool... The mechanics of mine are fairly swimming in oil. I suspect this is the cause (Root cause?) of the counter failure. The oil has migrated along the shaft into the counter. The 'tens' digit was pretty well goo'd to the inner wall of the counter. This probably caused the units ring damage.

The counter is quite easy to disassemble, a challenge for us bifocal types, but not too bad.

Any parts out there? (Already scanned SSN without any luck)

73, Bill N2BC

# 500. Re: [T-368_BC-610] Registry 5/29/00

Yahoo group: T-368_BC-610
Date: 2000-05-30 02:49:49 UTC
From: Joe Foley
Topic: 498  Message: 500

All right!! We've got a BC-610 registry!!

Dan Harlan's gonna volunteer to manage it. So post
your info to the list and lets see how many we get.
This ought to be interesting.

Joe

# 502. Registry entries

Yahoo group: T-368_BC-610
Date: 2000-05-30 17:17:04 UTC
From: Joe Foley
Topic: 502  Message: 502

Please note:

All entries to the T-368 or BC-610 registries are
being handled by members of this list other than me.

To put your transmitter into the registry you either
have to post your information to the list or to them
personally.

Their E-mail addresses and information are listed on
the registry list posted whenever they're updated.

Thanks,

Joe

# 505. RE: [NyHam] Ham Radio Communication Help Needed

Yahoo group: T-368_BC-610
Date: 2000-05-31 03:32:38 UTC
From: Joe Foley
Topic: 505  Message: 505

Would anyone in the Albany, NY or Amsterdam, NY area
be able to help this guy out?

Good opertunity for Ham radio help, its too far away
for me to go to.

This is from the NyHam mailing list.

Thanks,

Joe

# 508. HV feed mod

Yahoo group: T-368_BC-610
Date: 2000-06-01 01:56:27 UTC
From: Bill Coleman
Topic: 508  Message: 508

I'm in the process of making the modification to move the HV feed and blocking cap over to the 4-400 plate instead of mid-way thru the PI-L. I've seen a recommendation to use a B&W 800 choke, any reason to not re-mount and re-use the existing chokes?

For those of you who have NOT made the HV feed change: I found one of the original .001uF blocking caps had pretty well dumped it's guts - the one in the middle of the stacked three. Suspect it gets the hottest of the bunch.

So far I've found the T-3 quite easy to work on (mechanically anywho). Very easy to pop off the vac var mechanics and get access to the original chokes & blocking caps. 'Re-wiring' the tank is very straight forward & one of the hunks of removed straps is a perfect fit between the two sections of the bandswitch.

Also, still looking for the Veeder counter for the load control. No response from Fair Radio yet. Anybody have one out there??

THX & 73, Bill N2BC

# 511. T-368 Registry info

Yahoo group: T-368_BC-610
Date: 2000-06-03 23:27:17 UTC
From: Bill Coleman
Topic: 511  Message: 511

Not sure who was collecting this info, but I would like some input on my conclusions anyway...

RF Deck is B&W, Order # 3472-PHILA-52, Serial# 42. Definately a "BASIC" (no IPA protect).

Modulator is ECCO (Electronic Components Corp), Contract DAAB05-67-C-002 (Does the "C" indicate the model?)

Power Supply has no indication on the chassis I could find (still recovering from bringing it down into the basement). But the HV transformer has the single untapped primary winding & 6,336V secondary - so I conclude it's at least a "C".

The RF deck is a "Basic", I think the modulator is a "C", the PS is probably a "C", and the cabinet is NOT a "BASIC" based on the pix in the book - .
So I guess what I have is a "C" model with a swapped out RF deck. Whatcha think?

Still looking for a Load Cap turns counter....

I may not be able to check for responses for a while, next task is to bring down the cabinet - ooffff!

> (Does the "C" indicate the model?)
+++++++++
Good question, I'm going to say they were well into
the "E" models at that point BUT Gene has a "C" that
was made on the same contract number as my "E" and has
a LATER S/N! Explain that! Considering that the
contract numbers and the model designations are on the
same tag, they can't be easily confused. What
happened? Were the "C" and "E" models made at the
same time?

+++++++
So far the only way I can determine it is by the
layout of the components.

Compare the antenna relay voltage to be sure! They
are different. Sounds like a "C" to me.

++++++++++
Put it on a big piece of thick carpet and slide it,
you won't believe how much easier that makes it.
Unless you have carpeted stairs.

Was the T-368 designed by the signal corps or was it commercially designed? Either way it might be possible to find out who the design team was for the various models and query them as to the design history.

The other day I ran across a former station chief who operated one of the first AN/MRC-2 radio sets. While he didn't have anything to do with the design, it points up the possibility some of these old timers may still be around.

++++++++++
Yeah, check the HV wire from the 3B28's, it gets checked like old tires. Especially where it goes through the holes in the chassis, those should have been bigger holes, they're just too tight. I tried putting HV tape on them but I couldn't stop the arcing, so I replaced it all with new silicone rubber insulated stuff good for 25 Kv.

Also, after soldering the new wire in place the plate transformer leaked, got that fixed with thin super glue on the terminals. Be sure to write that one in the book!

The interlock on the power supply deck was bent inward and had to be straightened, cleaned, rewired, and adjusted.

The lens on the green power light didn't match the red one, but, you know,..... I had one of the chrome ones in my junk box!! Now they match, both chrome!

After that and carefully cleaning the HV insulators and setting the spark gaps I've had no other problems.

# 515. BC-610 Registry entry

Yahoo group: T-368_BC-610
Date: 2000-06-04 16:40:50 UTC
From: Mikhael Brown
Topic: 515  Message: 515

Here is the info on my BC-610.

Model: BC-610-I T-213/GRC26
Serial Number: 21
Order Number: 18723-PHILA-48
Tag shows it was Modified by Barker & Williamson Inc

Also have the BC-614 Speech Amp
Model: BC-614-I
Serial number: 236
Order number: 3167-PHILA-51
Made by Hallicrafters

Both of these will be up for sale in July if anyone is interested.
Pickup ONLY...

I am getting an "E" model and need to make room for it.

Ok, so where were the T-368's and BC-610's? Hmmm?
This IS the T-368, BC-610 mailing list ya know! I
just have to poke you up about that.

Nice pictures, must have been a real good time.

How shall we torture this guy who goes to a show like
that with all of the nice California weather and
doesn't even have ONE picture of a T-368 or a BC-610?

I already E-mailed Mark Blair about not having one in
his shop van M-109. What a lame reply, he's working
on it!

That's it! I have to say this: YOU WEST COAST GUYS
AREN'T TRYING HARD ENOUGH!

Butler fest was nice. Not many large radios, saw a B&W 5100 for $200 and a DX-100 for $150. A Viking II and vfo was acquired by one of the gang and an unknown young man was seen running to his car with an R388.

I managed to buy an AER-O-COM 100XLA medium frequency beacon transmitter contained in two six foot racks! Its still in the van as i have to make room somewhere for it. One rack is the power supply's and tuner, other is 2 RF decks and 2 modulators each containing a quad of 807s. I'll have some pics up by the weekend.

From: Bill Coleman
Topic: 522  Message: 522

Thanks go out to KG2IC and KG2CI. Some significant steps forward in the past few days.

Biggest step was moving the pieces from the garage to the basement 'shack' area. Took a while to round up my teenage bruisers to help, but I finally cornered them and threatened to suspend their auto priviliges if they didn't share the pain.

I've determined that the RF deck is a BASIC and the Modulator deck is a much later replacement. The cabinet has no label and it too may be a BASIC (has K1 antenna relay), but the rear cover matches a 'letter' model and not the pix of a BASIC, this threw me a bit.

Because the modulator deck is much newer than the cabinet, it was expecting the S14 interlock (front upper right on the cabinet), but this is not on my cabinet. Without the S14 interlock, the mod deck refused to supply B+ to the exciter. I added a jumper in the mod deck plug and things started to move forward! Have the exciter working FB.

I've also been pleading on here for a replacement load control counter. Fair Radio was running behind in their E-mail and replied they have the entire assembly 'in stock' for $30, so a fix is on the way. I suspect a phone call in the first place would have been much quicker!

Keep your eyes open for an HV mushroom cloud centered in Central NY - plan is to start warming up dummy load oil tonight.

Now to ask for more guidance... Would appreciate hearing about audio mods. I have the WA1HLR mod documentation and also the N9FOY mod. Any others out there?

+++++
If you jump the filters in the speech amp and adjust
the clipping to the proper level it'll still sound
like an SSB rig or a rice box,..... like mine does.

From: Bill Coleman
Topic: 527  Message: 527

What is the nominal idling current on the PA: CW, plate voltage on, key up? I'm seeing abt 120mA, seems kinda high. But then it's still darn chilly here in upstate NY and the additional couple hundred watts of heat feels good!

I'm wondering if the clamper is working right... the book is not very specific, says it cuts the plate current to a 'safe' value. 120mA is indeed safe, but still feels high.

Making lots of RF with my T-3 project, seems generally well behaved. Have not fed it any audio yet tho.

This guy used to work for Collins Radio so he'd know if they were involved in the design.

Joe

"Dr. Gerald N. Johnson" wrote:

I'd recognize a T-368 at some distance, but would probably look at the tag to confirm it. Otherwise, I've only seen one in person and it wasn't something made me want to become more acquainted with it.

Which is to say that I don't know who designed the T-368. Could have been a Signal Corps design, but more likely was a contract design. I'd have thought maybe TMC or RF Com... An improvement on the BC-610. Though not quite as mobile.

# 530. T-3 speech amp query

Yahoo group: T-368_BC-610
Date: 2000-06-08 20:08:47 UTC
From: Bill Coleman
Topic: 530  Message: 530

Poking around in the speech amp chassis, I see a matching transformer that is not on any of my diagrams (Basic thru E).

It is a 600 ohm : 25K ohm, connected to J3 on pins 2 and 3. Anybody show this on their diagrams? What's it for? It does not appear to be connected to anything in the speech amp... in on pin 2 and out on pin 3 - for what?

Also, haven't heard from anybody on the PA idling current. Looking for CW key up idling current. I get abt 120mA which seems high. The 5933 clamper is doing it's thing, reducing the screen voltage from 500V or so to 80V on key up. But at 120mA idle the 4-400 is dissipating more on key up than on key down... seems dumb to me.

# 531. T-368 Mystery transformer

Yahoo group: T-368_BC-610
Date: 2000-06-09 20:35:03 UTC
From: Bill Coleman
Topic: 531  Message: 531

Yesterday I posted a query about an unidentified transformer in the speech amp of my late vintage modulator deck (1967ish according to date codes on some of the parts).

The transformer is not shown on any of the diagrams I have. Dennis, W7QHO, wins the prize! But don't hang out at your mailbox too long Dennis.

I traced the wiring from the speech amp plug - the transformer is indeed a matching transformer for the 600 ohm audio input.

My mod deck is wired as follows:

From J12-D (600 ohm audio input), to P6 / J6-25, to Speech Amp P3 / J3 -2, to the 600 primary of the transformer, other end of the primary winding to ground

The secondary (25K): one side is grounded, the hot side goes out Speech Amp P3/J3 - 3, to the top of R17 (600 ohm input level pot). The wiper of the pot goes back to the speech amp via it's own shielded cable to J5

So if you check your diagram, the 600 ohm input takes a detour to the speech amp chassis, thru the matching transformer then to the 600 ohm input level pot. There is no nomenclature (T-whatever) on the transformer or anywhere on the speech amp chassis). It's unfortunate that the 600 ohm side is unbalanced (but fixable) !

Another tip-o-the-hat to Dennis for passing along that his T-368 PA draws 140mA on key up. I still think it's pretty strange to have the PA dissipating more power on key up than it does fully loaded key down - but that's what it does!

Now I need to figure out why the modulators draw current like a champ but the modulation level seems way low. Another interesting phenom: one of the 4-125s shows color at idle, the other does not. But when driven to 100Ma or so, the 'color' swaps! I've only listened to the audio, need to scope things. Then I may try a couple of known good 4-250s that I have, then ??

Thanks to Dennis, Steve W2ZR, and Joe KG2CI

73, Bill N2BC

You mean to tell me that NOBODY is going to buy that tank coil on E-bay?!?!?!

Its only at $20!!

Did anyone check with the seller to see if he has any more parts from the T-3 he tore apart?

It'd be hard to believe that that's the only part he has.

Joe

# 539. WTB T-368 Mod Xfmr

Yahoo group: T-368_BC-610
Date: 2000-06-16 00:30:18 UTC
From: Bill Coleman
Topic: 539  Message: 539

My mod transformer has developed a high voltage short. Refurb was proceeding great until it started tripping out the HV breaker. I need to mooch a hi-pot tester to prove the transformer is bad, but I had suspicions about it before it started tripping the breaker.

FYI, in "Tune", with the primary load resistor, the transformer repeatedly arcs... sounds like a machine gun. With full primary ("Operate"), there's longish, nasty sounding arc and the HV CB trips.

So, I'm on the prowl for a replacement... Looks like one from a Viking 500 may fill the bill too. Anybody have a 'spare' out there? Any other suggestions for alternatives?

THX, Bill N2BC

# 543. Where is everybody?

Yahoo group: T-368_BC-610
Date: 2000-06-18 05:12:01 UTC
From: Joe Foley
Topic: 543  Message: 543

I was on 3880 MHz all evening, talked to Bob W2ZM
who's using a 1930's transmitter, John K1KHP with his
T-368, and Ed KB2NSP with a 3-1000Z. Couldn't quite
reach Jeff W0XV in Minn. who was using a Collins 30X1
or Dan NI9Y with a 32V2.

My antenna had a high SWR probably from the weeks of
rain but the T-368 worked well after warming up. It
started out with what seemed to be a sticky plate
relay but I think its the control circuit not
releasing, have to look closer at that, after a warmup
it did fine. Also, the receiver muting relay allows
the receiver to come back on before the transmitter
has shut down which isn't good, it makes a chirp or
buzz in the R-390A. That's not good either.

During a transmission!

Hully Cow!

Still got filament voltage on the meter,..... still
got modulation current,..... PA Plate meter shows 275
mA,.....

What's going on here? Let off on the mike,... Glen
WA3GPE says its still working "try it again".

A real quick check of the most obvious
showed,.....

The light bulb blew out!!!!

ARGH!!! New bulb, too. GE made in USA.

# 554. Old Military Radios Net

Yahoo group: T-368_BC-610
Date: 2000-06-26 01:28:24 UTC
From: Joe Foley
Topic: 554  Message: 554

Hi List,

The Old Military Radios Net at 05:00 on Saturday was
well attended but the static was miserable!

I didn't hear any other listers in attendance.

Three T-3's were being used but only one BC-610 was
heard, I'll take more detailed notes next time.

W3PWW was host

W4HWT
WA2EJT
KG2CI
N3XON
KJ8L
W1NZR
KD3HT
K1KHP
KW1I

Were all heard and/or talked to.

Anybody want to schedule another T-3 net, or a BC-610
net, or a list net?

I'll be more than willing to let the more experienced
operators do the net control duties.

Thanks,

73

Joe

All,

There were times back in the mid-90's when we almost renamed it "The BC-610 & T-368 net." Condx were so horrible that only the guys running the big guns could hear each other! Good bunch of guys who have been running 610s and T3s (and lots of other interesting stuff) for years. Recommend joining in as often as possible.

Hello Dennis and all -

Boy I have not checked into the Saturday morning net in years it seems. I still remember when Walt Hutchens and I were talking about starting a military net. Boy, that was a while ago. My T3 died and I got so much stuff in the basement I cannot get to it to fix it. Along with that the R-390A that I use is dead as well and so is the Racal RA-17. And more recently my Collins 32S3 died also. So I have not been on the air much. I do have a Kenwood TS-430S up here in my office and I do get on with that from time to time. Even if I could get to the rigs, my workbench is so full that I cannot use it. I need to have a big hamfest at my QTH. From what a lot of fellows recently told me, I have more stuff here than what there is put all together at some that they have been to recently. They come and haul carloads of stuff away and it does not seem to make much difference. The other Wednesday night I listened in on 7296 at midnight but all I could hear was very strong foreign broadcast. I was hoping to be able to get on there with one of my PRC-70s with the matching AM-201A amplifier, but it does not look too promising. 73 - Mike

Wonder what the definition difference is between "no reserve" and "minimum bid"?

Not true. A lot of times a high opening bid will not get an auction started. It is the psychology of the bidding. A reserve will get it started and will often exceed the reserve because one guy just cannot let the other have it. For example if an item has a minimum starting bid of $500 most people will not bid on the item so it never gets started. If the same item has a $50 staring bid but a reserve then it will in all likelihood get started and continue to grow. In most cases exceeding the reserve. I have placed items on ebay trying both methods and the high minimum bid usually did not work for me. 73 - Mike

Good point!

I used 10 Gauge wire. Don't use plastic pulleys either, the UV radiation will kill them. Use brass and stainless pulleys, the rope can be replaced from the ground but the pulleys are up there for the duration. But you could raise the pulleys by a rope, too.

I use the corner insulators for electric fence as a pulley, they're smooth and the ceramic wears well, not only that but they're cheap at $5 for ten at the farm supply store. If you weave an eye in the rope to hold the insulator by its circumference (the groove is deep enough for a 1/2" rope) then run the haul rope through the hole, the insulator can be tied in the tree and will last years. It might take three at the center, two for the antenna conductors, one to haul the center up with. Then two at each end, one for each conductor/to haul rope, and one for each "pulley-tied-to-the-tree". That's seven and three extra in case Mr. Murphy shows up.

If you can't find anyone who knows how to weave an eye and there are no sailors around ask an electrician.

My inverted vee is 70 feet at the center and is 145 feet on either side made out of solid #6 copper. I feed it with home made ladder line with 6 " spacing. I also have a steel pulley up at top and steel stranded cable going to the pulley. Never needed to use the pulley and never had a problem with the system either. It has been up about 4 years. Works great. 73 - Mike

# 566. Bow and Arrow method

Yahoo group: T-368_BC-610
Date: 2000-06-30 22:51:14 UTC
From: Joe Foley
Topic: 566  Message: 566

Guys,

Lets not do the Bow-and-Arrow method.

Consider: when the string gets fouled, and that can
happen easily even with a fishing reel, the arrow will
come back in the same line it left at only it will be
coming back point first!!

Ask me how I know.

I stepped out of the way, very quickly! Thank God it
was a Judo point.

Probably,

I was talking to a fellow ham on the 2 meter repeater a few
years ago and he was telling me about the big black transmitter
that he left in the garage of the house he sold because he
didn't know what to do with it. No, I did not kill him but
I did harbor malicious thoughts :-)

Frankly, I'll bet this scenario occurs more often than
we suspect.

Hey Joe,
about 11:30 local time here at WB2FCN REAL RADIO IN BUFFALO, listening
to you and KC8LII on 80 meters.

Good signal here in Buffalo as follows:
Antenna 158 ft. end fed long wire 40 ft up, tuned with Johnson matchbox,
RX #1 SP-600-JX-17 40 DB over S9
RX #2 Drake R4C 20 -30 DB over S9
RX #3 Heathkit SB-303 (AM) 30 DB over S9
Great sound here T-368 is working Good.

# 572. Results of last night's challenge

Yahoo group: T-368_BC-610
Date: 2000-07-01 15:21:25 UTC
From: Joe Foley
Topic: 572  Message: 572

Well, no one from this list was heard last night, you know what that means!!

There was, however, one response stating that I was heard on 75/80 mtrs, so at least I won't suffer that same fate.

We just signed up two more list subscribers to bring us up to 56!

There are a bunch of operators on the air that have T-368's and BC-610's that don't know about this list, some are getting their rigs operational, others have been using theirs for years, we could help each other. We all know about digging for parts!

It sure would be great if we had more people operating that are from this list, I'd like to talk to you guys.

Can we actually talk from NY to SC to FL? Do we even want to try to get to 7 land? I heard 5's on last night that came in OK, but didn't get to contact them.

How 'bout to night?

# 573. Possible T-368 for sale in MI

Yahoo group: T-368_BC-610
Date: 2000-07-02 17:19:03 UTC
From: Joe Foley
Topic: 573  Message: 573

Last night's QSO's found a possible sale of a T-368 if anyone's interested. Its reported to be in very good shape and is in Michigan. I didn't talk to the owner, just to someone who thinks it might be for sale. This was from Mike N8ECR.

I can attest to the fact that it still does. It's amazing how many people have things they just want out of their way. I've missed a few, but I've managed to save many more. Currently there's a surplus 2 mtr 6' rack rig in a guy's basement I need to go retreive.

Have pickup and appliance dolly, will travel...

the biggest item I ever fell into that someone was
looking to clear out was a nice clean little ARC 5
receiver; I keep wishing I'd trip over a KW-1 or what
have you. . . I suppose that by far the most important
thing is that these items remain in circulation, use
and appreciation by those who know and can care for
them-- rather than the dreaded fate of being ignorantly
sold off as scrap or the like

Thanks for letting me join the group.
I have a BC-610 model I, serial # 261, and the BC-614,S/N 608.The location is Petoskey MI, and in the Winter I go South and have T-368 , the S/N I am not sure as I am not there at the moment.
The T-368 works great, but I acquired the BC-610 earlier this year and am having trouble getting it to work.
When I load the unit into the ME-165G power meter on low voltage, I can get about 100 watts out at the 100 MA plate current, but when I go to High Voltage I can not get the plate current over 150 MA unless I increase the coil into the TANK coil.
When I do increase the loading to 250 MA ,by changing the loading coil position, I get 300-350 watts out.
The problem is that when I modulate , the plate current decreases and the power on the ME-165G decreases.
I have checked both the grid current , drive , and the negative voltage on the grid of the 250TH......they are all as the manual says.....does any one have suggestions to correct this problem? I dont have a spare 250TH to see if that is the cause.
Appreciate any suggestions.
Roy w9qm

!!W@W!! They must be !!RARE!!

Only $20! He must be crazy, lets take advantage of
him and bid against each other, will raise the bid to
something realistic.

They're used so I know they work. Maybe the audio
response is better with these vintage caps. They
don't make them like THAT anymore!

I just had to !L@@K! at what else he had to sell. You
missed the roll of 12 gauge wire starting at $80!

Don't forget the industrial/commercial places that do
that, too. And then there's the schools, sometimes
they have NO idea what the stuff is. That's where I
get most of my good stuff!

Joe

Hi Joe and T-368 Gang,

Here I am again...have been on the run most of the spring and summer so far...just got back from Batavia where I missed the 'fest'...date got changed and I missed the signal...that's ok its this weekend...although I won't be able to attened...its about five and a half hour drive...not too bad but wife can't get more time off...not to worry...more fests coming up...and we did get a chance to spend time with Missy Marilyn's Dad at the VA hospital...

Re the T-3...progress is slow, but 160 dipole is finished, and am planning and digging for the parts for the turner...got to bolt it together and see if I can tune the monster on 160 as I hope for...

work on station slow these weeks due so much else..but the battle continues with variac added to my vallient II for slow start, the HT-33B cleaned of the odd relays and othe stuff that was in it when I got it in Rochester, and my ST Julien's Blue Striper Number 2 is nearly ready to put in its case for some real life action on the ham bands...Gosh I love those receivers!!

Hope all is well with you and the T-3 Gang...will soon start to dig hole for the tower...but, ran out of energy tonight ... was at work by 0600 for a multi hour stint in one of our analysis labs...and so real short of sleep...will charge my batteries and then get back at the projects!!!

73, and still planning on 160 if I can get to the tuner...nobody seems to make one commercially for a half kilo balanced feeder that covers the 160 band...at least nothing that looks and weighs in like a real radio...Soooo, what is one to do? Got make it my self...

agn, 73,

Gene

Oh, and one final note...am going to add a 120vac line across the T/R relay and bring it out through the pack panel...this to control exteranl multi contact relay for rcvr mute and any thing else that needs to be swithhed on xmit...e.g., muting additional receivers if they are guarding other freqs and maybe turn fan on and off..

Item #382129402 Its got one of those tuning eyes with
the hood on it, cool. I think its a coil and cap
tester.

Also, there's two TV-4 tube testers. R@RE!! W@W!!
L@@K!!

Don't forget the Old Military Radios Net on 3885 MHz
at 0500 tomorrow morning,..... yawn!

Conditions are usually terrible and the solar storm
promises no improvements. But you never know maybe
your MIGHTY T-368 or BC-610 will prevail.

The list has grown to 61 members now and next month we
will have had this list going for one year!

The Batavia, NY hamfest is tomorrow if you can make
it, its raining in NY now and is supposed to be then,
too, so be prepared for that.

No news on the BC-610 registry yet, but the T-368
registry is growing steadily.

For sale: BC-610-E, $650 cash, pick up only at Dadeville, AL

Working, decent looking(8 to 8+) 1944 BC-610E Hallicrafters transmitter, new Eimac final and modulator tubes. Set up on 3885. Uses a D-104 with standard 1/4" stereo phone plug. Built-in T/R relay: With SO-239 to antenna and BNC to rcvr. Safety interlocks intact and working. She's on the air.

This one is just like my BC-610E here in the shack, but the paint isn't as pretty. Cabinet is in nice shape otherwise.

Hi Dave,

Nice looking rig, what model is it? I don't see the caution tag on the RF deck.

I see the newer bezel on the plate meter, is there a plexiglas cover under that or is your's open so that you can reach in and touch the glass on the meter itself?

>
> http://www.hereintown.net/~daveh/T368-002.jpg
+++++++++
Solid state replacements for the 3B28's and new HV wiring. Are there ceramic insulators on the power supply deck where the HV goes through the deck? Mine doesn't have those, both HV wires go through the same hole,..... not good!

Can we see more pictures, please?

# 607. Fun Auction!

Yahoo group: T-368_BC-610
Date: 2000-08-13 22:22:01 UTC
From: Joe Foley
Topic: 607  Message: 607

I just got back from an auction that was in Andover, NY. No, its not near anything! Its 100+ miles south of Rochester, NY and 20 miles north of Pennsylvania.

It was advertised as a collection of antique radios and household goods. I went on the wild off chance that there would be some 4D21/4-125's there,..... yes, I actually went to an oddball auction to look for big transmit tubes!!

Todd, I believe you now. The radios were from a retired EE who died 12 years ago, they were mostly Atwater-Kents,... don't worry, there were no deals that day, one of the "breadboard" types went for $1045! The collector vultures were there from as far away as Canada, Ohio, and NJ. They were well stored, very little damage from water or mold. Its amazing where this stuff will come from. It was a 45 minute drive for me and the SK had lived about 20 minutes from me.

But anyway, back to my interest. There were five 4D21's there but the tube collector, only one, was buying all of them up!! I happened to get a box of junk with a smaller box on the top, sent from Burstein-Applebee Co. back in 1966 with two 4-125's in it that looked brand new! $35 for the box, I've found a VFO in the bottom, too, no idea what it goes to yet. Most of the big box was three inch knobs, got tons of them if anyone wants some!

The 4-125's are in my T-368 cooking now and will be for the next few evenings since they've been stored for who knows how long, maybe 30 years!

There was a box of V-201's sold there, each wrapped in newspaper, at least 30 of them, the price went high, very high!

I would have posted this auction but I only got a few days notice myself.

This was a two estate sale, one was brought from a town miles away inorder to make the auction worthwhile. There's absolutely NO telling where this stuff will turn up!!

# 608. More T3 Pix

Yahoo group: T-368_BC-610
Date: 2000-08-14 02:33:06 UTC
From: David Humbertson
Topic: 608  Message: 608

Hi,
At Joe's request here are 2 more pix of the T3 during the initial
cleaning, testing stage etc. I though I had more but couldn't find them.

Here is the cabinet all ready for the decks to be installed with the PS
and modulator seen to the right.
http://www.hereintown.net/~daveh/T368-003.jpg

Here she is with filaments lit and ready for some adjustments. The
assy conn mini-box had not been installed yet.
http://www.hereintown.net/~daveh/T368-004.jpg

These pix were taken in 1996 and I can't remember all the details.

To answer your questions Joe.
1. Its an E model built in 1962 and overhauled in Germany in 1974.
2. The meter has glass right at the front with the bezel and also
right in front of the recessed meter.
3. I am not sure if there are ceramic feedthroughs or if they are
ceramic grommets - been several years since I have had to
open it up - will be doing the plate tank circuit mod soon though.

++++++++++++
Thanks, Dave, this shows the interlock that someone said they didn't have on theirs, in the upper right corner.

Do you use the B-2 fan? Have you done anything to quiet it down yet?

++++++
It would seem that mine is an older version of the "E"

power supply deck, with the HV in only one hole,
your's has seperate holes for the HV, that was where
mine was Zorching! Tough to find, too!

I'm wondering if that's another mod they made for the
"E" or "F" units.

See? (:

Bet I know who that tube collector was, too. If it's who I think it is, I get tubes from him now and then, very nice fellow.

You should've been at the auction I helped out with in Oct. '94, estate of longtime radioman and ham Jerry Cunningham, W1MMV. This guy was a reg on the DX honor roll before SSB was invented, and had a 'real' radio shop in downtown Barre, VT back in te 20's. I remember him telling me one time "If you think I have a lot of old radios, you'd be amazed at what is buried under the backyard - the dump wouldn't take anymore from me". This guy had 4 outbuildings and a house full of stuff, from old AK breadboards to boxes of unopened 872B's, to E.H. Scott chrome chassis radios to old Collins and E. F. Johnson ham gear. You name it, he probably had it, including a very old Neuman broadcasting microphone.

The auctioneer sought me out because of my knowledge(?)of old radios, this is where being known as a packrat helps out. ;) He was disappointed as the auction progressed, but for the small turnout, he was amazed at the $10K result. Should've been twice that amount(many deals that day). Still, everyone, including the family, was very happy with the result. I had a blast and got a few goodies myself, though I had to have my dad bid for me since I was helping with the auction.

And this was a small auction tucked away in the hills of li'l ol' Vermont - image what else is hiding out there, waiting to be discovered?

Sounds like you had a good time, Joe - good find, as well!

# 611. re: Fun Auction - free for all

Yahoo group: T-368_BC-610
Date: 2000-08-15 15:50:07 UTC
From: Mark Foltarz
Topic: 611  Message: 611

Guys,

I just read the posts about the auction this weekend.
I had a similar experience this weekend in Richfield, Oh. The great exception was that the stuff was not in really good condition.

The whole thing was a great big garage sale. There were four outbuildings and a BIG dumpster. Yeah you got it - the guy was filling up the dumpster ( I rescued several in the box 211s and some other goodies.)

The place had not really been in use for many years and the shop reeked of vermin piss, and there were nests made in everything. However, a close inspection revealed there were diamonds to be had.

I did manage to find about 30 good tubes ( 250th, VT127,1625, 211, 811, 45, 50, 10 etc) a good collection of the SW224 knife switches, a german telegraph key(?!) in addition to other parts.

I did bring home a panoramic adapter model 8B. The main display unit looked great but the power supply was low rent housing for mice .

Those critters pissed so much that the lower right corner of the front panel turn to aluminum oxide and fell away. However, I disassembled what was left and gave it a good blast with air. I then gave the power supply chassis a good scrubbing with hot water and detergergent. Place it in the hot sun to dry. I then shot both the outside and in with spray polyurethane.

All in all it came out pretty good and the the unit is clean with further corrosion halted - at least on my watch.

The weirdest thing I dredged up was the profoundly large transformer. I saw this mostrosity bolted along with four eqaully massive studmount rectifiers to two pieces of 4x4 lumber. The transformer was caked in rust, but what got my attention was the size of the secondary leads - 1 inch copper strap! Lots of current @ low voltage.

I have a GRC19 set that I have wanted play with for some time, however, no power supply. So, I took a chance by bringing the rust monster home - I'm glad I did.

It turns out the secondary windings have an output of 22V R.M.S ( O.C.V.) which under load I figure should maybe go down to 19V RMS. Now, after the bridge and filter the output will be perfect for running 24VDC mil gear. SInce the transformer weighs in at about 120 lbs I figure I have plenty of breathing room at 60 Amp draw. But that thing was really gross with the rust, spider webs and dead bugs.

I took a steel wire brush and an old toothbrush and descaled the unit. Then two coats of Rustoleum gloss black - wow, a restored transformer. I had been looking for one of these for about 5 years and here it was for free with just a minot amount of elbow grease.

In addition to the above I brough back several big soldering irons, basket case rice boxes, and a few more transformers.

So all of this came home for $35. You guys are right: you never know where ( and when ) this stuff turns up. It was a shame that so much was utterly destroyed by critter piss and exposure to the elements.

Hey, our list is one year old,..... sometime this month. Can't remember what day, if it matters.

My T-368 has improved immensly with the help and encouragement provided by the members of this list,.... IT WORKS!!!

And because of that I can say: "My first HF rig IS a T-368!!"

I have witnessed first hand the awesome power that the T-368 has,..... humbling! Don't point that thing just anywhere.

I have talked to KD0HG Bill in Colorado, Tim "the Tron" Smith in Skowhegan, ME, Ott Kazott in PA, and a very few members of this list.

Still trying to push it out to California to work some of the guys I met on the Vietnam Dog Handlers list,... no I'm not a veteran, a relative is.

Working on a better microphone, too.

Too bad my computer isn't as dependable and problem free!!!!

I'm gonna take this opertunity to thank all of you for signing up and helping everyone with their transmitters,..... this is fun!!

BTW: I talked to a guy on 3885 last night, KB2FCN, his name is JIM. If anyone knows him you might tell him that his license has expired!! He didn't show up on any of the call sign databases except the last one I used and it shows his license out of date as of 1998!

Well, I'll tell ya! My advanced case of CRS has turned into full blown CRA,..... Uh,.... let me think,.... Oh Yeah!! Now I remember what that stands for,..... Can't Remember Squat and Can't Remember Anything!

What that was was a QSO with a ham in Michigan and he knew another ham that MAY HAVE a T-3 for sale. As they say in the sales business it would be a cold contact. You would have had to approach the individual as "...from out of the blue."

I'm going to post this to the list in case someone remembers anything.

>
> Please send a contact email or phone number if you

+++++++++
I don't think I had either, seems that it was just a call sign.

>
> Also I'm hunting for a source of high voltage wire
> for a '610 reno,
> any thoughts?
+++++++++
Yes, call Dearborn Wire and Cable and beg your ass off. They're good people and will deal with you, they don't want to sell small pieces but may if you play it right. I had a deal going to get the shorts from their spooling operations but never heard back from them. That might be an approach to try, buying some of their short pieces.

Its a neat company to deal with, men answer the phone, they know what they're doing and will help you, too. No computer answering machine!!

Look at their website first to determine what type you need so you can talk the talk. What I got was an "Engineering sample" of style number 3239, 25 KV, 150 degree C, VW-1, E-31467. That should do anything on the BC-610.

Good luck,

Joe

Well From an observation is this, The top unit is the CV-116, (455KC
IF fsk dual diversity Converter), next two are probably R-390A Rcvrs.
can't zoom in close enough, Vibroplex lightning Bug brown base, and under
the table in the shot is the LS-206 dual speaker system ( 1 for
each receiver output) and the "Green Keys" on the left closely resemble the
TT-98. Boy that was a strain!. Hi Joe.

# 628. T368 parts and pieces wanted

Yahoo group: T-368_BC-610
Date: 2000-08-31 21:53:15 UTC
From: plmills@attglobal.net
Topic: 628  Message: 628

Hello,

This is my semi-annual plea for parts and pieces I need
to complete my T-368.

First, I need the 1500 pf vacuum variable. Or, at least,
could someone please tell me the manufacturer/model/part
number. Along this vein, I need 2 reducers to take a 1/2 inch
shaft down to 1/4 inch.

Also, I bought a blower motor and bracket from Fair Radio
and discovered on looking at the pictures in the manual that
I still need the little angular baffle box that directs air
from the hole in the back panel to the blower inlet.

Finally, I need the filament transformer for the 4-400 final
tube....this is the one that also has the 26 volt winding for
the 6000 tube.

thanks,
Phil
W5BVB

No, not me! Sam in Dadeville, Alabama. Where ever
that is.

Joe

For sale: BC-610-E, $650 cash, pick up only at
Dadeville, AL

Working, decent looking(8 to 8+) 1944 BC-610E
Hallicrafters
transmitter, new Eimac final and modulator tubes. Set
up on
3885. Uses a D-104 with standard 1/4" stereo phone
plug.
Built-in T/R relay: With SO-239 to antenna and BNC to
rcvr.
Safety interlocks intact and working. She's on the
air.

This one is just like my BC-610E here in the shack,
but the
paint isn't as pretty. Cabinet is in nice shape
otherwise.

Sam KF4TXQ Dadeville, AL (256)825-7305

# 635. Hmm,... that's not on there!

Yahoo group: T-368_BC-610
Date: 2000-09-26 02:17:39 UTC
From: Joe Foley
Topic: 635  Message: 635

Hi List,

While searching for the cause of my lack of full modulation I was checking the speech amp on my supposed "E" model T-368 against the schematic. I didn't find it out of line for it to not match the schematic for the "B" or "C" models but it didn't match the schematic for the "E" either!!

Its got too many caps in it! And its got too many connections on the J-3 socket, pins 2 and 3 have connections that don't show on the schematic.

Could it maybe be an "F" model speech amp on an "E" model Mod deck? No, the connections on the J-3 socket are on the are on the plug, too. Don't know, yet, where they go into the Mod deck.

Does anyone have a schematic for the "F" model mod deck?

This speech amp has the T-11 transformer in it, too.

I suspect the front panel on the RF deck has been changed and this unit is really an "F" model, but I have no way to determine that for sure, yet.

Any ideas?

Joe

# 637. t-3 control connector

Yahoo group: T-368_BC-610
Date: 2000-09-26 12:51:21 UTC
From: Trevor Lewis
Topic: 637  Message: 637

Does anyone have a suggested source for the control connector
plug on the rear of the T-3, down by the power input? I have already
tried Fair Radio and they are out of them.

Absent a source, any ideas of an efficient non-kluge
approach that will keep the T-3 unscarred?

[Non-text portions of this message have been removed]

That's a fairly common one, surprised Fair doesn't have it. You might try William Perry at (502)893-8724 or "Surplus Al" at (717)256-3749.

Hi Trevor,

You've already got a reference to Wm Perry, that'd be my best guess, too. I'm surprised that Fair is out of them, but that's what we've been finding with T-3 parts in general, everybody's out of them.

If it gets critical you could find pins to fit the plug, maybe out of plugs for other radios, and then mold your own plug body out of epoxy, liquid acrylic, or some other stuff. Drilled lexan may be a possibility, too.

Let us know what you come up with, it may shake loose some other ideas.

# 640. Joe's Modulation Problems

Yahoo group: T-368_BC-610
Date: 2000-09-27 18:36:23 UTC
From: Hagan, Reid J
Topic: 640  Message: 640

Joe,
I have heard a few trivia stories about T-3's with low modulation levels that you may want to check, just for the heck of it. Sometimes the simplest things can cause seemingly insurmountable problems. I have heard that the two "pots" (for lack of a better word) that are on the face of the Mod. deck sometimes short over to the inside back of the faceplate, probably due to bending by improper military maintenance over the years. They may show an "arc-over" burn on some rigs. These are the pots labeled "600 OHM LINE GAIN" and "CARBON MIKE GAIN". Depending on which one you're using for your mike/audio input, check each one for proper operation with a VOM. It may be that you have a pot that will not increase (or decrease) the audio level. I seem to remember that you stated that you had little or no control of the modulation level by either the "600 Ohm" or "Carbonium Microphonium" knobs on your rig. I know that you've been perplexed with the Modulation level for a while and maybe it's time to look at the simplest possibilities as a starting point. Good luck!

Reid W2HU

# 641. Re: [T-368_BC-610] Joe's Modulation Problems

Yahoo group: T-368_BC-610

From: Joe Foley
Topic: 640  Message: 641

Hey,

Thanks for the reminder!

I was going to replace both of them because neither one worked right from the beginning, they were in bad shape. I don't know why I haven't done that earlier, no sense looking elsewhere until I get that taken care of.

But back to the speech amp, I was checking caps and found the one from pin 9 on the 12AT7 to ground read shorted so I started tracing the wires to see if they went to ground. Silly me, I thought the schematic would make it easier. Well, it would if I had the right one.

No replies on the "F" schematic yet.

I hope I don't have to make one.

Thanks, Reid,

Joe

Here's a hot one, can someone in the area check this
one out? Hey, Ott, do you know about this guy?

I smell T-368/BC-610 parts!

Joe

# 643. Pot numbers

Yahoo group: T-368_BC-610
Date: 2000-10-01 15:53:56 UTC
From: Joe Foley
Topic: 643  Message: 643

Hi,

Could someone with a T-368 "F" give me the manufacturer's numbers from the back of the mike gain pot. I want to make sure I have the right one in mine, I'd also like to verify that mine is and "F" and not an "E".

Thanks,

Joe

+++++
Thanks, John,

If you have an "F" model T-3 that verifies that
they're the same pots.

Does your speech amp have a T-11 in it, too?

Have you traced the wires from the T-11 transformer
into the mod deck yet?

The mystery deepens,

Joe

So THAT'S what those little mica caps were added to the 872A plate leads in the KW-1 for! And they(those who know?)told me to clip them out to improve audio....huh. Well, that was 10 years ago now, and this proves the old saying...

"You learn something new everyday"

I like my mom's old saying, too(it applies to me more than I'd care to admit)

"It's what you learn after you know it all that counts"

Now, where did I leave those 3B28s......

One thing in their favor, though - nothing looks quite as nice in a dark room as the purple/blue glow of an 866 or 872 that's just lit off...

That's a good question, where did all the BC-610's go? There must have been thousands and thousands produced. Seems like only a small fraction remains within the ham community. I remember seeing a couple of them sitting on an upper outdoor balcony of a hotel in downtown Saigon in 1968. My guess was that they'd been replaced by something more modern by one on the news services.

Subject: F.S. T-368 AM TRANSMITTER 500W From: w9ub w9ub@... Date: 10/13/2000 6:51 PM Eastern Daylight Time Message-id: <39e7932d$0$1593$392904a7@...> I have a T-368 AM transmitter, it is one of the later units with engraved front panels and sealed relays. This transmitter works fine and can be heard on 75 AM phone. The vfo is very stable and it comes with new modulation tubes (4-125's) and six spares plus a new hard to find 6000 tube. The T-368 has a 4-400 tube for the final and a pair of 4-125's for the modulation tubes, it's audio stages have had values changed to make it sound good and this transmitter is in very good condition and works perfectly. Because of the weight of this unit (approximately 700 pounds) it is PICK UP ONLY. Serious calls only or e-mail. Thanks Chuck W9UB Located in New Berlin, WI. which is just west of MIlwaukee. Phone number is: 1-262-679-1721

I can probably tell you what they were used for but where they
went is a puzzle to me. As an ex- seismic exploration (for
oil/gas) surveyor, we used 1600-1800 khz stations along the
coast for a navigation system called "Raydist" and a few other
namebrands that took 2 sta to fix the position (on the same
principle as LORAN). They were used quite extensively on the
Gulf of Mexico and Atlantic coasts.

# 656. Re: [R-390] Good Transmitter?

Yahoo group: T-368_BC-610
Date: 2000-10-19 00:27:17 UTC
From: Joe Foley
Topic: 656  Message: 656

Well, maybe he really does want to sell it and he's
just kidding about the price.

# 660. Heavy Metal Thunder Night!

Yahoo group: T-368_BC-610
Date: 2000-10-30 21:16:17 UTC
From: W2ZR@aol.com
Topic: 660  Message: 660

AM Amateur Radio Reflector - http://www.bigcountry.com/w5ami

Announcing- The 1st Annual 160 Meter Heavy Metal Thunder Rally!

The event you've all been waiting for!

Date: Saturday night, December 23, 2000
Time: From sundown until ?
Frequency: 1885 KHz

QST...QST...QST...

All owner-operators of broadcast rigs [or any QRO gear using high fidelity broadcast components] are hereby invited to participate in the 1st Annual AMI/Electric Radio Heavy Metal rally and QSO party.

The objective is simply to meet and greet friends and to hear some of the finest-sounding radio one could ever hear on the ham bands in one exciting night.

While everyone is welcome, participants are asked to run as close to the legal power limit as possible.
SWLs, other listeners and participants will be asked to send in their vote for the best sounding station to Electric Radio, with the winner receiving an fabulous commemorative trophy.

More details later and in the November issue of Electric Radio.

I never did hear back if someone volunteered to do the BC-610 registry. It was a while ago when I asked. So unless some else is doing it, send me your BC-610 info.

Model:
Manufacturer:
S/N

Both for the BC-610 and BC-614 if you have one. Please include your name and call lso.

The West Coast Military Radio Collectors Group WebSite has been Moved.
The new URL is: http://www.syzen.com/users/milradio/

There are no advertizements and it should be a lot faster as well. I will be redoing the site over the Holidays and would like input as to what you would like to see on the site. Also what browsers is everyone using? Currently I plan to make it compatable with IE 4.0 or greater and Netscape 4.0 or greater. If you are using other browsers, please let me know.

Does anyone know if this is truly the correct part
number for the smaller T-368 vac variable... UCS-300?

Also, does anyone know a source for the 1/2 inch to 1/4
inch adapter?

thanks,
Phil

Phil,

The one in my T-3 says VACAP, CORP Union City, NJ and
its a WC-300-42-10 there's also this number,
SM-B-184928. Patent # 2,511,338.

Ebay causes my browser to crash so I can't check it
for you, problem unknown, will try again later.

Got him!

'nother reugee from the R-390 mailing list.

Very interesting! This solves my T-3 identity problem
I have the same information on the rear corner of my
RF deck. So now I know that my T-3 is an "F" model,
the Modulator deck is an "F", too. The front panel on
the RF deck is silk-screened, not stamped, everything
else is stamped, even the small panels on the RF deck.

Ecco Electronics? Never heard of 'em. That puts "F"
construction after 1967. I wonder if there were any
before that or if any other builders made them.

Another new Ham with a huge rig!!

# 677. Help on Collins VFO

Yahoo group: T-368_BC-610
Date: 2000-11-23 19:43:30 UTC
From: hvalver@hotmail.com
Topic: 677  Message: 677

Maybe some of you military collectors can help me!!!

Have an obviously oscillator subassembly that would
like to consider using for the VFO on the new WARC
ham bands with an old Viking II-CDC that I have
(could use conventional old ham VFO for the older
bands but need something for the 10/18/24 mhz bands.

This unit appears to have "maybe" come out of an
AN/ART-13, Navy TDH (big 5kw jobbie) transmitter
(as that is the only places I have seen these knobs)

All I know is;
1) Has "Colling Part Number 344E" embossed in
top of the subassy.
2) Uses an 837 tube
3) Knob on front (with small revolution counter)
like on ART-13 or TDH
4) Size: 12" deep x 4" wide x 4.5" high.

Does this ring any bells??? Can anyone supply data
(schematic, freq output, etc) or anything at all
on it??

Any/all help/info/input will be greatly appreciated.

Hello,
I am the proud owner of a T-368F transmitter, which has developed a problem. Transformer T6 on the speech amplifier subassembly has gone open primary. This is the transformer which matches the 6C4 plate to the grids of the 4-125 modulator tubes. I am interested in purchasing said transformer, or a complete speech amplifier subassembly, and I would be grateful for any information which you could give me. I do have some exciter plug-ins for parts if anyone wants to trade.

In my T-368F I totally stripped the speech amplifier. Then carefully cut the top of the chassis off. On another piece of aluminum, the same size as the top, I built my current speech processor consisting of a pair of 2E26s and utilizing feedback from the plates of the 4-125s. The input transformer has two secondaries to allow for feedback to the grids of the 2E26s. This is similar to an old RCA scheme used in broadcast gear. I also remounted the same connector as on the old speech amp to the new aluminum plate. When done, I aluminum soldered the plate to the previously stripped speech amp. So it snaps in to the same location as the old one and if anyone ever wanted to they could put an original back in there. I found the original speech amp to be very frequency restrictive and the new on works superbly. 73 - Mike

OK,... so Mr. Mike doesn't want me to reply to
him,..... then I'll just reply to the whole list.

Antique Electronic Supply has a replacement for T-6 of
the speech amp for the T-368, if I remember right its
part number is P-T156 but then've screwed up their
website and the specs for the P-T156 aren't available
anymore, it also doesn't show in their catalog. When
I got mine they had a plain one and one with nickel
steel laminations for better frequency response. It
was only about $15.

Some of you have heard it on the air so you can judge
as to its performance.

Hi Walt,

Don't know if you received any info on ur vfo question? I've been QRT her on the reflector for a couple of months (more like most of the summer 8>( But, the 837 is the tube used in the ART/13...The units were plug in if I recall and there were several depending on the freq band needed...If you learn more...I'd like to know too...I've got a cosmetically very clean ART/13 ready for rehab and a ps project ...

Hi Gang,
I tried to go to KG2IC's website but couldn't find it. Has he moved it somewhere else? It sure has a lot of good info for T-3 users and I wanted to refer a few new listmembers to it. Thanks.

73,
Steve W2ZR

# 690. Manual for the T-368

Yahoo group: T-368_BC-610
Date: 2000-12-02 01:51:30 UTC
From: Joe Foley
Topic: 690  Message: 690

That's T-368 "F"!!

Yes, the "F" model!

A relative is the computer guru at a local university
that has an ROTC program. Out of curiosity I asked if
he'd pursue the elusive T-368F manual for me. The
result is that the CAPTAIN said he HAD one, ... but it
came up missing, ..... "No problem", says the Cpt,
"I'll just get another one through the normal
sources."

That's where I stand today,.......... waiting. But I
have faith in the Cpt.

We just may have an up-to-date manual on the way.

Joe

From: Jim Berry
Topic: 691  Message: 691

Hello test ...

I noticed I was not seeing any of my messages that I thought I had posted to the reflector. Checked my address book, and I was probably just sending the messages to the listowner. Actually it may have been better, that way you do not have to put up with me.

While stirring around on eBay, I did see a complete T-368 that is being auctioned. The price is at $1625, and it lives in CT. I believe the auction number is 513817205.

I also just noticed a fella in BC has up for auction a T-368 exciter deck. The auction number is 1200272049, and I believe it is at $40.00

Test out ...

# 693. KENYON MODULATION XFRMR

Yahoo group: T-368_BC-610
Date: 2000-12-04 13:55:25 UTC
From: James M. Walker
Topic: 693  Message: 693

Greetings Fellow listers,
I have acquired a Kenyon model T-495 125 Watt modulation xfrmr,
I need the pin-out for it, want to match it up to a pair of 811/811A
triodes to modulate my ET-8010 on 160 meters.

Pin out info may be in the "Kenyon Ham Manual" any info would be
greatly appreciated. Thanks
Jim WB2FCN "Real Radio in Buffalo"

Hi Joe,

Sounds like u have a real quest under way...

Re the T-368's here...am on the trail of a pice of alumunum for the 160 tuner...another ham works in fabrication shop the builds industrial electrical cabinets...so if he can find me pice in the scrap bin...shoud be ready to check out the parallel tuner for the dipole...slow going, but when ur scrounging, it takes lots of patience and 'waiting'...

73,

Gene

I recall that someone reproduced this manual a year or so back - can't remember what list, might have seen it while reading through the 'pay for' boatanchors list. I was going to get a copy of it, then I got distracted and forgot about it for a long time.

Someone should recognize the name 'Kenyon' and reply, I would think -

# 696. T368F/URT operation/maintenance manual.

Yahoo group: T-368_BC-610
Date: 2000-12-06 22:58:57 UTC
From: Robert Waidtlow
Topic: 696  Message: 696

Dear members:
As a new member of this group I am very interested in acquiring a complete set of manuals for the T368F series equipment. If anyone can direct me to a place where I can purchase these manuals,I would appreciate if you would Email this information to <robert@...>. In the Army I used the model T368 for teletype transmission at White Sand New Mexico, however I did not keep for myself any of the many manuals that where laying around as only the BC610 were available then to MARS members.I am also looking to buy a F series, so if anyone knows the where abouts in california of one forsale please let me know.
Thanks to all.

Welcome, Robert,

So far we haven't found a source for the "F" model
manual, we weren't even sure there was one. I have a
"maybe" source of one but that hasn't happened yet.

Topic: 700  Message: 700

Hi all,

Finally got to talk to KD0HG in Fort Collins, Colorado
with my T-368E/F. He heard me plainly even with my
poor quality carbon microphone and low modulation.
Gotta get that fixed.

There was a station on later in the night from Santa
Monica, Calif. but I could only hear his voice, no
words came through. I tried to relay through K4KYV
but never did find out if the California station could
actually hear me.

W7QHO, where were you last night? Conditions were
great!

I was told the mighty T-368 was putting a huge signal
into Baltimore, too.

Not sure, Joe - I saw a nice 'F' model a week or so back, went for around $1725, I think. So depending on your position:

Average buyer: WAY too much!
Average seller: I'm in Heaven
Average dealer: Mine is worth three times the highest price paid, probably more
Wealthy buyer: Braggin' rights aren't cheap, if ya can't pay, don't play

How's that?

# 705. Old Military Radio Net, and other stuff.

Yahoo group: T-368_BC-610
Date: 2000-12-19 02:01:03 UTC
From: Joe Foley
Topic: 705  Message: 705

Hi List,

This net is on Saturday mornings at Y-A-W-N,... 5:00 AM. 3.885 MHz. Y-A-A-A-H-h-h-h-m. Then I go to work.

XXXXX

Also, Saturday, December 23, there will be a big get together on 160 Mtrs. for users of former broadcast rigs. Are we left out? I don't think so, T-368's and BC-610's were used for broadcasting, too, in a pinch. They were also used for exciters for bigger rigs.

XXXXXX

SATURDAY IS ALSO,.....!!!!! The 100th year aniversary of AM radio!

We have 74 subscribers to this list, we should be able to make a big presence on the air Saturday. Just in case anyone needed a reason to turn the rig on.

XXXXX

Working on my antenna for 160, that little oak tree in the back is getting quite tall, lots of branches to climb, it grows near the rest of the woods so the back has NO branches sticking out that side. I can pull my center insulator up to about 35 feet, not high, but it'll work. Now, I have enough space to put up a full wave dipole, 260' per side? How tough is it to tune a full wave, or should I just go with a half wave and be happy?

From: W2ZR@aol.com
Topic: 707  Message: 707

Final call for participants and listeners of the 1st Annual AM International Heavy Metal Rally, tonight, December 23 from sundown until ?.

Light up or sit back and listen to our converted vintage broadcast transmitters, military iron like the famous BC-610, and the Collins KW-1s and 30-K.

Frequency: 1885 KHz primary, 1880 (western USA), also try 3885 KHz.

Listeners and participants are asked to send in a vote for the best sounding station to Electric Radio magazine-
14643 County Road G, Cortez, CO 81321-9575
The station tallying the most votes will be awarded a trophy commemorating their hard work and professionalism.

73,

Bill, KD0HG
Rocky Mountain Director
AM International

# 708. Sell or Trade: BC-610 and Accessories

Yahoo group: T-368_BC-610
Date: 2000-12-25 01:47:37 UTC
From: Craig McCartney
Topic: 708  Message: 708

First, this is PICK-UP ONLY, San Francisco Area (for obvious reasons!).

I have a BC-610 system that I want to dispose of. I have not had it on the air since the late '60s (in Germany) so it can only be described as a complete parts system, or a ground-up restoration project for the serious enthusiast. I will provide a complete list of items, including serial numbers, to all serious inquiries. Briefly, the system includes a T-213/GRC-26 (very late model BC-610), a BC-614 speech amp, a set of cables to connect the two, a number of plug-in tuning units for the MO, a number of plug-in coils for the final and several manuals. No antenna tuner, sorry. The tubes have been removed and I may be able to find some of them, but have no idea about their condition.

I am immensely enjoying rebuilding and using R-390A receivers so I would accept in trade one R-390A in pristine condition (HI HI). Seriously, I would be happy to get one in any condition, including a basket case parts unit or an equivalent pile of R-390A spare modules/parts.

If I don't get a reasonable trade offer, I will accept coin of the realm. Any offer with three figures to the left of the decimal point will be considered.

Are you're curious why I am posting this on Christmas Eve? Disposing of this radio is a Christmas present to the woman of my life; she has been after me for a long time to get rid of "that junk". Merry Christmas, Joan.

73,
Craig

# 709. MRCG 2001

Military Radio Collectors Group Meeting 2001

Time to mark your calendars for the sixth annual meeting of the Military Radio Collectors Group (MRCG). The 2001 meeting will be held on the 5th and 6th of May at Camp San Luis Obispo, CA.

Friday will be devoted to equipment setup, operating events and informal get-togethers at the NCO Club and the adjacent RV area. Those wishing to setup and operate may do so under their own calls. The swap meet starts Saturday (6 May) at sunup in the parking area adjacent to the Club, and the formal program will follow at 0900. A full program of speakers and demonstrations will be presented.

Pizza will be available Friday evening and a BBQ lunch is planned for Saturday.

Numerous examples of both vintage and modern equipment will be in operation and on display throughout the meet.

For more information contact Dennis DuVall, W7QHO (w7qho@...); Trish Gibbons, WA6UBE (wa6ube@...); or Hank Brown, W6DJX (htbrown@...).

# 711. BC-610E Coil Unit

Yahoo group: T-368_BC-610
Date: 2000-12-29 15:54:13 UTC
From: hardiem@intergate.ca
Topic: 711  Message: 711

I need to buy or make an 80M coil unit for a BC-610E, the large plug-in one with 5 banana pins in the plate circuit. The designation is C-388-C. Does anyone have a surplus-to-requirements one for sale or know the specs to build one. (dimensions of coils, guages of wire etc.)

# 712. Re: [T-368_BC-610] BC-610E Coil Unit

Yahoo group: T-368_BC-610
Date: 2000-12-29 17:19:11 UTC
From: Jack Taylor
Topic: 711  Message: 712

I have a C-388-A (3.5-4.5 Mc) here. Am of the impression there are two styles, fixed or variable coupling links. The 'A is a fixed coupling link. Which I guess is intended for use with the tuner. No, not for sale.

Looks like 23 turns of # 14 enamaled wire, about 4 inches long and 3.5 inch diameter. The fixed coupling loop is 2 turns of #14 tinned about 3/16 inch spacing and a 1/4 inch from the outside of the primary coil.

73 de Jack

See what you can find in this guys list, there's a
bunch of stuff here.

I have no idea how this guy is to deal with, never
bought anything from him. He's a commercial radio
rapair guy.

His E-mail address is in there somewhere to.

Joe

MY WANTS, TRAFES, AND FREE STUFF;

FREE (if ya cum get um);

It's all FREE but you must cum get it, I don't have
time ta box/ship
it.

GE "Coffin" trans & rec combo's. Pretty sure these are
lowband. 2ea
pairs
avail.

GE Mastr Pro, lowband(6mtr) & Highband(2mtr) 100w
mobiles. Got a bunch
of
um.

GE Mastr Pro Base/Repeater cabinet, still has some
guts in it.

Old Motorola VHF base in cabinet(real old tube type).

APW-11/RT-122B, IFF Transponder.

ARC-4/RT-19, parts radio. Missing trans tubes, Hammed up 110vac pwr sup
installed.

ARN-21/RT-220, TACAN transceiver.Works on 126 xtal controlled channels
900-1200 MHz range. FR-GD cond.

BC-603(or maybe BC-683) vehicular FM receivers. Crummy shape. 2ea

For the VRC-19
T-278 Transmiter, no tubes. DY-98 pwr sup, 2 milk crates full of
modules,
Probably no tubes. some misc manuals.

PP-1398, 28vdc pwr sup ARR-39A.

RA-87, Rectifier 110vac to 110vdc for TTY stuff, Phila 43.
In nice wood transit case(CH-158).

Singer Panadaptor power supply. TMP-1b, 19" rack mnt.

D500-SAN, AC voltage regulator, 95-130vac/7a in 115vac 400cps out.

TT-76/GGC, teletype reperf/trans 2 avail.

MX-6707(AS-1729) Replacement springs, used.

PS-225

ARC-27/dyno

Precision Electronics, Mod 201 Signal Tracer. Uses 6X5, 6SJ7, & 6K6
tubes.
LM-21 Freq meter
ME-9 multi meter
Test Set, Turret Electrical.
TS-538B, signal generator, 1630 & 1730mc.
USM-128, Test Set Electrical Circuit.

B & K 707 Tube checker, looks like crap, works great, w/new set up
charts.

Measurements Mod 111 vintage Xtal calibrator w/man.

Military Test Equipment & Avionics manuals.

Lots more than this, bring a TRUCK!
I mean a TRUCK! No cars, no mini-vans, no
mini-pickups, nothin with
less
than V8 power of U.S. origin preferred.

See my Trade list below for other free stuff.

mailto:military-radio-guy@...
**********
MY TRADE LIST HIGHLIGHTS;
You will note that much of this equipment does have a
price on it, this
means that if I happen to be in a really good mood,
feel sorry for
you, or I'm hard up for money at the time, I might
sell it to you.
I/E I'd still much rather TRADE for something I need!
If there is no
price, the item is most likely not for sale, it's
trade only! So in
every
case, PLEASE study my want list before you ask.

PRC-10, 38-54mc, 950 mw FM backpack transceiver. $80

PRC-25; 30-76mc, FM, 2-4w. First solid state
synthesized backpack
transceiver.
Several avail. (see MCGP Backmail #76)
Got one looks real nasty but works good. $125
New cabinet & battery box for above. $60
ST-138, backpack harness for PRC-25/77. several avail.
$15

PRC-25 Stuff:
RT-505, complete & works, w/battery box, looks like
shit.
Stripped chassis,
Stripped chassis & front panel(w/controls & knobs),
Stripped front panel,
cabinet & battery box(unused),
cabinet & battery box(will need paint).
2ea ST-138 backpack/harness.
Take it all for $250($225 if yu cum get it, will throw
in more crap if
ya
do).

PRC-33, Hand-carried VHF/FM portable transceiver. One
xtal control
channel between 30-42mc, 750mw output. Built in loud
speaker, controls
for vol & sq. Known to have seen service with U.S.Navy
Rescue units in
the Tonkin Gulf, Vietnam(see MCGP Backmail #44). 2
units avail, #1 fair
cond, restorable. #2 poor-fair cond, both with battery
box & the super
hard to find canvas bags. May have one mic, definitely
have mic
connectors, can loan manual.Both $60.

PRC-41, Collins, 225-399.9 mc synthesized, AM backpack
transceiver.Used
by FAC's & ground troops for fighter strike control,
approx 1964-
1980. Ops from ext 24vdc or Batt box, 110vac with
optional
PP-3700(avail).

PRC-47, Collins 2-12mc, 20/100watt SSB/CW/TTY, write.

PRC-64, HF/AM/CW solid state transceiver used by
CIA(Delco 5300), US
Special Forces, and Australain SAS. With all acc, in
nylon bag. (See
MCGP
Backmail #26)

PRC-74/RT-794, Backpack HF,USB/CW transceiver. Ops
2-12mc,15 watts.
Requires 10.5-17vdc. Exc cond.
AS-1887 center loaded whip antenna,
AB-955 rubber spring antenna base support,
MT-3613 antenna mounting bracket,
ST-2743 backpack carry harness.
Headphones, unused. $20
M-80 mic, unused. $8
Antenna, 'H' bar, w/wire unused.
CY-7773, battery box for PRC-74, will need repair. $18
Depo Maint Manuals all models, $20.

PRC-91,(Mot. HT-200), w/telescoping and Rubber Duckie
antennas. $25
(not marked PRC-91 but it's doubtful that any ever
were)

PRC-94, VHF/FM, 2.5w,5ch, HT. U.S. Coast Guard
Property marked(engraved
with fancy bold lettering). W/telescoping & Rubber
Duckie antennas,
charger, bad battery, xtals for Marine Band. By Comco.
$65(these are
not
marked PRC-94 but none ever were) Leather carry case
for above also
avail.

PRC-127, 136-160mc, FM, 2.5w, 14 chan, LCD display,
keypad programmable
HT. W/ant, battery & charger.

Bendix King HT, Commercial version of above, add's 5
watts & scan.
w/ant
chgr & batt $250

See also, CPRC-26, & CPRC-510.

R-390A, need say more? Exc cond.(local pickup only).
#1 By Stewart Warner.
#2 By Elec.Ass.Corp.

R-392, Collins(by Stewart Warner), vehicular version
of the above.
$275($250 if yu cum get it)

R-1410/GR(XE-2);20-150mc, am/fm/cw, solid state, field
port,
rec.Experimental
set developed & hand built by ARVIN in the late 60's
for DF'ing enemy
trans.Has sig/batt mtr, 10/75kc bandwidths, xtal
cal.Ops from ext
24vcd,
110vac, or int"D"cell batteries(12ea).VG cond chkd,
simi operational
$75.00. Man avail.

URC-32(Collins KWT-6), 1.8-30mc, 500watt all mode,
synthesized
transceiver. Mnted in 6' rack cab, used by the
U.S.Navy & Air Force.
w/man. $500(local pickup only)

URC-68, solid state, dual band(VHF/FM & UHF/AM) 4ch,
hand held
transceiver. Originally intended for issue to
helicopter crews in
Vietnam. Saw limited service with Army Rangers &
Special Forces.
$40ea, 2 for $70, 4 for $125

USQ-46, Anti-intrustion detection system. Used from
early-late 70's.
Set includes:
R-1617A/USQ-46, programmable VHF/FM back-pack
receiver(approx 130-200mc
at least). Monitors up to 70 or so sensors at one
time. Can also be
used
as a standard communications scanner. Uses PRC-25/77
type
battery(12vdc),
and audio accessories.
TS-2963/USQ-46, Companion test set to above receiver.
Same size and
appearance. A very elaborate synthesized signal
generator that test all
operational parameters of the system pryer to, or
while in, the field.
w/PP-6446 power supply that clips on to the bottom of
the unit in place
of the battery box.
Torpedo shaped, aircraft deployed, seismic/acoustic

sensor w/auto
deploy
steal tape ground plain antenna, also uses PRC-25/77
type battery.
This was the most high tech gizmo to be used along the
"Macnemara Line"
in Vietnam. In operation the sensor was thrown from an
aircraft either
with, or without a parachute. If with a chute, it was
suspended from
tree
tops by the parachute cords. If without a chute, was
fitted with a
spike
that partially buried the sensor in the ground. In
both cases, a steel
tape type ground plain antenna automatically deployed
from the top of
the
unit. When triggered, alarm & audio signals were
transmitted back to
the
receiver where it's operators could listen in on the
surrounding
activity. Complete set, $450

URT-21, UHF hand/held or air deployable beacon used to
spot drop zones,
or mark the location of downed aircrew. Needs antenna.
$20

URT-33, as above except small, and later model. $25
---
PARA-MILITARY:

DRF-II, small hand held DF receiver used by ground
troops to locate
downed aircrewman, or special ops units to locate air
dropped supplies.
Two telescoping antennas come out the top of the radio
to form a two
element yagi. Haze gray color, solid state, Ops 243mc,
uses 'AA'
batteries(housed in it's pistol type grip).

Eldico SSB-100 MIL, early 50's(military version of ham
SSB-100F)
general
coverage SSB transmitter, VXO controlled. 19" rack
mnt(about the size
of

an R-390), haze gray color. Collin's only SSB
competition. w/manual
$195
(local pickup only).

SA-104(Motorola circa approx early-mid 60's), 4 chan
xtal contr, HF
LSB/USB/AM/CW 100 watt transceiver. Solid state except
for 4 tubes in
transmitter(pair 6146 output tubes). Could be used as
desk top base,
mobile, or simi-portable using separate external power
supply(not
avail).
Ops from 110vac, or variuos DC sources dependant on
the power supply
used. Removed from service with the Missouri State
National Gaurd.
vg-cond $125($100 if you cum get it)

Motorola MX-300 HT Accessories:
Batteries, new, high capacity, by Alexander. Fits all
standard, and "S"
versions. $16ea, 10 for $130
Speaker/mics, fits all versions of MX HT's, unused.
$15ea, 4 for $50
Belt loops holder, fits all standard, & "S" versions.
$10ea, 3 for $25.
Antenna, VHF "rubber duckie", fits all MX versions,
$5ea, 5 for $20.
Charger, 6 radio, $40ea, 2 for $75
Converticom mobile stations w/mic, mnt & cble. $15ea,
10 for $100
Parts avail for standard, "S", & "R" versions
60 watt(plus) external VHF amps. $85

RCA SSB Mark IV, xtal control AM/SSB transceiver. /CD\
marked. W/
manual,
(local pickup only). $200

RF-SB6(Harris) HF SSB/AM, desk top base/mobile
transceiver, uses
Collins
455kc mechfilters, approx 100 watt, 6 chan xtal contr,
110vac ops,
1.6-16mc. It had various(as yet undocumented) military
duties, as the
predecessor to the RF-301, with an original
U.S.government cost of
$4365.00, Circa 1964. Haze gray color. VG-cond. M & F

versions avail
w/manual.

RF-201M, xtal contr mobile solid state AM/SSB
transceiver. W/pwr sup &
manual. $200($150 if yu cum get it)

RF-230S(Harris), 1.6-30mc, all mode, desk top base, or
mobile. Late
model, 125 watt, synthesized/ front panel
programmable. Ops from 12vdc.
With mic, manual, & power cable. Exc cond, this came
from the Canadian
Government(SRC-512) and is so marked. Will swap
towards portable HF/SSB
type, or RF-280.

RF-301, see GRC-165.

RF-401(Harris) VHF/FM transceiver. Desk top base, or
mobile
station(currently wired for 110vac). Mostly solid
state(tube in
output),
50-70 watts. Xtaled up on Marine freqs. $80 2 avail

RF-1525(Harris), 12 chan xtal contr, VHF/FM
mobile/portable
transceiver.
$50 2 avail(xtaled around 160mc)

RT-3, P/O CIA RS-1 or GRC-109, 3-22mc 20w CW
Transmitter. Vg cond.
PP-2684, power supply for above or GRC-109. VG cond.
Both $135($120 if
yu
cum get um)

SPF model AD, Forest Service portable 3-4mc AM/CW
transceiver(1938-1945).
This one has been converted to xtal control on tx &
rec, have most the
parts to restore it, or use it for parts. Marked
Government of the
Province of Alberta(Canada). $45

17A3; Countermeasures rec.Built by General
Electronics.Tunes 30-250mc
in
two bands, am/fm/cw.Bandwidths of NBFM/3/30/300/500kc
& 4mc. Controls

PARTS:

Parts Avail For:
BC-221, BC-348, BC-603, BC-611, BC-728, BC-745,
BC-1000, BC-1306,
GRC-9, GRC-106, GRR-5, PRC-6, PRC-8, PRC-9, PRC-10,
PRC-25, PRC-33,
PRC-35, CPRC-26, PRC-47, PRC-59, PRC-61, PRC-64,
PRC-91, PRC-94, PRT-4,
PRR-9, TCS, R-392, URC-4, URC-64, URC-68.
COMCO 611, SKY-515, TCS, LM-21,
Command Sets(all types), LS-166, LS-454
Motorola MX HT's, xtal, 'S' & 'R' series.

Panel Meters:(all these are military sealed 1.75"
square bezel)
For MD-522, $10
FS 1ma(black face), will work in GRC-106/RT but is not
correct. $8
White face, $5
For RT-66, -67, -68, New replacement meter. $10
FS 50ua(black face), $6
80db,(white face), $5, 2 avail
(I have hundreds of panel meters, all sizes and types,
let me know what
you need. Will make a list and & send it when
finished)

TUBES Thousands of um, ALL types, I'm making list now,
let me know if
you
want a copy when finished, or send me a list of what
you need
---
Crystals:
Crystals Thousands of um, ALL types. Making a list now
that's already
over 26 pages long. What do you need? Want the list?

PRT-4/PRR-9, FSE-38/58,(CR-81): $5ea(51mc $6ea)
46.85mc 2ea, 49.8mc 3ea, 50.2mc, 50.4mc, 51.0mc 7ea
may have others.

PRC-6, CPRC-26(HC-6 CR-23 or CR-52): $5ea
47.2mc 2ea, 47.4mc, 47.6mc 5ea, 48.0mc, 48.6mc 6ea,
48.8mc, 49.0mc 6ea,
49.2mc 6ea, 49.4mc 3ea, 45.300mc, 49.6mc, 50.0mc,
50.2mc, 50.4mc,
50.6mc,
50.8mc 2ea, 51.6mc 2ea, 51.8mc 2ea, 52.0mc, 52.2mc
2ea, 53.2mc 5ea,
53.3mc 2ea, 53.4mc 3ea, 53.6mc 3ea, 53.7mc, 54.0mc
2ea, 54.2mc, 54.8mc,
55.4mc

Also avail for URC-68, PRC-14, PRC-91, PRC-94.
Commercial, CB etc.

TEST EQUIP:
B & K,
510, port trans chkr, w/case, less leads. $15
707 Tube checker, looks like crap, works great, w/new
set up charts.
$40
(or FREE cum get it)

EMC 213 miniature tube chckr. $20.00

Measurements Mod 111 vintage Xtal calibrator w/man.
$15.00
(or FREE cum get it)

Motorola(By Measurements Corp), sig gen, TU-576
(ops aprox 20-500mc w/FM). $35

Precision Electronics, Mod 201 Signal Tracer. Uses
6X5, 6SJ7, & 6K6
tubes. $15(or FREE cum get it)

Sencor,
TR15 trans chkr,$15.00
TF151,Trans/Fet chkr.missing carry handle, $20
TF151A,Trans/Fet chkr,w/leeds.$25

Systron Donner, 101 pulse gen,ops .1kc-10mc,
small/solid state,
w/man.$55.00

RCA VoltOhmist solid state VOM,WV-500A $10.00.
SOLA, constant voltage transformer, 110/220, type 43.
$40 2 avail

Vibrater checker, Vintage set checks 4, 5, & 3
differant 6 pin
vibrators
using 4 light bulbs, needs new cord, $12.00

Military,
BC-221 freq meters. $20.00(got a bunch of um)
LM-21 Freq meter $15.00(or FREE cum get it).
ME-9 multi meter $15.00(or FREE cum get it).
ME-57A, FM modulation meter, ops 20-1000mc, in transit
case. $60
ME-165, watt/SWR meter. Bulkhead mounted meter used
with BC-610,
T-368, T-195 & GRC-106. $55
ME-297 solid state VOM $20.00.
Test Set, Turret Electrical, $10(or FREE, cum get it)
TS-538B, signal generator, 1630 & 1730mc. $10(or FREE,
cum get it)
TS-1301/PSM-13 batt test set for portable radios,
$10.00.
USM-128, Test Set Electrical Circuit. $15 (or free cum
get it).
VO-6E BC-1000 Test osc $10.00.

BC-221's, all different types, metal & wood cabinets,
some fair some
exc
cond. 5ea(OR MORE). all $80($90 if yu cum get um, will
throw in HB pwr
sups & junkers)
---
NON-MILITARY, HAM & MISC;

Alda 103, 3 band(75/40/20 meters) solid state
12vdc(one of the first),
SSB/CW transceiver. Looks/works good. Needs on/off
switch. w/mic. $165

Atlas 210X, solid state SSB transceiver. w/110vac pwr
sup, slide-in mob
mnt(plus an extra), mic, MARS(VXO) xtal adapter, and
man. $275

Bendix Skipper, marine HF/AM transceiver, works 160 or
75mtrs, Plate
modulated 6146, 6 chan xtal contr, built in BC rec,
solid state power
sup, rec, & modulator. Ops from 12vdc, cntrls for vol,
sqlch, chan, BC
tune, ANL.VG cond CHKD.$40.00(or free cum get it)

RCA, CRM-P8A-25, As above except no sqlch or ANL
cntrls,
hybrid rec, GD cond CHKD $40.00(or free cum get it)

Simpson 85, marine HF/AM, $20.00(or free cum get it)

DRAKE TWINS, R-4A rec, T-4X trans, MC-4 pwr sup/spkr,
160-10mtr,
w/orginal boxes & man, $450.

Hallicrafters, SW-500, .55-30mc, 4 band, short wave
receiver. $35

Heathkit GR-78 solid state short wave receiver, w/man
& new nicads.
$50.

Heathkit HWA-2036 110vac/12vdc Power supplies, used
with solid state
mobiles. $25 Several avail.

Midland, 2mtr HT, 5w 135-175mc tx/rec, synthesized,
scan etc. W/spkr
mic,
2ea batts, chrgr, man, & ant. Used very little. $130(I
got PRC-127's
now
so don't need it)

Northern Radio N570, marine HF/AM/SSB $50.00.(or free
cum get it)

Pearce Simpson, Capri VHF Marine, older highbrid
transceiver. $20(or
free
cum get it)

Ray Jefferson, 'Titan' Mod 1425 VHF/FM Marine,
12ch/20watt. $20(or free
cum get it)

Radio Shack, DX-440(by Sangean), 150kc-30mc(plus FM
stereo) digital
portable short wave receiver. $100

Swan(Cubic) 100MXA, 5 band(75-10meter), SSB/CW solid
state transceiver.
W/mic, mob mnt & man. $250

WARD's(Royce?) 40 base CB, $35.

Yeasu FT-709R, 440 HT, w/nicad, charger, ant & man.
$125

Zenith Transoceanic. Working, has wood grain finish
that I can't tell
if
it's original or not. $125

TPL VHF/Amplifiers, 120w/12vdc,1-4w drive(can be
modified for up to 10w
drive), commercial duty will work 2mtrs, PSB or VHF
Marine, w/15ft pwr
cable, PA3-1AE. $90ea, 2 for $170, approx 25 avail

6 METER RADIOS:
Cherokee AH-50, 6mtr/HT FM, 5w, scan, w/rubber duck
ant, nicad batt,
'AA'
batt box, chrgr, belt clip. In box w/manual. $165

Lafayette HE-45b, vintage 6 meter AM transceiver.
w/HE-55 'Squelcher',
mic, HE-6c external VFO, and mobile mount. $45

RCA HT's, Also known as Repco & Comco, lowband version
of PRC-91 & -94.
2
chan, 5 watt, w/carry case & charger.
$35ea, 6 avail.
Accessories for above(with radio only)
Xtals $20 pr pair
52.525mc 2ea pr avail
51mc, 2ea pr avail.
52.260tx/52.76rx 2ea pr avail
46.85-48mc also avail.
Manual, $10 2 avail
Manual, partial copy, $3
Rebuilt nicad battery, $13ea, 3 avail

Ge Porta-Mobile, 2 chan, 15 watt, lunchbox type
portable(removed from
service with the Mo. St. National Guard). Mic
included, choose from
battery boxes or power supplies below. $30ea, 5 avail
Accessories for above:
Xtals(1 pair per radio)
52.525, $20, 2 pr avail.
51.00mc, $20, 2 pr avail
45.12mc, $10, 2 pr avail
45.30mc, $10, 2 pr avail
46.9mc, $10, 2 pr avail
46.7, 46.8 1ea avail
(others also avail, ask)
"D" cell battery box, $8, 3 avail
Nicad battery box/12vdc power supply, $10, 10 avail
Early style charge cable for above, $5, 4 avail
Later model charger for above, $8.00, 3 avail
12vdc power supply, $10, 12 avail

Motorola MT-500 Omni, 2ch/5w, PL, w/ant, batt, chrgr,
new leather
case, H31BBU3124A. Very clean checked $100ea 2 avail
Xtals (1 pair sold with radio only)
52,525mc, $20ea 2 pr avail.
51.00mc, $20ea 2 pr avail.
47.02mc, $10ea, 4 pr avail
47.08mc, $10ea, 4 pr avail

I Need This Stuff For:
BC-9, parts or parts radios, panel meter, all acc.
BC-222/322, BG-71 canvas bags, HS-22 or TS-11E
handsets, BA-32
battery.
BC-654(SCR-284), veh mnt(FM-41)
BC-728, veh mnt(FT-), ant(AN-79 w/canvas pad)
BC-745(SCR-511, 'Pogo-Stick'), T-39 chest unit
(complete or parts), veh
mnt
BC-1000(SCR-300), all haze gray accessories. batteries
BA-70 or BA-80.
BC-1335(SCR-619), mnts veh() & packboard().
DAV/MAB, NT-6(CRF-19046) 6 volt 4 amp hr batt,
vibrator power
supply(CRF-20221), antenna telescoping(CCI-66081),
scull cap/headphones(CTE-49214), also used with the
RBZ.
GRC-109/RS-1, receivers.
GRC-165A(Harris RF-301A), antenna tuner RF-302A,
mic & pwr connectors.
PRC-25, veh mnt(not MT-1029), experimental radios &

parts,
MK-456/GRC, Retranse kit for late model radios sets.
PRC-35, parts & parts radios.
PRC-41, -47, batteries or housing alone(BB-451)
PRC-127, spkr/mics & connectors, program cables, key
pad covers,
carry bags, mobile stations.
R-392, veh mnts, dogbone con.
RT-70, CX-1209 long & CX-1213 dogbone cables,
RT-524(VRC-12), vol contr & knob, rack handles, parts
& parts or good
radios.
(Want to build a repeater with same, so far only have
a parts radio &
diplexer)
SEM-52A,Audio connectors looks like a small 7 pin
U-229,
mate to panel connectors Cannon FBA7R1A01 or
Schattbau VG95351B7.
Handsets, manuals/schematics, xtal/channel boards.
T-195, veh mnts, dogbone connector.
TRC-77, BB-447(A) batt case.
VRC-24, veh mnt, connectors.

OPS Series Radios:
FM-5 & FM-7(Hallicrafters), batt box, veh mnt, all
acc.
FM-5(Motorola)
SBT-22-18(Hallicrafters), Batt box, hnd crnk gen,
parts & parts radios,
all acc.
TR-5, internal boards, parts or parts radios, all acc.

MX-300R(Motorola), batteries, veh station(conn & mics
for same).
---
Misc Stuff Needed:
Small portable all mode HF/VHF. IC-706? Military?
Need a GOOD digital camera to build on our web site
with. Sony?
---
MISC WEAPONS Wanted/Swap;
Wanted:
Many military arms & edged weapons regardles of
vintage.
Long guns(especially carbine, folding stock variants,
& sniper types).

Handguns(especially U.S. Property marked, or WW-II, or
those used with
shoulder stocks). Good shooting examples of P-08,

P-38, Englis Browning
High Power(& acc), Lati 9mm, Radom 9mm, Russian
Tokerev, 1911A1, Smith
1917, Mauser C-96(9mm & acc).

M1 Garand, good shooter, tanker, C or D.
1903 Springfield, good shooter, bayonet(no cut downs),
stripper clips.
1917 Enfield, good shooter, bayonet(no cut downs),
stock & hardware.
1886 Lebel Carbine, bayonet, front barrel band, sling,
8mm Lebel ammo.
Carcono Carbine, sling, 6.5mm ammo & clips.
Enfield Jungle Carbine, 303 stripper clips, bayonet.
AR-15/M-16 preban, short barreled uppers & misc parts,
Colt 1"
rings/mnt.
AK-47, Russian or Chinese preban folder.
M1 Carbine, push button safety, 3 prong mag catch,
rear sights.
Universal or Government "Enforcer" stock.

Bayonets Needed For:(no cut downs)
Garand, 1903 Springfield, M1 Carbine, 1917 Enfield,
Enfield Jungle carbine, 1886 Lebel Carbine, 1870
Veterli.
Various other military knives, swords, & bayonets.

Mags Needed For:
Colt Pony 380, LLama 22lr, IJ TP-22 22lr, M11 steel.
---
Avail Ta Swap Off:
Items For.
AK's, 2ea 100rnd drum mags, new $150ea. 5ea 10rd mags,
$8ea.
Fiberforce stock, unused $30. Ugoslav butt, $10. Gas
tube, $5.
30M1 Carb. M2 slide, late flip safety $5, 2 prong mag
catches $5.
S&K scope mount & steel rings(the best made) $20.

Bayonets & Knives:
SKS Blade, or Spike. $6
SMLE Lithgow, w/scabbard. $45
98 Mauser, German WW-II, w/scabbard & frog. $65
Arasaka, Jap WW-II, early curved guard w/scabbard. $75

1911 45acp, 20rnds, unopened box Frankford Arsenal.
Lot F.A.681.$20
30.06, approx 100rnd belted/linked dummies. $25
NM rear site for M1(Garand), M-1A, M-14.

No 78 Mk 1, UK Sniper scope.(What was this thing used on? When?)
Weaver B6 vintage(El Paso) 6x scope, 3/4" steel tube. $35
Weaver K4 vintage(El Paso) 4x scope, 1" steel tube. $50

1870 Swiss Veterille, 41 cal.(w/6rnds ammo)
1917 Enfield, 30.06(project gun, rear sight ears ground off)
Rem. Mod 11, 12ga riot, US Ord. marked.
Stevens simi auto/bolt action 22. 22s, l, & lr.
Marlin Mod 99 22lr, early, walnut stock, exc cond.

See what you can find in this guys list, there's a
bunch of stuff here.

I have no idea how this guy is to deal with, never
bought anything from him. He's a commercial radio
rapair guy.

His E-mail address is in there somewhere to.

Joe

address
Add Addresses

MY WANTS, TRAFES, AND FREE STUFF;

FREE (if ya cum get um);

It's all FREE but you must cum get it, I don't have
time ta box/ship
it.

GE "Coffin" trans & rec combo's. Pretty sure these are
lowband. 2ea
pairs
avail.

GE Mastr Pro, lowband(6mtr) & Highband(2mtr) 100w
mobiles. Got a bunch
of
um.

GE Mastr Pro Base/Repeater cabinet, still has some
guts in it.

Old Motorola VHF base in cabinet(real old tube type).

APW-11/RT-122B, IFF Transponder.

ARC-4/RT-19, parts radio. Missing trans tubes, Hammed up 110vac pwr sup
installed.

ARN-21/RT-220, TACAN transceiver.Works on 126 xtal controlled channels
900-1200 MHz range. FR-GD cond.

BC-603(or maybe BC-683) vehicular FM receivers. Crummy shape. 2ea

For the VRC-19
T-278 Transmiter, no tubes. DY-98 pwr sup, 2 milk crates full of
modules,
Probably no tubes. some misc manuals.

PP-1398, 28vdc pwr sup ARR-39A.

RA-87, Rectifier 110vac to 110vdc for TTY stuff, Phila 43.
In nice wood transit case(CH-158).

Singer Panadaptor power supply. TMP-1b, 19" rack mnt.

D500-SAN, AC voltage regulator, 95-130vac/7a in 115vac 400cps out.

TT-76/GGC, teletype reperf/trans 2 avail.

MX-6707(AS-1729) Replacement springs, used.

PS-225

ARC-27/dyno

Precision Electronics, Mod 201 Signal Tracer. Uses 6X5, 6SJ7, & 6K6
tubes.
LM-21 Freq meter
ME-9 multi meter
Test Set, Turret Electrical.
TS-538B, signal generator, 1630 & 1730mc.
USM-128, Test Set Electrical Circuit.

B & K 707 Tube checker, looks like crap, works great, w/new set up
charts.

Measurements Mod 111 vintage Xtal calibrator w/man.

Military Test Equipment & Avionics manuals.

Lots more than this, bring a TRUCK!
I mean a TRUCK! No cars, no mini-vans, no
mini-pickups, nothin with
less
than V8 power of U.S. origin preferred.

See my Trade list below for other free stuff.

mailto:military-radio-guy@...
**********
MY TRADE LIST HIGHLIGHTS;
You will note that much of this equipment does have a
price on it, this
means that if I happen to be in a really good mood,
feel sorry for
you, or I'm hard up for money at the time, I might
sell it to you.
I/E I'd still much rather TRADE for something I need!
If there is no
price, the item is most likely not for sale, it's
trade only! So in
every
case, PLEASE study my want list before you ask.

MISC MILITARY:

JATO Pack, Mk 128, Mod 1, Rocket Motor. 2 avail, $150
pair(local pick
up
only)

6 x 6 Truck Bed, desert tan, 12' x 9', w/side boards &
seats, $275

Trailer, M-109, 1 1/2 ton, $250

Trailer, 1952 Bantum, Jeep. $600

Trailer, M-116, 1969, dual generator(less generators),
3/4 ton, w/ribs.
$275

Headphones, Navy Type CW-49507A". Used WW-II - 60's as
replacement for
HS-30 in Army & Navy. Correct for BC-1306, GRC-9,
GRR-5 etc. 600ohm, 8"
cord, PL-54 plug, with 5' extension cable & PL-55(1/4"
phone plug). NIB
w/man, $9.00ea(only a couple left)

M-4 Cap Blasting wire spools. Hand held spool of MANY
feet of wire.
Twin

lead stranded, rubberized(makes GREAT speaker wire).
$5ea about 20
avail.

Nicad Battery, packs for PRC-68, -126 etc. 15v
800mhr. Housed in
reusable aluminum battery box. New in sealed boxes.
$25, 4 avail

Printers, military field portable, small, housed in
water tight
cabinet,
CARC color, uses standard ribbons, missing screws & ?.
2ea for $40(or
FREE cum get um)

Tent poles & stakes for shelter halves, Dated in the
60's, unused. 20
or
more pole sections + 12 or more stakes. All $30 (or
FREE cum get um)

cabinet & battery box(will need paint).
2ea ST-138 backpack/harness.
Take it all for $250($225 if yu cum get it, will throw
in more crap if
ya
do).

PRC-33, Hand-carried VHF/FM portable transceiver. One
xtal control
channel between 30-42mc, 750mw output. Built in loud
speaker, controls
for vol & sq. Known to have seen service with U.S.Navy
Rescue units in
the Tonkin Gulf, Vietnam(see MCGP Backmail #44). 2
units avail, #1 fair
cond, restorable. #2 poor-fair cond, both with battery
box & the super
hard to find canvas bags. May have one mic, definitely
have mic
connectors, can loan manual.Both $60.

PRC-41, Collins, 225-399.9 mc synthesized, AM backpack
transceiver.Used
by FAC's & ground troops for fighter strike control,
approx 1964-
1980. Ops from ext 24vdc or Batt box, 110vac with
optional
PP-3700(avail).

PRC-47, Collins 2-12mc, 20/100watt SSB/CW/TTY, write.

PRC-64, HF/AM/CW solid state transceiver used by
CIA(Delco 5300), US
Special Forces, and Australain SAS. With all acc, in
nylon bag. (See
MCGP
Backmail #26)

PRC-74/RT-794, Backpack HF,USB/CW transceiver. Ops
2-12mc,15 watts.
Requires 10.5-17vdc. Exc cond.
AS-1887 center loaded whip antenna,
AB-955 rubber spring antenna base support,
MT-3613 antenna mounting bracket,
ST-2743 backpack carry harness.
Headphones, unused. $20
M-80 mic, unused. $8
Antenna, 'H' bar, w/wire unused.
CY-7773, battery box for PRC-74, will need repair. $18
Depo Maint Manuals all models, $20.

PRC-91,(Mot. HT-200), w/telescoping and Rubber Duckie
antennas. $25
(not marked PRC-91 but it's doubtful that any ever
were)

PRC-94, VHF/FM, 2.5w,5ch, HT. U.S. Coast Guard
Property marked(engraved
with fancy bold lettering). W/telescoping & Rubber
Duckie antennas,
charger, bad battery, xtals for Marine Band. By Comco.
$65(these are
not
marked PRC-94 but none ever were) Leather carry case
for above also
avail.

PRC-127, 136-160mc, FM, 2.5w, 14 chan, LCD display,
keypad programmable
HT. W/ant, battery & charger.

Bendix King HT, Commercial version of above, add's 5
watts & scan.
w/ant
chgr & batt $250

See also, CPRC-26, & CPRC-510.

R-390A, need say more? Exc cond.(local pickup only).
#1 By Stewart Warner.
#2 By Elec.Ass.Corp.

R-392, Collins(by Stewart Warner), vehicular version
of the above.
$275($250 if yu cum get it)

R-1410/GR(XE-2);20-150mc, am/fm/cw, solid state, field

rec.Experimental
set developed & hand built by ARVIN in the late 60's
for DF'ing enemy
trans.Has sig/batt mtr, 10/75kc bandwidths, xtal
cal.Ops from ext
24vcd,
110vac, or int"D"cell batteries(12ea).VG cond chkd,
simi operational
$75.00. Man avail.

URC-32(Collins KWT-6), 1.8-30mc, 500watt all mode,
synthesized
transceiver. Mnted in 6' rack cab, used by the
U.S.Navy & Air Force.
w/man. $500(local pickup only)

URC-68, solid state, dual band(VHF/FM & UHF/AM) 4ch,
hand held
transceiver. Originally intended for issue to
helicopter crews in
Vietnam. Saw limited service with Army Rangers &
Special Forces.
$40ea, 2 for $70, 4 for $125

USQ-46, Anti-intrustion detection system. Used from
early-late 70's.
Set includes:
R-1617A/USQ-46, programmable VHF/FM back-pack
receiver(approx 130-200mc
at least). Monitors up to 70 or so sensors at one
time. Can also be
used
as a standard communications scanner. Uses PRC-25/77
type
battery(12vdc),
and audio accessories.
TS-2963/USQ-46, Companion test set to above receiver.
Same size and
appearance. A very elaborate synthesized signal
generator that test all
operational parameters of the system pryer to, or
while in, the field.
w/PP-6446 power supply that clips on to the bottom of
the unit in place
of the battery box.
Torpedo shaped, aircraft deployed, seismic/acoustic

sensor w/auto
deploy
steal tape ground plain antenna, also uses PRC-25/77
type battery.
This was the most high tech gizmo to be used along the
"Macnemara Line"
in Vietnam. In operation the sensor was thrown from an
aircraft either
with, or without a parachute. If with a chute, it was
suspended from
tree
tops by the parachute cords. If without a chute, was
fitted with a
spike
that partially buried the sensor in the ground. In
both cases, a steel
tape type ground plain antenna automatically deployed
from the top of
the
unit. When triggered, alarm & audio signals were
transmitted back to
the
receiver where it's operators could listen in on the
surrounding
activity. Complete set, $450

URT-21, UHF hand/held or air deployable beacon used to
spot drop zones,
or mark the location of downed aircrew. Needs antenna.
$20

URT-33, as above except small, and later model. $25
---
PARA-MILITARY:

DRF-II, small hand held DF receiver used by ground
troops to locate
downed aircrewman, or special ops units to locate air
dropped supplies.
Two telescoping antennas come out the top of the radio
to form a two
element yagi. Haze gray color, solid state, Ops 243mc,
uses 'AA'
batteries(housed in it's pistol type grip).

Eldico SSB-100 MIL, early 50's(military version of ham
SSB-100F)
general
coverage SSB transmitter, VXO controlled. 19" rack
mnt(about the size
of

an R-390), haze gray color. Collin's only SSB
competition. w/manual
$195
(local pickup only).

SA-104(Motorola circa approx early-mid 60's), 4 chan
xtal contr, HF
LSB/USB/AM/CW 100 watt transceiver. Solid state except
for 4 tubes in
transmitter(pair 6146 output tubes). Could be used as
desk top base,
mobile, or simi-portable using separate external power
supply(not
avail).
Ops from 110vac, or variuos DC sources dependant on
the power supply
used. Removed from service with the Missouri State
National Gaurd.
vg-cond $125($100 if you cum get it)

Motorola MX-300 HT Accessories:
Batteries, new, high capacity, by Alexander. Fits all
standard, and "S"
versions. $16ea, 10 for $130
Speaker/mics, fits all versions of MX HT's, unused.
$15ea, 4 for $50
Belt loops holder, fits all standard, & "S" versions.
$10ea, 3 for $25.
Antenna, VHF "rubber duckie", fits all MX versions,
$5ea, 5 for $20.
Charger, 6 radio, $40ea, 2 for $75
Converticom mobile stations w/mic, mnt & cble. $15ea,
10 for $100
Parts avail for standard, "S", & "R" versions
60 watt(plus) external VHF amps. $85

RCA SSB Mark IV, xtal control AM/SSB transceiver. /CD\
marked. W/
manual,
(local pickup only). $200

RF-SB6(Harris) HF SSB/AM, desk top base/mobile
transceiver, uses
Collins
455kc mechfilters, approx 100 watt, 6 chan xtal contr,
110vac ops,
1.6-16mc. It had various(as yet undocumented) military
duties, as the
predecessor to the RF-301, with an original
U.S.government cost of
$4365.00, Circa 1964. Haze gray color. VG-cond. M & F

versions avail
w/manual.

RF-201M, xtal contr mobile solid state AM/SSB
transceiver. W/pwr sup &
manual. $200($150 if yu cum get it)

RF-230S(Harris), 1.6-30mc, all mode, desk top base, or
mobile. Late
model, 125 watt, synthesized/ front panel
programmable. Ops from 12vdc.
With mic, manual, & power cable. Exc cond, this came
from the Canadian
Government(SRC-512) and is so marked. Will swap
towards portable HF/SSB
type, or RF-280.

RF-301, see GRC-165.

RF-401(Harris) VHF/FM transceiver. Desk top base, or
mobile
station(currently wired for 110vac). Mostly solid
state(tube in
output),
50-70 watts. Xtaled up on Marine freqs. $80 2 avail

RF-1525(Harris), 12 chan xtal contr, VHF/FM
mobile/portable
transceiver.
$50 2 avail(xtaled around 160mc)

RT-3, P/O CIA RS-1 or GRC-109, 3-22mc 20w CW
Transmitter. Vg cond.
PP-2684, power supply for above or GRC-109. VG cond.
Both $135($120 if
yu
cum get um)

SPF model AD, Forest Service portable 3-4mc AM/CW
transceiver(1938-1945).
This one has been converted to xtal control on tx &
rec, have most the
parts to restore it, or use it for parts. Marked
Government of the
Province of Alberta(Canada). $45

17A3; Countermeasures rec.Built by General
Electronics.Tunes 30-250mc
in
two bands, am/fm/cw.Bandwidths of NBFM/3/30/300/500kc

for same).
---
Misc Stuff Needed:
Small portable all mode HF/VHF. IC-706? Military?
Need a GOOD digital camera to build on our web site
with. Sony?
---
MISC WEAPONS Wanted/Swap;
Wanted:
Many military arms & edged weapons regardles of
vintage.
Long guns(especially carbine, folding stock variants,
& sniper types).

Handguns(especially U.S. Property marked, or WW-II, or
those used with
shoulder stocks). Good shooting examples of P-08,

P-38, Englis Browning
High Power(& acc), Lati 9mm, Radom 9mm, Russian
Tokerev, 1911A1, Smith
1917, Mauser C-96(9mm & acc).

M1 Garand, good shooter, tanker, C or D.
1903 Springfield, good shooter, bayonet(no cut downs),
stripper clips.
1917 Enfield, good shooter, bayonet(no cut downs),
stock & hardware.
1886 Lebel Carbine, bayonet, front barrel band, sling,
8mm Lebel ammo.
Carcono Carbine, sling, 6.5mm ammo & clips.
Enfield Jungle Carbine, 303 stripper clips, bayonet.
AR-15/M-16 preban, short barreled uppers & misc parts,
Colt 1"
rings/mnt.
AK-47, Russian or Chinese preban folder.
M1 Carbine, push button safety, 3 prong mag catch,
rear sights.
Universal or Government "Enforcer" stock.

Bayonets Needed For:(no cut downs)
Garand, 1903 Springfield, M1 Carbine, 1917 Enfield,
Enfield Jungle carbine, 1886 Lebel Carbine, 1870
Veterli.
Various other military knives, swords, & bayonets.

Mags Needed For:
Colt Pony 380, LLama 22lr, IJ TP-22 22lr, M11 steel.
---
Avail Ta Swap Off:
Items For.
AK's, 2ea 100rnd drum mags, new $150ea. 5ea 10rd mags,
$8ea.
Fiberforce stock, unused $30. Ugoslav butt, $10. Gas
tube, $5.
30M1 Carb. M2 slide, late flip safety $5, 2 prong mag
catches $5.
S&K scope mount & steel rings(the best made) $20.

Bayonets & Knives:
SKS Blade, or Spike. $6
SMLE Lithgow, w/scabbard. $45
98 Mauser, German WW-II, w/scabbard & frog. $65
Arasaka, Jap WW-II, early curved guard w/scabbard. $75

1911 45acp, 20rnds, unopened box Frankford Arsenal.
Lot F.A.681.$20
30.06, approx 100rnd belted/linked dummies. $25
NM rear site for M1(Garand), M-1A, M-14.

No 78 Mk 1, UK Sniper scope.(What was this thing used on? When?)
Weaver B6 vintage(El Paso) 6x scope, 3/4" steel tube. $35
Weaver K4 vintage(El Paso) 4x scope, 1" steel tube. $50

1870 Swiss Veterille, 41 cal.(w/6rnds ammo)
1917 Enfield, 30.06(project gun, rear sight ears ground off)
Rem. Mod 11, 12ga riot, US Ord. marked.
Stevens simi auto/bolt action 22. 22s, l, & lr.
Marlin Mod 99 22lr, early, walnut stock, exc cond.

# 716. Happy New Year!

Yahoo group: T-368_BC-610
Date: 2001-01-01 21:29:00 UTC
From: Joe Foley
Topic: 716  Message: 716

Hi,

Happy New Millenium, too.

We've got 75 subscribers now and registries for both
the BC-610 and the T-368.

I have some equipment on order that I will share with
the list if it comes through and I am still working on
getting a copy of the "F" manual with schematics. No
progress through the holidays though.

Not much air time so far, heard no one from this list
on 75 mtrs this weekend. That's the only antenna I
have at present. I did hear several BC-610's on
though, one from Alabama and another from Texas.
There are several in the North East, too. I didn't
hear anyone using a T-3 this weekend.

We have a chatroom associated with the egroups.com
list provider if anyone's interested. Its at the
T-368_BC-610 site at the egroups page.

--- Bill Coleman N2BC <n2bc@...> wrote:
> Anybody have the specs for the 6000 driver in the
> T-3?
++++++++
Hi Bill,

I checked some sites that have data sheets and didn't find the 6000.

But KA3OTT was kind enough to send me several sheets concerning tubes found in the T-368's.

For the 6000 he shows:

Fil volts: 26.5 @ 0.028amp.

Plate watts: 25 max.

Plate Volts: 600 max.

Screen Volts: 300 max.

Screen Watts: 4.0 max.

Interelectrode Capacitance in Pf

Input: 15

Output: 7.0

Grid to Plate: 0.018

Typical service as Class "C" Amplifier

Plate Volts @ 600

Screen Volts @ 225

Grid Bias @ -60

Plate mA @ 100

Screen mA @ 18

Pwr. Out @ 35

Then if:

Plate Volts @ 400

Screen Volts @ 200

Grid Bias @ -60

Plate mA @ 125

Screen mA @ 16

Pwr. Out @ 28

It also shows pin out and dimensions if you want them.

But on another note:

I had the pleasure to chat with two members of the
list last night, WF2U, Meir and K2AUS, Don.

The conditions were great and both sounded very strong
here in Western NY.

For some reason neither were using their T-3's,
Hmmm,..... gotta work on that.

We need another on-air get together to blow out the
bugs.

Like that errant lady bug that stunk up my R-390A.

Any suggestions?

Joe KG2CI

Topic: 724  Message: 726

Hello T-3 Groupies,

I'll tell you why I didn't use the T-3 last night: conditions were good and why use 500 W when 120 W makes it just fine... Besides, I consider the B&W 5100B I used last night as the little brother of my B&W manufactured T-3. ;-)

Some people used the 2E26 successfully by rewiring the 6000 socket. The 6000 is sort of like the 2E26 with the plate wired into the socket instead of the top plate cap...

73, Meir WF2U

++++++++
Hi Bill,

I checked some sites that have data sheets and didn't find the 6000.

But KA3OTT was kind enough to send me several sheets concerning tubes found in the T-368's.

For the 6000 he shows:

Fil volts: 26.5 @ 0.028amp.

Plate watts: 25 max.

Plate Volts: 600 max.

Screen Volts: 300 max.

Screen Watts: 4.0 max.

Interelectrode Capacitance in Pf

Input: 15

Output: 7.0

Grid to Plate: 0.018

Typical service as Class "C" Amplifier

Plate Volts @ 600

Screen Volts @ 225

Grid Bias @ -60

Plate mA @ 100

Screen mA @ 18

Pwr. Out @ 35

Then if:

Plate Volts @ 400

Screen Volts @ 200

Grid Bias @ -60

Plate mA @ 125

Screen mA @ 16

Pwr. Out @ 28

It also shows pin out and dimensions if you want them.

But on another note:

I had the pleasure to chat with two members of the
list last night, WF2U, Meir and K2AUS, Don.

The conditions were great and both sounded very strong
here in Western NY.

For some reason neither were using their T-3's,
Hmmm,..... gotta work on that.

We need another on-air get together to blow out the
bugs.

Like that errant lady bug that stunk up my R-390A.

Any suggestions?

Joe KG2CI

All,

The 25AV5 TV tube works well as a substitute for the 6000. Same pin-out as the 6000 but don't just plug it straight in, though, because the plate current will be too high. The screen circuit must be modified by replacing R120 (the original screen dropping resistor) with a 15K 10W unit and adding a 25K ww pot to ground. The screen is then fed from the arm on the pot which I mounted on a bracket behind the front panel. Adjusting the pot for 25 - 30 ma driver plate current gives 10-12 ma drive to the 4-400 on all bands.

I modified my Basic as above several years ago when 6000s were very hard to find, and have been using it regularly with the original 25AV5 in place ever since. I note that 6000s are easy to get nowadays, though, and the tubes seem to stand up very well so I wouldn't recommend substitutions (25AV5 or otherwise) at this point.

Glad to finally see some specs on the 6000, BTW. Was this tube used anywhere else besides the T-368???

Just in case anyone needs a spare.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1213554478

Also, we're up to 79 members on this list.

There is a chatroom available on the home page for the
list as well as file space for whatever the members
need. Maybe we can upload tube specs or pictures of
our rigs.

Now, how do I find out if anyone has problems with the
change over to Yahoo? Hmmm,..... can't really post
that question here.

If you can't read this let me know?

Hi,
I have contacted Bruce about resurrecting that site for him. I'll gladly make it available again as soon as I hear back from Bruce. I printed out the whole thing before Bruce took it off line but it would be much easier if I get it the disc.

73,

Categories: Broadcast Transmitters No Photo Ad Number: 1998 Date Posted: 02/01/2001 Contact: Charles Wheaton, Kansas Telephone: E-Mail: Reply to Ad (http://www.dealamerica.com/deal/cgi-bin/ads/bcads.cgi?display_reply_form_button=on&results_format=off&db_id=1998&exact_match=on&query=retrieval) Web Site: Description This c.1965 beauty started out at KSD in St. Louis and was bought by KCMO in Kansas City in 1990. KCMO had the unit overhauled and retuned to 810Khz with all transformers replaced with non-PCB to make re-installation EPA legal. Was to have been their back-up transmitter, but the station was sold and the new owner put in a new 50KW model and the RCA became surplus to needs. A Cadillac of AM three cabinet model rated at 5.4KW continuous. Complete with all tubes, Gates control board and Harris limiter. Very good condition. Requires three-phase 220v, as-is. Price unmodified is $5,000. Modified to single-phase and 160m frequency of choice for additional $700. Price includes crating and shipping to your nearest major airport terminal. Trades considered. Serious inquiries may call (785) 396-4554 Charles W0EI [Non-text portions of this message have been removed]

Ooooooook, guys,

Here's one for whatever its worth, there are some on
this list who can do the shipping, and some who live
in the same area so shipping isn't that big of a deal.

I believe its all in the UK.

thanks for reading,

Joe

# 756. The Mighty T-368 Strikes again!!

Yahoo group: T-368_BC-610
Date: 2001-03-08 05:53:34 UTC
From: Joe Foley
Topic: 756  Message: 756

The Coast to Coast Collins Collectors Association
"First Wednesday Net" allowed me to finally push my
T-3 out to California to talk to N6PY, the West Coast
Net Control.

This is with only a coax fed Inverted "V" at 35'.

I was able to check into the net at every control
station acrossed the country.

Big deal for me, this is my first HF station, only
been on the air for about one year.

This net is the first Wednesday of every month on
3.885(+/-) MHz. It started last month, Collins
equipment isn't required to check in, it has more of
an AM focus.

How many times have you seen a PILE-UP of AM stations?
The control operators were overwhelmed!

It was GOOD!!

Later,

Joe KG2CI

Hey Joe,
Good signals by all, I heard you while "VJB" was conducting the East Coast portion, had to go back upstairs after that. Very nice signal from your T-368. Looking good. Also wasn't that the greatest pile-up since ever, I was hearing stations from Texas and the mid west trying to check-in with "VJB" not strong but good and readable. I think the system needs an NCS and also relay stations to make sure all stations at least get acknowledged as having checked in. My final word on the subject "EXCELLENT"

# 760. T-368 Tuning Cards

Yahoo group: T-368_BC-610
Date: 2001-03-08 17:36:22 UTC
From: Joe Foley
Topic: 760  Message: 760

HI List,

Does anyone have interest in buying a reproduction
set of tuning cards for their T-368. I have a source
who can reproduce these if there's enough interest.

These are the ones that go into the pocket on the side
of the transmitter.

Let me know,

Joe

What time does that 3885 AM net kick in?

I can normally hear activity on my AR88D in the house after 2300z. Might go out to the shack now the nights are warmer here and fire up the 390s.

# 762. Meissner S.S. - BC-610 M.O. Stability Improvement Tip

Yahoo group: T-368_BC-610
Date: 2001-03-09 02:50:32 UTC
From: N4QNX@aol.com
Topic: 762  Message: 762

I tested a quanity of 6V6GTs in a Meissner Signal Shifter rebuilding project and found that some makes of 6V6s are much better than others in regards to warmup drift, long term drift, quality of note, keying, and isolation of the control grid circuit from loading in the plate circuit from keying in a following stage, etc. Raytheon 6V6s are excellent and give very good results in the BC-610 M.O. as well as in a Meissner Signal Shifter. Late production (Not WWII Surplus) Sylvania 6V6s are also very good oscillators. 6V6GTAs of either manufaturer are good. RCA and late production GE (KenRad) are the worst and should not be used. I used to use a separate exciter with the BC-610 here at N4QNX but now have a Sylvania 6V6 tube in the oscillator stage of the BC-610 exciter with good all around performance for a keyed VFO stage. On the air operation is much better than with the original GE-KenRad tube or with RCA 6V6Ys tried. 73, DeWitt Clay N4QNX Lynchburg, Virginia

Subject: [T-368_BC-610] T-368 Tuning Cards

HI List,

Does anyone have interest in buying a reproduction
set of tuning cards for their T-368. I have a source
who can reproduce these if there's enough interest.

These are the ones that go into the pocket on the side
of the transmitter.

Let me know,

Joe

# 764. Clarification: Recommended 6V6 Oscillator Tubes for ECO- M.O. use

Yahoo group: T-368_BC-610
Date: 2001-03-10 02:36:40 UTC
From: N4QNX@aol.com
Topic: 764  Message: 764

The recommended types for use as oscillators in BC-610s, Meissner EX S.S., etc. are 1. Raytheon 6V6GT, 6V6GTA; 2. Sylvania 6V6GT (late production - from 1950s to early 1960s), Sylvania 6V6GTA. Sylvania produced and branded 6V6s for others and these such as Magnavox are good too.Metal types of the various makes tested did not perform as well as the Raytheon and Sylvania 6V6GT versions. 6V6Y and 6V6GTY versions by RCA for RF use gave very poor results in the two S.S. here and in the BC-610-G.

# 765. R-390A

Yahoo group: T-368_BC-610
Date: 2001-03-10 02:46:53 UTC
From: Roy Longworth
Topic: 765  Message: 765

I realise this is the group for AM transmitters, but many of the T-368 users also have the R-390A reciever .... my reciever has developed a problem with the signals below 8MHZ, and the signals below 8MHZ come on for about 10-15 seconds and then go dead for about 30 seconds... it seems like a heat problem since as soon as I turn the unit on, the signal stay longer, but as the reciever is left on longer the reciever gradually gets to a stage where the signals never come on below 8 mhz... the signals above 8mhz, work fine all the time.... Any suggestions as to where I start to look to solve the problem? Thanks Roy w9qm

# 767. T-368 TROUBLE

Yahoo group: T-368_BC-610
Date: 2001-03-11 01:04:21 UTC
From: Roy Longworth
Topic: 767  Message: 767

I am trying to get my T-368 F back up and running after an 18 month period of inctivity on AM... the unit loads ok into the dummy load, and the audio shows good modulation on the EXCITATION meter.... but the plate current goes down significantly when I modulate,and the power output decreases on modulation ,I tried reversing the plate leads to the 4-125a's but still the same result.... any suggestions as to where to start to get the plate current to the 4-400 to stabilise.
If one of the 4-125's is weak, could this cause this problem?
Thanks Roy W9QM.

You might be right, Jeff.

I like to exclude the easy stuff first.

HV audio chain? Can you think of more details of where
to look in regards to this one?

>
> While I'm at it, I'm looking for a modulation

The only help I can be there is that one went on E-bay
last year, not too bad on price either. Maybe one
will turn up again.

>
> Anyone have a transformer?
>
> Will the T-368 Mod transformer work as the one does

From: N4QNX@aol.com
Topic: 773  Message: 773

Yes, that is right. I have found here that most problems due to drift, poor note, etc. are due to a particular manufacturers poor tube design and not with the circuit itself. KK4AM Duane and I have also found that it is helpful to select tubes for the 6L6 and 807 stages to further stabilize the exciter's performance. We have speculated that tube selection may have been performed at the factory as well in order to get problem free operation of the rig. The set of tubes I have now in the rig works pretty well. Operation of the rig's exciter as I originally received it then convinced me that it was of poor design. Well, to furhter answer your question I used to drive the 807 IPA directly with a Meissner EX S.S. I did this by winding a link coupling coil on the Buffer/Multiplier coil in a spare tuning unit. Some time later the tuning cap for the 807s tank shorted out. You may have noticed that the 807 tank, which is identical to that of the 6L6 stage, runs rather hot. After that cap shorted out and not having a replacement readily at hand, I got the idea to try one of the selected 6V6GTs in the BC-610s M.O. stage with another tuning unit. The performance was pretty good especially for a power oscillator circuit of 1940 vintage. 73, DeWitt

The 610 I dragged home last weekend, unloaded it by myself too, has a plug for the xtal socket that was made for a TTY/FSK adapter. Seems a BoatAnchor VFO should work OK into that socket. I rebuilt an EICO 722 that is stable after abt 60 mins warm up..will try it.

DeWitt, that's especially interesting news for me as am in the process of restoring a BC-610 exciter. Am looking forward to powering it up!

One of the locals who was an NCOIC of a post WWII transmitter site, said he used BC-221's on his '610's because of the MO instability plus time delays in getting xtals for the units.

I subsequently picked up a BC-221, but it too drifts! Maybe we'll look into tube substitution for it :-)

# 779. Meissner Pre-War & Post-War VFO Exciters

Yahoo group: T-368_BC-610
Date: 2001-03-12 04:27:04 UTC
From: N4QNX@aol.com
Topic: 779  Message: 779

I've rebuilt a couple of EX model Signal Shifters. The first one came with a TungSol Metal 6V6 and it turned out to be a good oscillator so I got a good impression of the Post-War S.S. That S.S. is now used in W3NCC's station. The second unit had been highly modified and moderized by W2GHK (Silent Key). I was lucky enough to round up all the original parts to put it back to together with. Well, it turned out pretty good and this is the unit used to examine various makes of 6V6s. Meissner would have helped themselves and the ham community by selecting tubes at the factory like Tektronix's did for their oscilloscopes. It is very easy to set the frequency with an EX model and is a great improvement over using the eraser end of a pencil to vernier adjust the MO control in a BC-610 tuning unit. I wouldn't try to claim that the performance of this equipment is as good as say an ART-13 or T-368 Collins PTO but is pretty good for ham gear of the period. 73, DeWitt

Joe,

What to heck is that vacuum variable worth anyway?? It's already
up to $100.00 and has several days left!

Tom Nicholson

The smaller one is $809 new from Jennings. No guess on the bigger one but let's say it's probably more. I figured it would sell for $100 but it will probably bring more. If you have one for a spare, you can pretty much guarantee you'll never need it. You know how it goes.

The big vacuum variable in my RF deck is broken, so I need one. Just not that badly. ;)

Maybe if I had the rest of the transmitter I'd be more willing to pay a lot.

Tom,

Well, probably $175 or so. I paid $200 for an NOS one to
fit my T-368...they can be hard to find and they are sought
after by people building big amps. There is one fairly
frequent buyer on eBay for vac variables....you'll see
his ID come up often. BTW, I'm glad I spent the money
for mine even though it is new and doesn't look quite
original since it has some blue paint on it....the good
news is that it has a 1/4" shaft :-)

Well Guys,
Theres a place in California, Davilyn Electronics, that still sells them for $650-$950, and thats used/checked. The price of vacuum variables seems to be closely connected to the Gold market Hi.
Seriously, if you get one used in the T-368 tune/load expect to pay around 300-500 depending on who is selling it.

Trevor,
I've been in the Radio/TV transmitter business a long while, since the
1960s. I only seen 1 of the glass type flash over internally. Saw several
glass type get the pinch tube end broken off,( which can be repaired) and
saw 1 that's 1 ceramic type literally explode through
the side wall of a Continental 50KW HF rig and embedded itself
into a cinder-block wall. Not a bad record for 40+ years.

Some one mentioned they had one that was broken, Take it to
a college or university glass shop the person there can probably
put the thing back to vacuum state and put a new pinch tube on it.

Well,

Seeing as how most of these units are at least 30
years old and some are much older.

And considering as how carefully the military handled
them and how much care and consideration the DRMS has
when surplussing them.

I'd have to say that they're virtually industructable,
and have a life exceeding that of most operators.

Just considering the practical aspect of it.

How 'bout that?

Joe

There are pictures available now for the T-368 on E-bay.

They even work!!!

Would like to see more though.

The unit looks ok, but better bring a mop and a bucket, its dirty!

Not to worry though, mine looked much worse! Mine was ooOOOooogly!

Its nice, now.

Paint,.....needs paint.

++++++++++++
The last time I went to the DRMS sale at Seneca Army Depot in Romulus, NY there were about 20, maybe more, sitting outside. The guy running the DRMS yard said they wouldn't be going up for auction at all!

No idea where they were going. The office had Bill Clinton's picture hanging upside down and NO respect for Al Gore at all. You see, Al Gore was trying to get rid of all of those people, he wanted ALL surplus sold through Levy-Latham, who just happened to be friends of his.

Remember these two birds were the ones who were cutting up ALL of the old rifles in the armories!

what a waste-- sounds like the guvmn't is doing to the T-3s what they did to
the R390s
at St.Julien's creek. Someone should start a rescue campaign.

I looked at the Levylatham website recently and note that they are now
listing/ searching by NSN numbers. Anybody got the NSN numbers for the T-3s
and associated equip?

From: Joe Munson
Topic: 799  Message: 799

Group,

I am now the proud owner of a T-368 manufactured by Crosley Radio, which used to be located here in Cincinnati. . Any hints or kinks I should know about before lighting if off for the first time? Any thing in particular I should look for in parts that have a problem developing over years of use and sitting around. Or there any that tend to have a high failure rate? I have a couple of operators manual's, but no tech manual. Appears to be pretty straight forward AM/CW xmiter. I have two audio amp decks....one appears to have many new caps, etc and the other appears to be orginal.

I also have the matching BC969 Ant Tuner, two R390A recievers, and Sideband Converter, ME 165 Power Meter, and some other related heavy metal from some kind setup.

So Far, have applied fil voltage, and tubes lite. I have not put the HV to it yet, thought I better check with this group. Friend of mine sent me the site...I had no idea it existed. Thanks in advance for any advice.

Joe,

WA4VAG.

http://home.att.net/~r391/www_ott/t368.htm

Here's the place to start, Joe!

The interlocks will be the most failure prone item
that needs to be checked first.

Mine ALL needed attention. Check for burned wires,
poor alignment, bent decks, squashed springs, burn
marks on the contact surfaces. These will be reliable
if taken care of.

Next is to clean, then clean, then clean some more.
All of the HV ceramics should be cleaned to remove any
oily stuff that will conduct.

Check all the spark gaps on the HV components, set
them according to the book. Check the HV wire on the
power supply deck for cracks or dried out insulation,
especially where it goes through the holes in the
deck. Big problem there, the older decks ran both
wires through one hole, the newer ones used separate
holes for each wire. Arc overs in these holes are
tough to find!

Clean the plate coil to remove anything that will
conduct, spiders, dust, etc.

Check all of the HV wire for bad or pinched
insulation.

Check the wiring harness where it runs behind the deck
bolts for pinched places.

Check the antenna relay for corroded connections, my
decks were ok, but I think my cabinet got into some
salt water somewhere as all of the antenna relay
connections were corroded like they'd been on New York
highways in the winter.

Oh, ... check the HV wiring and insulators to see that
they're clean and in good shape,..... did I mention
that yet?

Check the pick up shoe on the RF deck for a good
contact and alignment.

Check the BNC connectors on the speech amp for solid ground, check all of the audio line for good grounds on the stuff that is supposed to be grounded. This is where ultra-sonic modulation starts, not good.

Install a new three wire, 10 gauge power cord and make sure its grounded well inside the transmitter. I removed the plug on the back and put a 1 1/4" X 3/4" Plumbing reducer in the hole held in with a 1 1/4" electrical lock nut. Inside that I put a Kellem-type strain relief connector sized for the 10/3 cord.

This should be connected to a 30 Amp 120 volt circuit. Well grounded, of course.

And then if you get that far, check the HV insulators for cracks and to see that they are clean, also pay special attention to the insulation on the HV in the power supply deck.

Check the cabling in the RF deck to be sure its not in the FSK mode, you'll need the manual for that.

Check the fuse size in the power supply deck.

Put new bearings in the fan motors.

Check the condition of the Filament Voltage pot, this gets very hot, mine had a Chernobyl spot on it.

I had one relay that had one set of contacts welded shut, so you may want to check the function of all of them before you put power to it.

Not a bad idea to go through the manual and do the resistance checks at every tube socket and plug. This will give you a "baseline" for later troubleshooting, you'll know what it did when you got it, before the trouble showed up. This may also show problems if there are any.

Joe's rule: If you turn it on and it works the first time, ..... you didn't learn anything.

Hi Joe,

Excellent listing of check points...

I have a question about the fillament pot the runs hot...has anyone discussed ways to improve that situation, other than keep an eye on that compnent. Wonder if there is a better way to do it rather than the mostly brute force way...Mine does get hot too, and tends to heat the front panel after a couple of hours of on time...

73,

Gene

# 803. (no subject)

Yahoo group: T-368_BC-610
Date: 2001-03-16 14:39:13 UTC
From: Trevor Lewis
Topic: 803  Message: 803

I remember seeing a thouroughly mod-ed T-3 up for sale on the 'net where the person mentioned and showed pictures of how they'd replaced the filament pot with one of those very small 2.25 amp variacs that isn't that much larger than a big wirewound pot. I think they'd made a small bracket to do it, but it did not look complex. The variac would also give greater range of adjustment for situations (seemingly common these days) where line voltages run above the range these older units were designed for.

Unless there's a down side I'm not thinking of... I am thinking of doing this with my T-3 as the pot has some crunchy spots and I've got one of those small variacs in my junk box. Given the rest of the "spare no expense" engineering in the T-3, I can't figure out why B&W didn't do this in the first place; the pot approach seems trouble-prone and mickey mouse.

P.S. bravo to Joe for his thorough overview of rehab-- I oughtta do some of those things once I have an HF antenna up this summer to feed the T-3 into

# 804. Filament Pot vs. Variac

Yahoo group: T-368_BC-610
Date: 2001-03-17 00:53:04 UTC
From: Joe Foley
Topic: 804  Message: 804

Hello list,

I've seen references to changing the Filament Pot out in favor of a variable transformer but am not sure of the method. It seems that it needs a 3.0 Amp unit but I don't remember for sure,..... anyone know for sure?

Has anyone done this mod on their own unit?

Looking on the schematics I see where it is in the return line for several transformers, no wonder its hot!

Any one done the cup holder mod where the filament pot knob keeps the coffee warm?

Joe

# 805. Interlocks on the T-368

Yahoo group: T-368_BC-610
Date: 2001-03-17 01:20:08 UTC
From: Joe Foley
Topic: 805  Message: 805

I forgot one small thing about the Interlocks on the T-368.

If you use the electrician's de-oxidation compound in the interlock it will keep them working longer.

Lets face it. This is a bad design, it might be all right for a control/monitor voltage, but I don't like it for carrying any sizeable current. The springs just don't contact with enough pressure, looks like a problem to me.

One thing about carefully cleaning an unknown transmitter before initial power-up is that it will cause you to do a detailed visual inspection. You'll have looked at every component in the whole unit.

There are lots of places for the wiring harness to have been damaged, too. The hanging plugs could have been shut in the drawers, or the drawers pulled out too far and caused the conductors to break inside the harness.

Oh, yeah! When you unplug the RF deck,... don't drop the plug!!

It may reach the tubes on the modulator deck!

You may have to pick it up when pushing the deck back in so the deck will go in all the way, without pinching the wires.

Be careful pulling the MOD deck out as the coax to the speech amp may catch on the side of the cabinet.

Don't tip the RF deck down too far when pulling it out, it not only will scratch the paint off from the top of the Mod deck but it could catch on the cabinet and break the 4-400!

Don't let the RF deck twist, the Plate coil form may crack.

Be careful what you set the RF deck on,..... do we really need to say anything about breaking one of the vacuum caps?

This is gettin' scary!

Joe,

It appears that the guy that won it, put in 2 proxy bids on
about the last day and maybe one or two guys picked up on
it and bumped him up just for spite. I believe there were two
new bidders in the last minutes?

Anyone got a good solution for this issue (besides jumpering the disconnects)? My understanding was that the designers put the interlocks directly in the HV transformer primary-- with no relays-- to make it 100% fail safe that the HV will always shut off when the decks are pulled; adding a relay creates risk that the contacts will weld or some other scenario where the HV will remain live with a deck out.

How about using a large/ oversized mercury-relay type contactor & using the interlocks only to switch the coil of the contactor, then letting the contactor switch the transformer. Or a huge solid state triac relay?. Would either of these be a solution to the notoriously intermittent interlocks while remaining fail-safe enough to avoid adding too much risk that a "duh" moment could be fatal?

With regular maintenance they work well enough, I've left mine in the original state. Under military use they would definately be a pain. Mine came with big gobs of soldering wire stuffed in them.

Since the initial fix they have caused no problems and this is after several in/out cycles of the decks.

The ONE best thing to do with them is to put oxidation inhibitor in them, the stufff that electricians use on aluminum wire connections.

Alignment of the contacts is also important, if they've been "field modified" then that may have caused the mount to bend making the problem even worse.

My power supply deck was bent in so far the interlock could never have made contact. Almost ALL of them had so many strands of wire broken off that the insulation had started to char. Some had to be drilled out because somewhere along the line some tech probably installed one that didn't fit the wire properly and had to remove strands to get it to fit in the contact block.

Because of their poor past performance they should be checked closely.

Even though I don't like the design I have to say that they haven't been a problem yet. BUT I gave them a chance and did the work neccessary to make them work as they were designed to.

In a hurried maintenance setting where the tech HAS to get the transmitter back on the air as fast as possible he's going to stuff soldering wire in the hole instead of trying to straighten the deck, or look for something else wrong. We've got time to play, we can do it right.

STING!!

I had a real live auctioneer withdraw the item when MY
high bid wasn't high enough.

It was a military trailer with two 5Kw gensets on it.
My high bid was $400!!!!

Then they re-offered it, I refused to bid at all, one
of the shills in the audience "bought it". The guy
works for the auctioneer.

I made a big point of leaving, haven't been to one of
his auctions since then.

# 812. Re: [T-368_BC-610] Interlocks on the T-368

Yahoo group: T-368_BC-610
Date: 2001-03-18 23:11:49 UTC
From: James M. Walker
Topic: 805  Message: 812

I have watched this thread for a while and have a few comments. First one is I've heard enthusiastic
folks on 80 meters brag about "HOT SWITCHING" decks in T-368 transmitters. I would have to say
all the interlock were jumpered out if that were possible, The high voltage is daisy-chained through the
modulator deck to the RF deck, remove the modulator no HV for the RF deck. Remove the RF deck
no need to have power on as you are no longer putting out a signal anyway. Remove the power
supply deck, well you get the drift.

The T-368 is a formidable device for putting lots of RF in the air reliably with constant maintenance
being performed on all equipments involved. I have had experience a division level maintenance of these units. The first things checked for failures was the interlock system, because without it in place a "Commo" tech could find himself greeting St. Peter. Operators as a rule didn't open the cases on these
units, because they were not trained to do anything with what was inside. If a tube was suspected of
needing replacement, depot maintenance personnel would do it. At which time cables were checked
coax checked things were given a good looking at because it was better to find possible problems
before they showed up in the field.

Everyone complains about moving these things around, lifting decks etc; well consider this:

The T-368 was a mobile transmitter for all intents and purposes, it was part of a system usually carried
on a "Deuce and a Half" truck in a shelter with 2 R-390s a CV-116 fsk converter, an ls-206 dual speaker system 2 tt-98 teletype page printers with stands a tt-76 TD and reperf with stand as ancillary
equipment. The T-368 itself came with the md-239 fsk modulator and the TN-339 tuner and a ME-165
SWR/Wattmeter assembly. These trucks had four operators if the unit (Military) was up to TO&E
strength, 2 if not minimum Driver and "Shotgun". they did not and could not do anymore than change a fuse or pilot lamp.

I had the pleasure of seeing a T-368 get swapped out once in a "Hot Zone" The transmitter took
an "RPG" round in the center of the mod deck. The operators lived with only minor bumps and

bruises. The Depot team came in with a spare T-368 on the back of a 3/4 ton truck, three guys.
they completely removed the transmitter from the shelter, put the new one into the shelter and the station was back on the air in 30 minutes.

They accomplished this by removing the decks separately, then the cabinet, and reversing the procedure
to get the new one in. I might mention the tail-gate on a deuce and a half is about 4 & 1/2 feet off the
ground.

I've missed my point but thought I throw it out there for what its worth (0). The interlocks are there to
help keep you here, use them don't change them don't jumper around them, because the next guy that
get your rig is NOT going to get the paper work you kept on all the changes you did. I would not
want a T-368 that didn't have all the interlocks in place and working, from a safety standpoint. If you
have a T-3 and a significant other ask them how they feel about you playing with "LIGHTNING",
then ask them if they know the proper procedure for removing you from the death grip of a High
Voltage power supply.

Boy I do get long-winded, sorry.

73 and Live and so confound your enemies!
Jim WB2FCN

Trevor,

Sorry for late response to your comments on the filament voltage control...That is a great ideas, and the only checking I will do is to see what the max current rating requirement might be..I too might have one in the junk box....?? but, if not it will be a summer's fest quest item...and your are right about the curious low tech approach to fil current adjustment...?? Sure out of character for the T-3's...

I'm sorry to say neither of mine are on the air just now...am working to get 160 meter antenna up and build a tuner/find a tuner large enough to do the job with the T-3...I'm using 600 ohm feeders and so far haven't come up with a bal. tuner big enough to use with the T-3 that will be mostly on 160...Have the parts for a "Whopper" of tuner, but as usual am behind in building projects...but the antenna is up now and will be doing the hook up for lower power as I get the big tuner built...

again, thanks for the excellent suggestion ... darn, now I gotta go check the junk box...and start another project...and its summer an I should be outside digging a hole for the tower..and, and, and, ....

Grin es 73,

Gene

Ps...I copied Joe's notes...and they are part of my T-3 data...Neat Joe, excellent check list...

agn,

Gene

Bidding early is just an invitation to be outbid, IMHO. Granted, sometimes we can't be there for the end of things, but it's silly to bid early as(I think) it encourages others to 'test' your bid price if they have any interest at all. I also prefer bidding later if something gets absolutely ridiculous in price. I hate having my name involved in such things, as silly as that might sound. Also, I consider that the person auctioning it is most likely doing it there by choice, to get more $$, rather than selling outright for a fixed price. All the early bidding sure does help out the final high bid price.

Of course, bidding early/first/whatever is great if you can afford to place a bid so high that no one can top it. Which leaves me out...

From: Joe Foley
Topic: 818  Message: 818

Does anyone know what happened to the BC-610 that was
on E-bay?

The one with the REAL HIGH opening bid?

It says it was pulled off because of a mistake in the
description.

Joe

Part of the noise problem with that fan is that the
air coming in only hits one side of the wheel, if it
hits it in the center it makes it much quieter. This
can be done by installing a baffle in the hole that
directs the air to the center of the wheel. This is
called a turning vane by those people who make
ductwork.

Also, if you punch the hole in the back panel out to 4
1/2", which is the maximum, it will lower the pressure
there and make it quieter.

I'm not impressed with shutting this blower off as it
keeps the Filament Pot cool as well as other things in
the mod deck.

I also think the noise in this blower is dependant on
getting the thrust washers on the shaft in the right
place, gotta check mine, I know they're not right.

Anyone ever try throttling back the speed and thus noise of the stock blower with some kind of motor speed controller, or is the motor on the stock blower not OK for that?

Mine does put out a racket, but I haven't yet dug into the bearings on the main or RF deck blowers to see how much noise reduction I could get with new bearings.

Topic: 829  Message: 829

The next First Wednesday Net will be on April 4th.

There are no requirments that you use Collins equipment to check in.

Anyone with an AM rig can participate. Last time I was able to check in to all four net control stations. The net control operators are in each time zone in the United States with the eastern most station starting the net at 8:00 PM local time. Every hour the net control is switched to the next time zone offering an opportunity to follow the net acrossed the country.

This is a BIG event, when's the last time you heard a pile-up of AM stations????

It takes a powerful rig to cover the country, the T-368's and BC-610's are well suited to this challenge but few were heard last month. I think I was the ONLY one using a T-368!!

The rigs used are unbelievable, they sound great!

Gents,

I'm wrestling with the same questions re the fan....Plan is to...

1. put swithc on main blower and use it in warm weather for final cool down before powering down...will be leaving the second fan on of course...

2. Am working up a pair of Muffin fans to go over the exit grill on the back of back cover pane. and use them as exhaust fans...they should be quieter, but if not enough, I've found that by using either a Variac or a step down xfromer, Muffins will turn quite nicely at about 100 volts...and still move a lot of air without the high pitched whine....

Wow, my T-3 project has taken a long time and I'm still not there yet, but progess is steady and detemined to be ready for 160 meters next season...Darn, missed the best conditions this year...

73 to all,

Gene
W8KXR

Ps...also going to check the Junk box/fests this season for small variacs to handle the work of the pot for filiment control...? Not sure just what is needed yet, but going to take a look at that idea...

agn,

Gene

Gents,

Neat comments about the use of anti oxidant material on the interlocks...Here's a suggestion, question...in the case of battery terminals on cars and trucks...I've found the use of "Never Seize" is a magic material for preventing corrosion in that very tough environment...It is apparently very conductive...and I'm tempted to try it on the interlocks in the T-3...In the past I've had trouble with battery terminals...now, no maintenance at all, except to re seat the terminals each year to ensure every thing is tight during regular inspections...my friends who work on 18 wheelers have been using this for several years and essentially eliminated connector troubles...what a great thing for something that works in the worst environments...!!

Don't know for sure but I'm going to take a look at it for the interlocks...just don't smear it around...use good judgment and techniques as usual...

# 834. Re: [T-368_BC-610] re:T-368 Fil. Rheostat

Yahoo group: T-368_BC-610
Date: 2001-03-26 23:44:49 UTC
From: w7qho@aol.com
Topic: 834  Message: 834

All,

I note on the early models, at least, that all the filament transformers in the T368 have a 115 volt primary connection in addition to the 100 volt tap fed by the filament rheostat circuit. In most fixed environments I suspect the rig should work fine by merely shorting out the rheostat and rewiring the inputs on T1, T2, T3, T7 and T8 from pin 2 (100 V) to pin 3 (115 V).

These rigs were designed to operate under widely ranging conditions and the front panel filament and modulator bias controls were included to accommodate this. In my portable operations last summer, the voltage from the 5KW generator I was using sagged down to 110 on key down (120 v on standby) and the front panel rheostats provided for the necessary voltage and current adjustments. Shouldn't be needed, though, in a fixed environment with reasonable line regulation.

Topic: 834  Message: 835

Hi Dennis,

Your comments noted and filed, but now another question...Have been advised repeatedly, that for max life of the 4-400, the tube should be 'slow started' with the filament voltage backed down as far as possible --- slowly ---- prior to shut down...and in start up, the process is reversed to bring voltage up to rated value....

The question has come up as to whether or not it's advisable to install variac to drop voltage to zero for start up and shut down ...? Maybe we're all getting bent out of shape for nothing...

Expect the rheostat provides only marginal control to correct for voltages in mobile service as you suggest, but in the military, the supply of big glass was not a problem especially as us 'tax payers' were keepin' em supplied.

Wonder if you've had any cases of shortened tube life that might be attributed to fast start and no cool down?

73,

Gene

From: Jack Taylor
Topic: 836  Message: 836

Anyone on 160M with their '610? If so, what tuning unit are you using? (I haven't seen a TU that covers 160M) Any tips to pass along?

Also, the back panel covering the modulator/PS on my E model is missing. I'd like to fabricate a new one. Could someone describe theirs?

T-368 owners:

A while back, I'd asked for sources for a plug to fit the connector on the back of the T-368 that handles receiver muting, line audio in, etc.

Robert Downs in Texas (e-mail in the cc' line above) has a supply (he is also an excellent source of technical manuals and other connectors, and a good fellow to deal with): $12.50 + 4.60 shipping.

No it's not mine. This guy found my web page and sent me this message.
Please reply directly to him.

Joel N3EYR

I have a hallicrafters BC-610E and all the original paperwork
from its sale in 1946 from Henry Radio of Butler Missouri. This radio is not
in working order but I believe it is nearly, if not all complete. I would
like to sell it to someone interested in it I'll never do anything with it
and I'd like someone to get some good out of it. If you know of anyone
interested or could point me to a place to list it. I would be greatful.

Hello All,

Anyone read that ER article about using
smaller fuses in your 610 ? I did and mine blows the
HV fuse every time. Maybe the guy who wrote the article
had a little "R" in the line cord. Anyone else try this
stunt ?

I haven't read the ER article but have used 15, 20, and 25 Amp Edison base plug fuses of the regular and delayed types in the BC-610-G here with good results. I've run out of 15s due to a blackened 75 meter final tank coil that kept shorting out the HV. The HV fuse has only blown once though. Usually the same main fuse blows instead. The old coil finally had to come out and now there are 20 and 25 amp fuses in the rig. 15 Amp fast blow types are especially good for testing out a repair job in the HV circuits or final amp as they will blow a lot quicker if there is a real short somewhere. 73, N4QNX DEWitt

I haven't even got my BC-610-E on the air yet. But I did have a similar occurrence with a Valiant I I purchased. The guy I bought it from demonstrated it to me on the air while it was coupled to a monitor scope. It worked fine.

When I hooked it up at home I got a big POP and found that one of the fuses in the Johnson AC plug had blown. Upon examination I found that he was using 5 amp fuses. The manual calls for 8 amp fuses. I can only guess that his line voltage was less than mine. Perhaps he was on 110 VAC, while mine seldom dips below 120 VAC (except in the summer, when the demand is high due to AC use.)

Hope this helps.

Hello All,
On my BC-610(E) and (I) models I use Superior 25 Amp. Variacs @
0-130 VAC. I set the line voltage to 110 going to the BC-610 and keep an eye
on it during operation. Don't pop any fuses except the
low voltage 6 amp one when the 5Z3 Bias rectifiers get arcing inside
or shorted.

Roy,

Are you getting discrete frequency changes (jumps), or is the frequency following the modulation (i.e., FMing)? I've been running a pair of these transmitters for six years now and haven't run into either problem, even during portable operation where the line voltage dropped from 120 to 110 on key down. You might try replacing the oscillator and VR tubes and see if this helps. Would also be instructive to monitor the B+ and heater voltages to the oscillator to see if anything is changing between key up and key down and during modulation. Later versions of the rig used a constant voltage xformer for the osc. heaters. I have one of each and haven't noticed any differences in stability, though.

Good luck,
Dennis D. W7QHO

Topic: 845  Message: 845

The above mentioned net wasn't as enjoyable last night as it has been in the past, very noisey!

Still there were 29 check-ins for the Eastern portion, net controlled by Paul WA3VJB.

The signals were great! Paul's rig sounds awesome!

My one and lonely T-368 was joined by WA1HLR's, that's the Tim Tron, BC-610B. He says the "B" stands for bastardized, knowing him he's probably got it extensively modified, it sounded great.

Tim is also the one who does the mods to the T-368 that will make you sound just like the six o'clock news!

All,

Noisy on this side too. I was able to check in twice with my T368 (Basic model), first with Jim, W0NKL in Prescott, KS and finally with Bill, N6PY out here. Didn't hear any other T3s, though, and no signals coming through from anywhere east of KS.

In WWII Navy Comm. publications ( Copy from Robert Downs) there is a section with Signal Corps gear used by the Navy..well ..-610 is in there, SCR-508, Navy ART-13 etc.

Gents,

Regarding the dual fuse type plugs on the Valients and also many Heathkits and even the old Gonsets, I'm personally changing them out for the two prong plus ground variety as I bring these old vetrans back to active service here at W8KXR. Unless you provide specifically for a hard wired chassis ground, there is a certain sense of false security in the fused plugs...better than no fuses, but the 'for certain' grounded chassis is a must when we play with our potentially lethal toys...

73,

Gene

Heavy Iron Ops,

I too am just completing a panel mounted slow start Variac system for my Viking 500, using volt and amp meters for keeping the nominal line voltage to the transmitter at near 115 to 110 volts...haven't faced a blown fuse scenario yet, but will now review the fusing in this rig based on the discussions here...

Excellent food for thought, regardless of the equipment...and oh yes...My soon to be on line T-368 will run from a 60 amp variac to keep the volts in line...looking for a 30 amp ameter to add to the system...just so I can see what's going on when we get to full power... 8>)

73 from Northeast Ohio,

Gene

W8KXR

# 856. Big QSO on 40 tonight

Yahoo group: T-368_BC-610
Date: 2001-04-16 01:14:54 UTC
From: Joe Foley
Topic: 856  Message: 856

They're talking about T-368 relays, one says, "You cant cut them open with a hacksaw!"

AHHH! The cans can be unsoldered with a big iron, too, much less messy.

This is a big QSO for so late in the evening.

Joe

Hello Joe Et al,
Yes, quite a large turnout. I counted over 20 different stations. Folks were leaving and coming back to find the freq. still occupied and rejoining the fray. A great time was had by all. Should have been there.

E-mail Bryan, not me!!

bc-610
I have a Hallicrafters BC-610 E transmitter,BC-614 E speech amp that I would like to sell.It isn't in working order but I think it is mostly complete.I'm located in Illinois and currently asking $800.00 for all. I have the original paperwork and schematic from it's 1946 sale by Henry Radio of Missouri cost was $613.95 dollars.The paperwork includes signed letters from Bob Henry .If anyone is interested e-mail me for details. rollins@...

HEADS UP!!

COMING SOON!!

I asked KB8VVT if he'd consider selling his transmitters on this list INSTEAD of on E-bay and he said he would!!

So here's your chance, they're located in Pennsylvania. He's working on descriptions now and will let me know when its ready.

Joe

# 883. Binghampton Hamfest!!

Yahoo group: T-368_BC-610
Date: 2001-05-08 01:19:41 UTC
From: Joe Foley
Topic: 883  Message: 883

Yeah!

I finally got to go to a hamfest!

This one is a small one but that's good.

Very friendly group, good selection of stuff, bought TUBES! 4-125's. One good, one weak, one dud. Oh, well.

Two 3B28's for $2 each, test good on the TV-10, message on the side of the box said "suspected of arcing" in 1970, probably not good.

Kicking myself for not letting the SP-600 in the truck, it wanted $50 and needed lots of work. Oh, well.

Met N2BC, Bill, had a good long conversation with him and others that I hadn't met before. An ME-165 dummy load/wattmeter leaped out of my truck and into his waiting arms. Word has it that its in a new home where its appreciated, ... and already put to work!

Great weather, nice location, definately one to plan for next year. The turnout was low because of the threat of rain in the morning, but I got there at 11:00 and it couldn't have been a better day.

For the new guys:

Posts to the list go to this URL:

T-368_BC-610@yahoogroups.com

Posts to me ONLY, the owner of the list, go to this
URL:

T-368_BC-610owner@...

So, I suspect that the following was meant for the
list.

Anyone have any suggestions for a T-368/BC-610 net?

What night and freq should we have it on?

Should it be a monthly thing, maybe ever third
Wednesday night on 3.885 MHz. That would mean there
would be TWO AM nets per month on 80 mtrs. The CCA
First Wednesday Net, then two weeks later would be the
T-368/BC-610 net.

Joe

<< Anyone have any suggestions for a T-368/BC-610 net?

What night and FREQ should we have it on?

Hi, Joe,

I'd like to see the net on the Wednesday night you suggest, however, I would prefer it to be an open net EVERY Wednesday night, so that guys who couldn't make it on one night might be able to make it on another. It would be nice to be able to contact other owners and aficionados ANY Wednesday night of the month. That way I wouldn't need to wait a whole month to talk to someone if I should miss the one day of the month it is scheduled for.

73, Ron K -- W1ARS PS What happened to RedMenace??????

<< Should it be a monthly thing, maybe ever third
Wednesday night on 3.885 MHz. That would mean there
would be TWO AM nets per month on 80 mtrs. The CCA
First Wednesday Net, then two weeks later would be the
T-368/BC-610 net.

I think Wednesday would be great. I don't know that every Wednesday night would work. We could try if the frequency is open. If someone wants to come up with a date. Maybe 5-23 would be nice. around 8-8:30 pm central time. I am in South Bend Indiana. If this works post your resopnce and your location so maybe we can get a ideal of the locations of all and how many ar going to be involved.

(From the "Barn"):

What to do with a 5 volt 36 amp Sorensen power supply?

Hmm,..... a little ductwork, a muffin fan, a volt meter, and some sockets for 4-125's/4-400's and I've got a nice way to warm them up for a long period of time, days. They need that if they've been dormant for years.

With a 36 amp output I can do 5 - 4-125's @ 6.5 amps each, or 2 - 4-400's @ 14 amps each.

Any good ideas? Hey,..... there's a nice DC ammeter, too.....

Its really busy on 3.885 MHz tonight, there are four
QSO's going on and I don't want to bother either one
of them,..... some are quite interesting. We'll
try it some other time.

Any suggestions?

# 900. net night..

Yahoo group: T-368_BC-610
Date: 2001-05-24 04:34:32 UTC
From: aa9wqham@aol.com
Topic: 900  Message: 900

I was on from about 7 till 11 tonite. I just cleared with k8atv a fellow t-368 owner on 3.885. I can only hope my t-3 sounds as good as his. I listened off and on 3.885 didn't here anyone there so i joined a conversation on 3.880 and monitored 3.885. I had a blast tonite and wish I could have caught up with some of you. Lets keep trying. Any other night besides wednesday would be fine with be. buy the way... the t-3 ran great tonite. It hasn't been used this much since it was in military service. No problems at all. I hope to get on the air at least a few nights a week. Look for me around 3.885 and 3.880.

Hello,

My name is Greg WA1JXR

Just picked up a BC-610-H and a BC-614-H.

Plan to start restoring it soon and getting it on the air.

One thing I need is it is missing the PLATE ma meter.

Any one have any suggestions where to get a replacement?

Look forward to learning from people in the group and hopefully getting on the 368/610 night on 3885.

73's Greg.

From: aa9wqham@aol.com
Topic: 904  Message: 904

What a fun night. a few of us actualy got to meet on the air. I really enjoyed it. But the T-3 didn't. The Last few nights I have had a problem with tripping the overload curuit and I found out why this morning. I found 2 burnt insulators, one on the power supply deck and one one the rf deck. I suspect that someone in the past swapped them around when they had a problem, instead of replacing them. I think I have found a few to replace them. It will take a few days to get them so I am down for the moment. But I should be back by the end of the week. talk to you all soon.. 73's for now....

Is this a good time to suggest a yearly cleaning of
the HV insulators?

One might want to look for small cracks in the HV
wiring on the Power Supply Deck, too. I'm not
impressed with the insulation on that wiring, mine
gave up with no sign of arcing or burns, tough to
find. Again, I suggest that the cleaning is a good
time to check for other problems, too.

Gives one an oportunity to do a close visual check.

Had a good QSO with Larry (AA9WQ), Russ (WB3FAU), and
Bill (W8VYZ). Russ wasn't at his T-3 and so was
difficult to hear. Conditions were: heavy lightning
crashes but we perservered. After 1:00 AM things got
quiet but there was no one left to answer my CQ!

# 908. Hardware Supplier

Yahoo group: T-368_BC-610
Date: 2001-05-31 17:18:24 UTC
From: Hagan, Reid J
Topic: 908  Message: 908

In my search to find specific hardware for various radio projects, I discovered the "Nutty Company Online Fastener Store", which offers a very wide variety of hardware and related goodies that is well worth a look. I found prices to be quite reasonable also. I had been looking for 6-32 X 1/4" slotted pan head screws, as used on Drake cabinets, which weren't readily available at normal hardware stores in New Jersey (only "round head") . "Nutty" had them in stock at $1.46 per 100.

Reid, W2HU

They can be viewed at:

> The first thing I would do is ditch the carbon mic.
++++++++
Thanks for the reply, Bill.

I'm working on a replacement for the Carbon mic, KD2XA says an old Motorola mike will make an exact impedance match for the Carbon unit. Will try that.

>
> That said... unless one of the tubes is a total dud,
> I would doubt they are
> so different as to cause serious distortion.
++++++++
Ah, but my testing (tube swaping) shows that they do cause distortion. Hence the need for more testing. A matched pair of weak tubes will show no distortion but low mod current. Better tubes show mod current within spec but severe distortion! The scope also shows some difference in the waveform peaks, smaller excursion into the negative region than into the positive.

Thus my considerations regarding individual tube bias balancing.

When
> you have the resting
> current of the pair adjusted to spec, is one showing
> lots more color than
> the other?
++++++
Haven't torn the T-3 apart to the point where I can do that, have to pull it away from the wall and remove the ductwork and backpanel, not easy in my small shack.

>
> Another point - you don't want to measure grid

> for DC, then add a companion bias adj network.
>
> #2 is a bit more problematic. The two tubes share a
> filament transformer so
> there's no way to isolate for measuring independent
> cathode current.
++++++++++
Interesting you should mention that, not exactly
cathode current, but when I use my 5 volt DC power
supply to allow the tubes to warm up on the bench I
get different current readings on the filament
circuit. Anywhere between 6 and 7.5+ amps on
different tubes.

Any considerations on the current flow through the
filament in regards to the condition (power output) of
the tube?

Also, the specs of the 4-125 don't mention AC or DC
for filament voltage, the T-368 supplies 5 volts AC to
those filaments. Is my DC power supply causing any
harm when used with no load on the tube?

Since
> we're just aiming for a DC balance, measuring the
> plate current right at the

> any other way to do it.
> You would have to haywire in a milliammeter in each
> plate circuit, then
> adjust the bias on each tube so it's 1/2 of the
> desired resting current.
+++++++++
ORRrrrrr, I could put them in place of the 4-400, read
the PA meter, read the output watts, and try to match
two together.

>
> OK, enuf typing. I still think you should get a
> 'real' microphone!
+++++++
Oh, of course, working on that.

>
> I didn't make Rochester - too many projects, too
> much rain. Hope you had

> fun up there!
+++++++
Yes, it was good, saw people from this list and from
the R-390 list. The rain was a non-issue, two hours
on Friday, none on Saturday. Only the weenies went
home, us diehards stuck it out and had fun because of
it!!

Gene and I made several passes through the flea market
on Friday afternoon and scored many tubes, every pass
through revealed another new pile to search through,
no crowds either.

Saturday I had to wait for the Tim Tron to move out of
the way so I could see a certain interesting pile of
tubes, he was working an in-person pile up on both
sides of him, I didn't want to break in.

hehehe,

Joe

++++++++++
Argh, that should have been obvious!

>
> The '368 driver is one center-tapped winding, with
> common bias for both
> tubes entering the center-tap.
++++++++
Ah, and that's why this can be a problem, they
expected both tubes to be equal. Now, you say this
shouldn't be a distortion problem unless one tube is
really bad, I won't argue that, but I'm chasing
distortion problems with the tubes I change in and out
of the mod deck. The weak matched tubes don't show
distortion, so, unless there is distortion as a
consequence of having full modulation, I can attribute
the distortion to bad, or un-bias matched tubes.

Have I missed anything there?

This is why I haven't done any audio mods to this
unit, I want to get full modulation first, and get it
running to spec before I modify it from stock.

++++++++
Ok, is it possible to leave one side of the driver
secondary unmodified and make the other side
adjustable to match whatever tube is hooked to the
unmodified side?

>
> There should not be any problem with RF at the

+++++++
Right, that should have been obvious, too.

++++++++
Yes, that was checked and modified on initial start
up. It has a fairly solid plexiglas window on the
front now. It was verified that it has the right
bolts in it, too.

The help is much appreciated,

73

Joe

Hello,

Lack of time and money (heard that before :-) ) forces sale
of the following items....all are pick up only near Houston,
TX. Can arrange to meet or deliver within a 300 mile radius.

T-368. This is a project that isn't going to get finished.
Needs only the T1 filament transformer for the RF deck and
the vac variable couplings. I have everything else. The vac
variables and plate tank coil need to be installed. In nice
cosmetic condition. Has some mods that might have been made
in the military as knobs match the originals. Will include
almost complete spare power supply deck, spare tubes, ME-165
wattmeter, and matching RTTY keying unit. $1000.

T-195. Great cosmetic condition. Works well but has low
output. Autotune seems to work well....both freq and band
autotune as well as the plate tuning autotune. With power
cable and original manuals/schematics. $275. If you buy
the R-392 below, I'll throw in the dogbone cable to interconnect.
Spare 4x150D's included including 1 NOS.
R-392. Works well but has reduced sensitivity on low bands.
Comes with original manuals, some spare tubes and parts, and
better front panel. Cabinet needs to be repainted. $225.
Will sell combo of T-195 and R-392 for $450.

please e-mail with questions, thanks, 73,
Phil

Hello,

I am desparately in need of the RF deck filament transformer
for a T-368 transmitter. It is T1 and provides the 5.0 volt filament
power for the 4-400, 26 volts for the 6000 tube, and 6.3 volts
for the rest of the rf deck tubes. I also need the two couplings
that link the gear mechanism to the vacuum variable caps. If
anyone can help with any of these items, please e-mail me.

thanks & 73,
Phil

# 935. T-368 modification problem

Yahoo group: T-368_BC-610
Date: 2001-07-24 22:26:12 UTC
From: redmenaced@yahoo.com
Topic: 935  Message: 935

Hi List,

This was posted by one of us on the AM Window BBS page.

I was wondering if anyone here had any ideas to help him.

This is evidently an attempt to remove the excess capacitance from the RF deck tank circuit to allow the higher frequencies of the human voice to be transmitted, too.

Thanks,

Joe

I recently performed the PA stage mod on my T368E per the standard as outlined in the mod section of the AM Window. It opened the high end up just as expected however I have noticed heating of the newly installed B&W 800 plate choke.

Here are the symptoms:
Gets slightly warm on 40, fairly warm on 75 and downright how on 160. The heating seems to be more in the center to upper part of the choke. No other operational quirks observed and I wouldn't have even noticed it if I hadn't been checking to see if the 800 had sufficient impedence on 160. Still not sure of the freq range of the 800 choke.

Here is what I have done:
Tried several other chokes...one which was in a kw linear that does 160.
Subbed out the plate bypass cap
Subbed out the plate blocking cap.
Subbed out the 4-400
Checked the screen bypass cap and all hardware and grounding.
Added the 2 10 ohm resistors in series with the grid as in the "A" model T368 (parasitic suppression)
...Some of what I have done seems to move the hotter area of the choke around a bit which suggests a parasitic but nothing has really made any significant change.

Anyone else done the mod or had any experience with a similar problem? I have talked to several guys on the air about this and have tried all that has been suggested plus a few more of my own.

This was taken from the AM Window BBS webpage as W3NP, Dave, goes through his transmitter with this popular audio enhancing modification. The goal is to remove the excess capacitance from the RF deck which attenuates the higher frequencies in the audio.

If you've ever heard Dave's transmitter on the air you may ask why he'd want to do this as his audio presently is very good. But Dave's attention to detail in improving his audio is what has tracked down this common problem with this particular modification.

Note that when checking the temperature of the choke coil in question extreme caution must be excercised due to the High Voltages in the area.

I wil try to give credit to all those who replied.

In Reply to: HOT Choke - Parasitic?? posted by Dave/W3NP on July 21, 19101 at 18:36:55:

Got me thinking-

: Here are the symptoms:
: Gets slightly warm on 40, fairly warm on 75 and downright how on 160.
: The heating seems to be more in the center to upper part of the choke.

This wouldn't seem the symptom of a VHF parasitic-
HOWEVER, it is possible you're experiencing a LF parasitic, where the new plate choke may cause an oscillation, much like the old TNT transmitters of days gone by. In this case, the "tank coil" is the new plate choke, so the oscillation will be down in the BC band or lower. Possible cures are to change the value of either the shunt-fed plate (or grid) chokes. Since you've already tried different plate chokes, you might try putting a say, 22K-47K, 2 watt carbon resistor in parallel across the grid choke to dampen LF oscillations.

A spectrum analyzer would tell you if you're getting a LF oscillation...There is another way to check for parasitics but this is VERY DANGEROUS if you're not careful... Tape a small neon bulb to a long insulating rod like a two foot DRY, DRY, DRY wooden dowel or fiberglass rod. For safety insurance, wrap the grip area of this rod with foil and securely ground it. Key the transmitter and hold the neon bulb until it ignites near various components like the tank coil and the plate choke. A VHF parasitic will cause the bulb to glow purple- Low frequency energy will cause a more normal orange glow. You can easily see the difference.

Good ways to dampen VHF parasitics include: Using nichrome or iron wire for the inductance of the plate parasitic suppressor...Also string a ferrite bead or two on the lead to the grid pin on the tube socket....Raising bias voltage...

I've never been in a T-368, so I don't know how it's bypassed, if the screen of the 4-400 is not adequately RF bypassed, it'll also lead to

parasitics and just plain-old TPTG spurs. Might be something else to look at.

That's my shots in the dark... Good luck.

Bill

Hey Bill

Thanks for the thoughts. Tried the neon bulb test and most of the bulb glows orange with a trace of blue near the base end of the bulb. Probably not a parasitic but just insufficient inductance/impedence with the B&W 800. See my followup down the page a bit. Now I need at least a 200uh solenoid choke good for 1 amp or so with no series resonance on 160/80/40. Still surprised that a commercially made choke for 3.5 and up would not have enought induct. for 75. Thanks for the ideas.

...Possible cures are to change the value of either the shunt-fed plate (or grid) chokes.

It is best to eliminate the grid rf choke altogether. Using a plate choke AND a grid choke is an open invitation for your final to become a low frequency (BC band or below) TGTP self excited oscillator. I use series feed in my grid circuit, and the only "choke" is the grid-leak resistor itself, which is a wirewound power resistor. I ground the rotor plates of the grid tuning condenser directly. Just make sure you have enough plate spacing, since the condenser carries full

RF grid voltage plus the class-C bias voltage.

Sorry to trash the modification but I don't think there is enough inductance in a B&W 800. I suggest you try the B&W801 which has 200 micro henerys. The 800 only has 90. I have used this choke for 25 years and know there is a resonance
around 25 MHz. A VHF oscillation will make them
go off like a M80. My friend who has my old 4-1000A rig asked me to modify it to cover 160M and we had to replace the choke for it to work properly. That rig runs at the same plate voltage as the T368 but more current. A quick test just add another B&W800 in series with the one you have. You solved the problem if the temperature goes down. If it stays hot look at the plate Suppressor. You might have to squeeze the turns a little closer. You may also have to add a suppressor in the grid to tame it. The T368 design connected the DC to the output of the pi network to avoid these problems and learned to love all the other problems that it created.
Maybe you need to put a parallel bypass cap at the DC end of the choke say 50 to 100 PF to make sure the bypass is broad band enough. This shouldn't hurt the audio response. WA1GFZ

: There isn't any choke in the grid circuit. I just added 2 10 ohm resistors in parallel as an experiment...some T3's were built that

way.

July 25, 19101 at 17:48:17:

I have already tried series connected chokes and they (some) do
change the amount of heating. Last night I series connected the
already mounted 800 with a js connected L7 linear amp choke with the
bypass at only the cold end of the L7 choke (B+) and it runs fairly
cool on 75 and cold on 40 but still fairly warm on 160 but would be
usable - Both chokes heat about the same. With only the 800 in the
circuit a neon bulb showed rf all the way to the bottom of the choke
and with the 2 in series the bulb will not fire on the bottom half of
the L7 choke.I had already suspected that the 800 had insufficient
inductance on 160 but was surprised that it ran so hot on 75. The
impedence of the circuit in the T3 must be quite high at this point.
Since I don't want 2 chokes hanging in there I either need to find a
different choke B7W 801 - anybody have one??, or wind one up if I can
find a suitable form.

: or wind one up if I can find a suitable form.

Dave,

I have wound all my plate chokes in the various rigs, big and small.

I use a standard 12" long, 1" diameter piece of PVC pipe and wind
regular #20-#18 insulated wire on it...maybe 120 turns or so. Good
down to 160M.

I usually wind it in small grouped turns bunches near the top half leaving 1/2" gaps and gradually make the groups larger as it gets nearer the bottom.

Drill a hole in the top and 2" from the bottom for the wire ends.. Start with a turns group of like 5 turns followed by 10 turns, followed by 20 turns, etc - works for me.

Use a colored electrical tape to wind over the whole thing after finished to make a nice looking product.

Then use three "L' brackets bolted to the bottom as a mount.

If it has any series resonaces you will find out about it real soon...assuming you don't test it first.

Over 30 years and maybe 20-30 chokes, I can only remember losing one or two chokes made this way.

Tom, JJ

(That'd be K1JJ)

Posted by Dave/W3NP on July 27, 19101 at 11:56:25:

After reading Tom K1JJ's post about his choke rolling I have decided to use PVC pipe for the form, already bought a foot of the stuff and already have the necessary hdw to mount it. I just yesterday obtained a roll of #22 and a roll of #24 varnished wire from a local motor rewinding place - (use what I need and bring the rolls back - no charge -nice guy!) Anyway Tom uses insulated wire of a large gauge but I suppose this will still work. My big question is that I was always of the opinion that PVC and RF didn't mix very well - things like melting bursting into flame,etc. Anybody else tried this using just varnished wire on PVC? I had already looked at the PVC pipe but discarded the idea until I got Tom's thoughts. I won't be able to make mine 12" long because of the vertical height restriction in the T3 but should be able to make it long enought to get 200uh or so. Anyway..what say about using PVC sewer pipe for my plate choke? Read the post a bit down the page called "Hot Choke..etc" for the whole story. For anyone contemplating the mod...the B&W 800 is not large enough but I have had one OM (OTT) say the National R175A works fb for him on 160.

In Reply to: HV Plate Choke out of PVC?? RE: Hot Choke posted by Dave/W3NP on July 27, 19101 at 11:56:25:

You can load a plate choke that needs to be short for space reasons with a ferrite rod (or glued-together stack of large ferrite beads) jammed down the center of its hollow form and held in place with RTV. That'll let you use larger wire for current-handling reasons and still get the inductance you need. If possible, measure the choke's inductance without and with the ferrite loading to see if you're in the ballpark. As a bonus, you'll tend to decrease the Q of the thing to minimize resonance effects.

That reminds me of a time I wanted to get down on 160M with the 4X1 rig, but needed more inductance in the RF choke.

I heard of doing the same thing -

I stuck a 1/2"dia, 6" long ferrite rod inside the PVC form RF choke and fired it up.

After a few minutes of 800W carrier (back in the old days) the rod got so hot it snapped into pieces and fell against the PVC... melting the form and starting it on fire... cheezz.. What a mess!

Must have had some strange resonance effect. In the future I always did it the hard way and wound on some more turns.. :)

I'll bet if I used a rod with a lot less permability it would have worked as Bill suggested..

Hmmmm...Bad Luck, Kemosabe.

We used ferrite-loaded RF inductors all over the inside of the AM-3924 linear amplifier (pair of 4CX1500Bs) for the very reason of saving space...even in the ridiculously small tank coils.

Maybe too many amp-turns around your ferrite stick, or using material with too much permiability...too much flux in that pup...Out of the blue, I prolly wouldn't use the 2000 u stuff if all that was needed was to double the inductance...Something with a u=100 intuitively seems better. Sounds like a job for Captain Empirical and his Experimental Rangers!

(KD0HG again)

++++++++++++++++++++++++

I have a choke wound on a 1" dia x 6" long
ceramic pillar that works ok fine 160-10m.
It has a suck-out point at 18mc but I don't
operate there. Looks to be abt #28 wire close
wound and the rig runs 2200v @ .25ma plate.

One thing about plate chokes...
When a choke has a higher Q you don't need as
much inductance , such as with a single layer
unit. A pie wound unit generaly has a lower Q
and as a result requires more henryage.Just be
careful with high Q chokes because they have a
greater tendancy to cause an ocillation when
used with a grid choke as Don has stated.

Well anyway, someone clued me in one this and
it seems to hold true.

Gary

In Reply to: HV Plate Choke out of PVC?? RE: Hot Choke posted by
Dave/W3NP on July 27, 19101 at 11:56:25:

Oh, one more thing, Dave.

Of course #22 wire will handle 1 Amp and more...

The reason I use large gauge wire... #18-20 is because if there is a
short circuit in the rig, or any kind of flashover due to parasitics,
poor neutralization, etc, etc... the choke will handle this abuse.

When using tiny wire they will sometimes implode, ripping themselves
apart when the problems are really external.

Just a way of making the choke heavy duty, that's all.

Plus it's easier to construct.

BTW, if you have problems mounting it vertically, how about
horizontally? Just keep it away from OR at right angles to the tank
coils to reduce stray coupling.

In Reply to: HV Plate Choke out of PVC?? RE: Hot Choke posted by
Dave/W3NP on July 27, 19101 at 11:56:25:

Hi Dave,

Some additional info...

Teflon would be the ultimate material to use and is cheap enough, but check out this experiment:

I just tried a piece of the white PVC in the microwave oven at 1 ghz? at about 1000 watts for 2 minutes and it showed no signs of absorbing heat.

I suppose that is an extreme test and may also be applicable to 10-160M.

I've also used PVC tubing for end antenna insulators and open wire spacers for years on 20M running high power. If they absorbed much RF surely they would have ignited there.

The only problem outside is when they or any nylon/ plastic insulator get heavily covered with acid rain/pollution crap...then they flame out as you would expect.

Other opinions welcomed...

Tom, JJ

BTW, try using a piece of string as the spacer between turns with that varnished wire. Just wind them on together.

The plastic insulated wire I used gives it's own spacing. This is more for less inter-turn capacitance effects more than voltage breakdown.

When I wound the choke for my 3CX3000A7 amp, I used #21 enameled on 1" Delrin rod which was obtained from a local dealer of industrial plastics. It's more expensive, but more rugged & easier to work with than hollow PVC pipe. It also has better dielectric properties, but this is probably unimportant at HF. (If Tom has used PVC successfully in this application, so can others.)

In Reply to: Re: Re: Re: Re: HV Plate Choke out of PVC?? RE: Hot Choke posted by Larry/NE1S on July 27, 19101 at 16:41:22:

The reason for using covered wire is to force a little space between the turns which reduces C between turns. PVC might not be the best material but teflon makes nasty gas when it burns, yep it can SK you. Sometimes a choke melts down due to random failures so I would avoid capton or teflon insulation. Enamal wire with s spacer like mono filament line would also be good. A long close wound inductor should be avoided. I once saw an application where a choke was wound with resistance wire to lower the Q of the resonance points. Another thing would wind a couple chokes and put them in series at different angles from each other. I think Tim selected different chokes in his old 4-1000A rig when he changed to the upper bands. It isn't easy to build a broad band RF choke to cover the whole range. The T368 had to cover the whole range which is why they did the choke at the cold end of the pi network.

: wa1gfz

A "plate" choke at the cold end must work very well since the parallel high impedance of the tube is avoided, and a much smaller coil can "hold-off" the 50 ohm RF at the output. I suspect that the DC blocking capacitor at the antenna output is mucho huge to carry the 5+ amps of average RF current at 1KW? What type of cap is used in the T368 for this purpose? Any spurious resonances would be very

high, and probably out of band. I may do that to get my 4X1 down on 160, but not in the near future.

Can anyone on the reflector tell me if the following modulation transformer is from a T-368?

Chicago Transformer Corp
B&W 13002
TF1C14YY Special

20,300 ohm primary & 9100 ohm secondary
250 watt, 5000 vdc ins
300-3500 cps + or - 1 db.

Thanks for any help

73,

Bob, W4WSZ

Can't vouch for the part numbers listed, but the impedance ratios and power
level is right on for the T-368 Basic and A models. Sealed box with big
white insulators sticking out of the bottom??

This was stolen from the AM Window BBS page!

Posted by Larry WA9VRH on July 30, 19101 at 17:49:36:

Hi everyone here is the plan for August's First Wednesday CCA AM
night on
3880 kcs.

NOTE: We are going back to our one hour per timezone during the Summer
months!

REMEMBER you DO NOT have to be running Collins gear to checkin.
Everything is welcome and Everyone is welcome!

We will have 4 main ncs. One on the East coast, Midwest, Mountain
area,
and West coast. The main ncs will have others in their area helping
with
their hour. (Please note ONE HOUR). At the end of their hour the main
ncs
for that region will contact the next regions ncs and turn ncs over
to them
etc. etc. etc.

Each ncs will start at 08:00pm in their time zone.

Starting at 8:00pm EDT (0000 UTC) East coast ncs will start the net
At 01:00 UTC East coast ncs will turn ncs to Midwest ncs
At 02:00 UTC Midwest ncs will turn ncs to Mountain ncs
At 03:00 UTC Mountain ncs will turn ncs to West coast ncs

comments please to wa9vrh@...

Have fun and enjoy the great sounding AM signals. 73's Larry WA9VRH

Hey Bob,
That might be correct, however the several I have all have a primary of
30,500 ohms & secondary
9100 ohms. The model number is TF41YY 3456 about 4X5 and 9 to 10 inches tall
terminals 3X2
ceramic with holes in studs for bolting wires to it. Usually black, the one
you have might be same
or a BC-610 H,I,T-218 tranny. Same specs though, what you doing with it?
Tubes etc?

# 946. Rochester Hamfest?

Yahoo group: T-368_BC-610
Date: 2001-08-01 03:20:23 UTC
From: redmenaced@yahoo.com
Topic: 946  Message: 946

Ok,

So I guess no one's going to do a report on the hamfest that was several months ago.

I was there! I actually made it this year!

One thing I intended to do while there was to meet Gene Beckwith W8KXR, one of the members of this list, who I had been trying to get together with for three years! Now, understand, I had never seen him before, never met him, and didn't know what he looks like except for an image on the AM Window webpage where he's in a line of guys who setup a T-368 for mobile use at one of the past Rochester Hamfests with KG2IC.

Yes, it did rain at Rochester this year but the diehards paid it NO mind. While working through the remaining flea market Friday afternoon I happened on a fellow with a 'Nam style hat and a white beard just like the guy in the picture I had seen, so I took a wild shot,..... "Is your name Gene?" I asked. He looked up at me, he's about 5' 10, I'm 6'3", caught him by complete, awkward surprise. While he tried to remember if he knew me I let him off the hook by explaining where we'd made contact before. "How did you know it was me?", he asked in disbelief that anything could have given him away.

It was a clever disguise, but no one else had a boonie hat on that day!

Now, here's the good part! There weren't many people left at the flea market, some of the vendors were leaving in disgust, we were wondering if there was anything good left. Totally undaunted by the weather we assailed the remains of the vendor's area. The usual habit for Gene was still accessible the tarps don't cover what's under the tables. I made myself busy poking under the corners of the plastic covers, the vendors were helpful as long as it wasn't getting stuff wet, it didn't rain much after the first downpour, actually late Friday afternoon was great, no crowds! We had first choice of almost everything that was open.

There were more tubes this year than I've ever seen there before.

We talked to some engineers from Harris about the Desert Storm War and the KWM-2A, and cleaning sand from the air filters of the latest sand state equipment,..... get it? Pun, sand state,..... hehehe

One of them had a Bell & Howell oscilloscope setting in the mud, "You can have it if you get it out of here." Well, it works well after

dumping the sawdust out of it! Cheap mod-monitor.

Saw a big pile of Tek stuff with a sign "FREE" on it in the back of a pickup truck, forgot to go back, the tubes would have been worth picking up at the least.

The best part was when one of the gate guards asked what the show was all about,..... they had NO idea. So, stopped and explained about Amateur radio, emergency preparedness, training, hobbies. One of them was in Northern NY when that big ice storm hit and knew about what the Amateurs did to help there, they were the ONLY communication for a big wilderness area. I think I almost had the pretty one sold on getting a license.

I actually met William Perry, the connector dealer, good guy, very knowledgeable.

I saw two antenna tuners for the T-368's there, saw them twice, once for sale and once when the buyer took them apart and left the pieces he didn't want by the garbage cans! I now have a cover for mine that fits! Someone else carried off the chassis for another project, the rest is going ..... to an unknown place in someone's camper.

Ya' see? The diehards know that we can't let a little bad weather keep us from doing anything, that's the benefit of living in NY State, bad weather is no big deal here.

I bought a good 5933 for less than a dollar! Other small tubes I needed for $0.25 each!

It was good!

I saw two vacuum caps that might have fit into the T-368 for $65+-, condition unknown. No other parts for the T-3, some tuning coils for the BC-610, no other parts though.

SP-600 for too much, many other rigs for way-high dollars, too.

Where's the next one,.....?

Joe

# 947. needed: Tube socket extenders for testing voltages on tubes.

Hey Larry,

What you really want is the MX-1258/U TUBE SOCKET
ADAPTER KIT. Mine is from a Navy contract FEB-52. Has everything
you'll need. They show up on E-Thing once in a while. Got mine at
"fest 15 yeas ago or so, wouldn't part with it.

Hi Group,

I was scrounging around on eBay, and came across #1176663844. It is
TM 11-826 manual for the 610.

# 961. T-368 N9FOY Schematics Needs

Yahoo group: T-368_BC-610
Date: 2001-08-14 17:13:47 UTC
From: Bruce James Howes
Topic: 961  Message: 961

Hello gang,

As some of you know, I have recently relocated to Portland, Maine.

I am into process of getting my T368 Resource Site back up (thanks to Steve for saving a printed copy for me)
I now have to retype the entire 25 page site as during my move I lost or misplaced the ZIP disc that had my website info on it.

You can view the humble beginnings here ->
http://home.maine.rr.com/bhowes/t368_info_site.htm

So I am looking for scanned images of the N9FOY audio mod for the T3. If you have the scanned images, or could scan in the paper copy, I would really appreciate if you would email them to me.

Also interested in other T3 images, line art, photos and such as I get the site back up.

Thanks for your help, and I hope to catch you on the air!

73,
Bruce KG2IC

Republic of Vietnam

And I'll take this opportunity to ask that anyone who knows of anyone that was a doghandler in Vietnam to contact me. Many of them don't realize that there is an organization comprised of former MP's, sentries, mine and tunnel dog handlers, trackers, and boobytrap dog handlers out there looking for them.

Ok, ok, enough of that. Back to radios.

Joe

# 967. Homebrew Choke for PA Deck Mod.

Yahoo group: T-368_BC-610
Date: 2001-08-16 17:00:54 UTC
From: daveh@hereintown.net
Topic: 967  Message: 967

After deciding to make the mod to my PA to improve the high frequency audio response I gathered together the necessary parts - several 500pf 20kv doorknob caps and a B&W 800 plate choke that I had on hand. I had doubts about the chokes abilities on 160 but went ahead anyway. Upon testing of the modified deck it became quite apparent that that 800 was not going to do the job on 160 (good very hot and affected the tuning) and really was a bit low on inductance even on 75. (The 800 is a 90uh choke). I know of several who had wound up there own chokes but I didn't have any suitable standard form material such as ceramic of Delrin. I was never a fan of using PVC for RF applications but after a suggestion by K1JJ who swears by it for choke rolling I went to the local hardware store and had what I needed to make the choke for less than $2.

I used standard 3/4" PVC which has an OD of approx 1 1/8". I cut an 8" piece which is as tall as can be mounted in the T3 and used an abrasive hand cleaner to make it look nice. I wound 260 turns of #26 enamaled wire (available at your local motor shop) close spaced which amounts to about 5 3/4" of winding. I used spade bolts to mount the choke to the chassis and soldered a nut to a 1 1/8" dia washer and epoxied this to the top for using a screw to attach the straps going to the tank coil and tube. The finished product looked almost commercial. Now how does it work...So far, very well. Runs cool on all bands. I have used it on 160, 75, 40, 20 and even 15 just to see if it would work there. A grid dip check showed a few series resonances..at 12.1, 18.9 and around 27. The calculated value of the choke was 270uh and a check on a HP bridge (a new fest find) showed it to be 305uh.

I have posted a few pix in the file area to show what the choke looks like and also how and where I mounted it. I have since removed the HV from the plate meter (it's now a cathode meter) so the HV wiring shown in the picture going to the front panel is no longer there.

Since building the choke I have acquired some Delrin rod but I really think the PVC will be fine.

BTW: PVC is great to drill and self taps with slightly larger hardware than the drilled hole.

# 968. T368 Resource Site Back Up!

Yahoo group: T-368_BC-610

# 971. Catalog in the mail!

Yahoo group: T-368_BC-610
Date: 2001-08-23 01:02:57 UTC
From: redmenaced@yahoo.com
Topic: 971  Message: 971

Pertaining to the recent coil construction posts:

The newest Hosfelt catalog came in the mail today. On page 17 they have magnet wire, 400 feet of 24 gauge for $6.75. Also, they show 20 gauge, 112 feet for $2.25!

Then I saw, on page 83, they have a huge resistor, 10" long and 1 1/4" in diameter, 50 ohms at 225 WATTS!!!! $4.95

What kind of dummy load could you make with that with a fan blowing down the middle of the resistors? Two in parallel, that is 450 watts, right?

Joe

# 972. New file/picture

From: redmenaced@yahoo.com
Topic: 972  Message: 972

I just uploaded a picture of the ME-165 dummy load and the T-368 antenna tuner, I'm not 100% sure which one it is but I suspect its the BC-939.

Also, since the picture shows a medallion with the name "Beckwith" on it I suspect that the source of this picture is Gene Beckwith W8KXR in Ohio.

A person whom I haven't heard from since the Rochester Hamfest!!

Joe

# 973. Re: [T-368_BC-610] Catalog in the mail!

Yup, and I believe 25 ohms! I think maybe you want to put 2 in series and run them in parallel with two others in series?

Just my 2¢ worth on the resistors....
Best hope they are the non-inductive type. they work lots better for dummy loads.

brings up a point - I have 4, 50phm resistors configure in series parallel, and what I thought was to be a 1.1:1 SWR turns out to be more like 3.0:1

160w NI long resistors.

Any thoughts?
Just my 2¢ worth on the resistors....

From: Bill
Topic: 976  Message: 976

If my memory serves me right a non-inductive resistor would be a carbon, carbon film or a wire wound that is wound back on itself cancelling the inductance.
I use a large 50 ohm carbon film (wattage rating unknown) but have loaded it to 600 w from a BC610 and have near 1:1 SWR.
Jeff, are you sure those 160 watters are NI?

Group,

I have read about people doing the PA Mods, removing the HV from the Tank Circuit, Meter, etc, and seems most who do this, have some sort of problem. Just curious, but Why do the Mods?. The Radio seems to work FB as is. I feel mine has been rode hard and put up wet many more times than not. Plus, who knows the history of the rig after its Military Service.

If these mods affect the life of the rig, such as keeping something from smoking, let me know. It appears that possibly the meter could be prone to flashover, under some conditions. But the insulation around it appears to be in fine condition. It is going measure the same current no mater where it is in the circuit and take the same abuse to the movement.

I like the audio just the way it sounds. Lots of punch, not much bass, and thus gets through the noise better than some of those really bassie sounding rigs so prevalent on the AM freqs. Sounds much like a Telephone. It seems to look good on the scope just as it sits. I use a M 26 carbon mic with the rig, as it sounded pretty bad with the Magnetic Mic I tried with it. (through a pre-amp into the 600 ohm line input) Is there worth while advantage to doing all the audio mods other than trying to simulate a Broadcast Transmitter? I don't plan to play music through it.

I have not had it on the air as of yet, just playing it into the dummy load for now. I plan to get it on the Old Time Mil Radio 3885 Saturday Morning Net soon.

Thanks,
WA4VAG

Topic: 977  Message: 979

Excellent Joe Munson,
I've been reading the same sort of things about the T-368s, and wondering the same thing. The transmitters were DESIGNED for 24/7 operation, whether in "Fixed Plant" or mobile use, Hot weather, Cold weather no problem. When used in the AN/GRC-26D setup they are bounced around mobile on the back of a "Deuce and a Half" truck, operated mobile rolling up highway 95 in the USA and highway 1 in the hills of P.R. So I wonder if they worked so well for so long in their INTENDED application, "Why would they need to be MODIFIED at all?", it doesn't get any better performance out of the transmitter. Communications wise, "some" of the "modified T-368s" I've heard have great carriers and "NO" audio.

The BC-610s worked essentially the same way, and it seems all anyone wants to do with them is make them more of a "Broadcast Quality" AM transmitter. Some say for "safety reasons the mods should be made to prevent the "operator" from inadvertently getting across high voltage in the RF deck. Well if you are working on the RF deck it is probably pulled out and you have to make "serious" jumpering schemes to ENABLE the high voltage, which means YOU know the deck is HOT because you did it.

In answer to the "History question" the answer is no one! Lots of these rigs ended up in the mars program where some were MODIFIED to run as "Linear" amplifiers bypassing, "sometimes documented", modulator circuitry. They were later sold to someone who wanted to "restore it to original" and the documentation got lost, eaten by the cat, burned in a volcano, or "I just can't find it", gone. A newly designed transmitter is prone to all the defects some find in the T-368 arcing, noisy fan motors, clogged intake filters. These transmitters have lasted this long, to be handed in some cases very unceremoniously to the Amateur Community. Where they are placed in a comfortable place for the "operator" to be, they generate heat, and require massive amounts of AC power. I think these folks just like to complain about the "OLD" technology, but consider the ease with which that same technology is brought back to a usable state.

Keep it the way it works best Joe Munson, and it will out last the "changers" and all of us "others".

Yes, those two comments cover it well.

Besides, that's what we're supposed to be doing,
experimentation and training.

Great idea on the T368/BC610 net!

Respectfully, I personally don't think it is a good idea to run nets in the AM window.

Why not use a freq out of the window, say 3.815? The Buffalo AM gang has been operating there for years.

You can operate AM anywhere in the Fone band, and by having several AM QSOs going at once across the band it reinforces to those that do not partake that AM can and will be found anywhere in the Fone band.

What do you guys think?

I also think that it's a great idea to have a T-368/BC-610 net.
However, the East-Coast OMRN (Old Military Radio Net) is already in existence and meets each Saturday starting at 5:30 AM on 3885 KHz. Of course, many of us who participate in this net, run T-368's and BC-610's anyway, so all owners of such "Old Military Radios" should check in the OMRN.
Just a thought - because there is net activity on 3885, maybe it'll bring more T-368/BC-610 owners out of the woodwork...

It's as simple as this, Guys...

the AM "window" is from 3.870 to 3.890, right?

Most AM QSO's are from 3.880 to 3.885, right?

Designate the Net freq to be 3.875.

From: Gene Beckwith
Topic: 972  Message: 991

Joe,

Greetings...Yep, after the Rochester fest, I got well beyond busy!! That has kept me off the keys and out of the Shack!! (ughhh....!!)...but, I'm still out here in radio land and sorta catchin up....

Hummm, not sure what pix ur talking about..would like to see it...I do have such a tuner, and dummy load...but the medallion? What Pix?

Was involved in a Safety Break sponsored by our Massillon Ohio Radio club ...we had a full week over the Fourth of July on Rt. 77 south of Massillon..It's our main fund raiser for the year...and a lot of fun....we have about 100 members in our club, but as u might guess, not all supported this particular event, so it was a little intense to keep it covered 24/7

Also dug a 4x4x5 foot hole in my back yard for the new tower...did it by hand with the help of another friend...K8MGC...temps were near 100 degrees, hottest and driest July on record for our area...builds character and tests fortitude...I guess...or just plain nuts...then we poured the concrete a week later...!! Yikes...it was still near 100 degrees again and we moved it by wheel barrow...even the XYL pitched in to level the soup in the hole while we wheeled...Wow....we were beat...

Then got ready for Camp Perry...loaded about 250 rounds of 308 for the M1A and headed up to the Base (Ohio National Guard Operates it) for the National Matches and High Power School with another guy whose main hobby is precision shooting...we went to "Long Range School" for five days...range practice was at 800 and 1000 yards. Coaches and teachers were members of our U.S Military Marksmanship Teams, all branches...and some international competition shooters...It was an outstanding experience, to be around people who actually know what they're doing...and can demonstrate it at will...but used up a bunch of time not spent on the rigs or station, or antennas.

Then, we finished up some major work on the "Digs" that involved all the mulch in Ohio, and most of the top soil...(some of it used to hide the tower base from the neighbors)...and in between the above, we made a trip to Des Moines, Iowa to visit my son and his wife and new little grand daughter...about 1500 miles round trip...(blew AC on my Suburban in the heat...wife threatened to thumb down a trucker and ride with him the rest of the way home...she didn't have any plans for me! I was to get "this thing" back the best I could...(ok, OK, only joking!! Missy Marilyn is a good sport and a great traveler...but it was a warm trip...still near the 100 degree mark on the road...

...and have been back to Batavia for visits with Wife's mom and Dad...the Dad is in the VA hospital there...so we try to help out when we can...I visit with another guy who is an avid shooter and neighbor there, so the time is

well spent comparing notes and telling lies...

And there's more, but u get the point...Oh yes, I did mix in a few local fests and found a Dentron 160 meter transverter in like new condx, an Ameco 6n2 for local "AM" work...and a Gonset, G50 for more 6 Meter AM stuff on the local "AM" links this winter....and tubes for the SP600 JXC-17 I got at Rochester.

.It's a real "Gem" and nearly mint...it even worked when I brought it up on the variac, but am going to replace electrolytic in the ps...easy job...leave the originals and add some fresh on a terminal strips under chassis...it will look like it was designed that way when I get done...there's lots of room...also found that this one already has disk ceramics!! What a surprise...'cause I thought I'd spend a month doing a cap job on it...it's a beautiful rcvr, still has its took kit in place and anodized red aluminum knobs. It is a great testimony to the Rochester Ham Fest that was as good as any I've been to in recent years...If any one missed it...tough!...it jist left the SP600 for me...!!... and the several sacks of other neat stuff Joe and I carried out of there...Great Fest and I thought the prices weren't too bad and there were enough Boat Anchors and Canoe Anchors to keep it interesting...missed a beautiful pair of Hallicrafters that would have been my second hit, but I ran out of loot.....dang!.

By comparison, the Rochester event was very good...I found a good assortment of tubes...they were in abundance...plus I picked up Two (2) rack mounted power supplies, fully metered, and in only dusty condx for fifty bucks for the pair...both are already in service, one in each op position powering local 2 meter stuff....what a deal...and some folks spend $150 for a 'Ham' grade reg supply...sob, sob....

In general, attendance at the fests here in NE Ohio has been down...fewer tail gaters and fewer vendors...but odd how one can still bring home the real nuggets...how about a 25 amp like new isolation xformer that weighs in at near 50 lbs...and ten bucks..!! (Batavia, N.Y.) It's going to run all my rcvrs as soon as I can carry it over to the Shack from the bench...and how about a like new Heath vhf dual meter swr/power bridge with the book...working...five bucks...at Warren, Ohio...Darn it cracks me up when folks whine about nothing going on at the fests...had a great hunt so far this year and still planning on Butler, Pa, Cleveland, Ohio, and the Massillon, Ohio fall fest and auction...Yep, they still do an auction and its a lot of fun...

But for the money and size, the Rochester event was the year's best to date, and I have the impression that attendance was at least as good as last year and maybe up...had to park a looong way away this year for the first time...in a looong time...but I haven't heard anything official.

So, there you have it Joe...Things are really busy hr but that's great and looking forward to cold wx and moving inside for work on the station and some one the air time...

73,

Gene
W8KXR

"The Radio Voice of Clinton Ohio"

Ps...Joe, sorry for the long down time...and will still be pretty intense for a few weeks yet...but the 160 M dipole is up and I'm looking for a BIG Dentron tuner for 160M something big enough to keep the T3 happy at about 450 watts out...more later on the "Frenzy" here at W8KXR...

agn 73,

Gene

The net started at 8:00 PM on schedule with K2JVM calling K8VWX down from 3.890 to join us.

We got off to a slow start as N8LUV joined the crew followed by W2PFY who stayed for the duration while trying to cook and eat his dinner in the Adirondack Mountains of northern New York State. His station put out a good, strong, clear signal from his remote cabin powered by a Generac generator powering a 1942 Hallicrfter's BC-610C!

There were 17 check-ins as the night passed.

All stations were quite strong using the T-368's and BC-610's others who checked in with DX-100's and others weren't as loud, but all were copied through the static and QRM.

Included were:

WA1VQM BC-610H
AA9Q T-368 BASIC
W1FRM Homebrew
KX4R T-368C
N8ILV ?
W2KBW Homebrew
K1KHP T-368
KZ3AB DX-100 (T-368F In pieces)
W8MNQ BC-610E
WB1CJO ?
KC2DMC Homebrew
N0VMC T-368A, F, E
N8ECR BC-610 (In pieces)

Net closed at 10:00 PM Eastern

# 997. BC-610 mod transformer FS

Yahoo group: T-368_BC-610
Date: 2001-09-12 01:12:47 UTC
From: redmenaced@yahoo.com
Topic: 997  Message: 997

I grabbed this from the AM Window BBS, E-mail Tom, QRZ.com should have his address.

Joe

I have a Stancor modulation for the earlier models of the BC-610. It is the open frame design with cast Iron end bells. I would like to trade it for the later version potted transformer that works with my BC-610I. If there are no swap candidates out there, I would take offers.

Thanks,
Tom N5AMA

David,

The spare T-368 transformer I have carries the number "TF-1C-14YY Special."
Also lists the primary as 20,300 ohms CT and the sec. as 9100 ohms. The unit
measures
5 1/4 X 6 1/8 X 7 inches, has 5 terminals coming out the bottom through
ceramic insulators 1 1/4 " high including the solder lugs. Weighs in at
around 25 lbs.

Hope this helps.

Glendale, CA

# 1002. T-368 production

Yahoo group: T-368_BC-610
Date: 2001-09-18 20:11:37 UTC
From: W2ZR@aol.com
Topic: 1002  Message: 1002

Hi Gang,
The last time I updated the registry, I noticed we had reached a small milestone. There are 50 rigs now listed in the registry and I have reason to believe that number is going to jump noticeably very soon.
Like the R-390A so many of us love, the T-368 was built by a number of manufacturers. There are nine manufacturers represented in the registry. They are B&W, AMF, Daystrom, Crosley, Bendix, Stromberg-Carlson, Oneida, TRW and ECCO. Does anyone know of any other manufacturers?
B&W had the first three contracts, as well as two later contracts, and likely designed the rig. Anyone know about that?
The earliest rig in the registry is from the 1952 B&W contract and the latest ones were from the 1967 ECCO contract. Boy that's pretty close to the R-390A production, isn't it!
The total of the high serial numbers from each contract is 3,573 but it's possible a much greater number were built. While one of the rigs in the registry wears serial #628, other contracts are only represented by rigs with two digit serial numbers.
If you've got a T-368 and haven't registered it or your info is incomplete, please send it to me when you can.

73,
Steve W2ZR

Ok, I finally got mine opened,

My transformer says TF4TX14YY-special

20,300 ohms 225 mA..... 9100 ohms 275 mA

Frequency 300 - 3500 cycles

Power 250 Watts Max.

Freed Transformer P/N 39291

SM-C-185156

If the "UTC" part of the codes refer to it being mfr
by UTC, they have a website listing specs on their
products. I have it at work but not here (nome). If you
can't find it with search engine, drop me a note and I'll
send it to you.

Ahem,
Make sure all the vacuum caps (3) are in it. These "NEW" units were
packed for shipping by the government with this unit in one container
and the vacuum caps in a separate container, with the connecting cable
manual and mounting hardware in still another container.

# 1013. Re: [MV] S.1416 update

Yahoo group: T-368_BC-610
Date: 2001-09-26 20:45:48 UTC
From: Joe Foley
Topic: 1013  Message: 1013

This concerns a bill before the Senate regarding the
confiscation of "Significant" military equipment and
destroying it.

It could certainly mean radio equipment!

Joe

# 1015. R-390A Antenna Connector

Yahoo group: T-368_BC-610
Date: 2001-09-28 18:28:04 UTC
From: Hagan, Reid J
Topic: 1015  Message: 1015

Does anyone on the list know of a supplier that might have one of the unbalanced antenna connectors for use on the R-390A??? I believe it is nomenclated: UG-943B/U. Any help will be greatly appreciated!

Reid <w2hu@...>

# 1016. T-368 question

Yahoo group: T-368_BC-610
Date: 2001-09-28 18:27:33 UTC
From: plmills@attglobal.net
Topic: 1016  Message: 1016

Hello,

I'm finally trying to get my project T-368 on the air.
One thing I've noticed is that the vfo (and/or multiplier)
stages run continuously. Is this normal? Is there an
easy way to cut them off for receive periods?

BTW, I had problems with flashover around the plate current
meter. It turns out that the meter mounting screws coming
in from the front panel were so long that they went almost
all the way through the insulating ring....F model from Oneida.

any and all help and advice welcomed, 73,
Phil
W5BVB

Phil,

The multiplier stages normally run only if the transmitter is keyed, either via the push-to-talk relay or S6 on the front of the modulator chassis (positions labeled "key Continuously" and "Normal").

In early T368 models, the PTO runs continuously. I don't know when the change occurred, but later models killed the B+ to the PTO as well. This change was retrofitted into some earlier units as well (my "C" model includes an obvious field mod to do this). I'm surprised your "F" doesn't include this change.

No problem here, though, with letting the PTO run. My "Basic" unit is unmodified and I can just barely hear the PTO in my R-390A if I disconnect the antenna and turn the gain way up.

I've never had any problems with the plate current meter in it's stock configuration, BTW.

From: w7qho@aol.com
Topic: 1016  Message: 1018

Phil,

Follow-on to my previous e-mail.

Check your "F" model for a switch up on the RF deck which gives the option of running the PTO continuously or only when keyed. I seem to remember this was included on some later models.

++++++=
Ah, yes,

Another mystery of the "F" model! I have that switch,
too. It's "S15" in the right rear of the exciter,
behind R4.

Of course, we have no schematics for it, or mention of
it in the manuals.

Has anyone seen a "G" model T-368?

Joe

# 1021. T-368 osc keying problem solved

Yahoo group: T-368_BC-610
Date: 2001-09-30 13:42:51 UTC
From: plmills@attglobal.net
Topic: 1021  Message: 1021

Thanks to Joe Foley for pointing me in the right direction.
All I had to do next was RTFM (computerese for Read The
F... Manual). Change C-5 describes wiring to relay K9 on
the modulator deck that allows it to remove the B+ to the
master oscillator and first buffer. Switch S15 on the
RF deck simply shorts out the relay contacts to let the
oscillator and buffer run continuously. Pot R74 on the
modulator deck allows adjustment of the delay time on K9.
I've now adjusted my unit to drop out after a very short
delay.

thanks & 73,
Phil

Hello Reid--

the unbalanced connector is a "C" connector. I Surplus Sales of Nebraska has an assortment of these C connectors and/or adapters to other series and the RF connection (www.therfc.com) carries some adapters between the "C" connector and other series such as "N" or BNC. Unfortunately "C" connectors & adapters are scarce and seem to be exhorbitantly priced even used-- pity, in that they seem to offer the robustness of an N (and then some) with the quick-connectability of a BNC.

If anyone knows of a more economical source of C connectors please let me know as well-- I can think of places I would like to use them in a new shack I'm building if they weren't so darned expensive

# 1023. Re: [T-368_BC-610] Re: R-390A Antenna Connector

Fair Radio has "C" connectors, William Perry has "C"
connectors AND I saw some on a table at the Elmira,
NY hamfest, too!

Not only that, but Fair has them on a 6' piece of
coax, fine for connecting the R-390A to the T-368!

In a nutshell....

The HT-4 was the original Hallicrafters transmitter from whence the BC-610 was derived. The rig was introduced in 1938, covered 160 through 10 M. The original price tag was $695, a fortune in those days. The tube line up included an RK-63 in the PA and a pair of RK-38s for modulators.

The Army got hold of it along about 1940, made some serious ruggedizing upgrades and other changes including using a 250TH in the PA and 100THs as modulators, and the rig went on to fame and glory as the BC-610 (in various models).

Hallicrafters offered the HT-4 again after the War for a while but probably didn't sell too many what with all the surplus 610s kicking around.

For everything you ever wanted to know about the BC-610 see ERs #126, 127 & 128.

the HT-4 was the civilian version of the BC-610, from Hallicrafter. There was no difference in frequency coverage, I don't believe. Same 250TH, same pair of 100TH's. The Rig was the same - coil set wasn't as broad in range, providing access to the (then known) ham bands, only.

Wasn't that back in the days when 40m was CW only?

Saturday night I finally got to talk to W7QHO in California!!

We had a QSO going for hours with almost 30 check-ins! At about midnight K1JJ and N2INR suggested trying to "DX" some west coast stations but the noise was LOUD!

Even so we were able to get out to Dennis W7QHO and Roger KD7HH in Wyoming. There were stations from Texas and Arizona but the noise made it too hard to copy them,.... maybe this winter.

Also, K5LH, VE5KGE, WA2NFF were there.

In a nutshell....

The HT-4 was the original Hallicrafters transmitter from whence the BC-610 was derived. The rig was introduced in 1938, covered 160 through 10 M. The original price tag was $695, a fortune in those days. The original tube line up included an RK-63 in the PA and a pair of RK-38s for modulators.

The Army got hold of it along about 1940, made some serious ruggedizing upgrades and other changes including using a 250TH in the PA and 100THs as modulators, and the rig went on to fame and glory as the BC-610 (in various models).

Hallicrafters offered the HT-4 again after the War for a while (up through at least 1950, see ER #126) but probably didn't sell too many what with all the surplus 610s kicking around. The HT-4E as seen in a 1946 Hallicrafters advertisement looks just like a 610E and used Eimac bottles.

For everything you ever wanted to know about the BC-610 see ERs #126, 127 & 128.

Hi heavy iron ops. Just a thought on a T-3 operating event. I recall about five or six years ago, Dale KW1I proposed a Christmas day greeting "test" in Electric radio for T-368s on 18.150. The conditions were poor and I only heard Art WA6? with a BC610 working Dale (did not hear KW1I) Not very successful. Any thoughts on trying again this Thanksgiving , any time of day on 18.150Mhz?

I have an opportunity to locally purchase a T-368E with tuner, wattmeter, and all TM's. It is a TRW make and fully in tact. The copper chassis is shiny. Overall condition is CCA VG. What is a fair price to pay for this? Your help is greatly appreciated.

Subject: T-368-C FOR SALE

I have for sale, in the northeast Texas or northwest Louisiana area, a
T-368-C transmitter with some spares and a original manual. All original
including paint except some reversable "Electric Radio" audio mods. Works
very well with full output. Prefer pickup but can be delivered to the
Houston area. A T-368 exciter and other parts are also available. Asking
$1200 or best offer for the transmitter.
Can be viewed at:

# 1056. T-368 problem from new member

Yahoo group: T-368_BC-610
Date: 2001-11-14 22:42:25 UTC
From: redmenaced@yahoo.com
Topic: 1056  Message: 1056

This was taken from the AM Window BBS:

Gents,
I have been working this for 2 eves and no progress. My loyal T3 is dead.
I also discovered I have a manual that differs from the rig (Manual 1955, rig is an "F" '67).
Symptoms:
-Will not key.(no: plate voltage relay, volts, current)
-I see -65v across pins F and gnd on the carbon mic input (should be -35?)
-When I do try to key the rig I see Int. Amp Plate current but no PA Grid drive or plate current.
- Also, keying does not cause the plate relay to close.
-I can force the plate relay to close and I see 100ma plate current if I use the "plate relay swtich" and "continuous keying" switch. (seems like plate relay and interlocks are ok)

Could it be the keying relay? Then why would I see IPA current when I key?
This is where the documentation is a problem. My mod deck is different from the manual. The K2 keying relay does not exist and I have additional tubes V21, V22 and relay K9...what are they??

This rig has me stumped and I'm not even sure I am isolating the problem to the right spot yet. If any of you T368 folks have advice I would like to hear from you. Off line would be fine. I was told there was a T3 reflector on the www. Does that still exist?

73
Tom

Then he says:

Hi Joe,

Yep, please sign me up for the reflector. I ran through the cockpit procedure and all seems proper. Fuse and tune-norm switch in HV are ok. The inability to key the rig and get grid drive is pointing me to somewhere earlier than HV but I'll double check that HV deck tonight.

Also, since I dont have a K2 keying relay do you know which relay is the key?

Interesting, my modulator deck is earlier than an F model. The date codes show 1959. Does your rig or documentation have V21, V22 (near the 0A2 string) and K9? What are they?

73
TM

Sounds like Tom is looking at the schematic for the very first or "Basic" model of the T-368. In later models, K9, V21 (6AH6) and V22 (6AH6) were added. The tubes control the action of K9 which is called the "slow release relay" which performs the functions of the keying relay K2 in earlier models (and does some other stuff too). First thing he needs is documentation for a C or later model.

I had something like this happen to my C last year during Vintage FD. The keying tubes V21 and 22 get their heater current from a transformer over on the speech amplifier chassis. Bad connection in J3/P3, keyer tubes dead and transmitter wouldn't key. Re-seating the connector fixed it.

# 1058. T-368 tune up

Yahoo group: T-368_BC-610
Date: 2001-11-20 05:24:38 UTC
From: Joe Munson
Topic: 1058  Message: 1058

Group,

I finally got the T-368 cleaned up, and back together. I only have a partial manuel, and can find no info on how much current the final should draw, unkeyed, and how much the modulators should pull on voice peaks. I have finally got some audio through it, but sounding nasty, with lots of hum, ane only in the "tune" instead of the "normal" position. When I throw it to the "Normal" position, unit idles just fine, but once speak into the mic, all heck breaks use, much flashing going on, as I can see blue reflections in the window of the shack, and the main breaker lets go. If some one would be kind enough to repy to me, with a phone nunber and a couple of different times and days as to when I could call you, I would like to pump yer brains on the T-368 and tuning prodecures.

thanks

Joe

+++++++
This sounds kind of like what I had when I started
mine.

Make sure the spark gaps are set according to the
manual. Fair Radio has good copies of the "E" manual.

Check the condition of the insulation on the HV wiring
in the power supply deck. If its cracked it will arc
under load especially under the 3B28 sockets and where
the two HV leads go from the plate transformer to the
caps of the 3B28's.

Mine had no smoke marks or damage from this so it was
hard to find. The insulation looked like a dry-rotted
tire but no wire showing through. It was evidently
arcing where it crossed wires of the opposite
potential and/or to ground.

Joe

Hi All,
I think the guy made a mistake. I have (1) E-model, (2) I-model, they use Marion meters. Those might be from the BC-614 Speech Amp, but I doubt it as mine are all Marion there as well. The Scale is blurry but looks like 0 - 300 MA, which would tend to point to a Speech Amp, as the Plate meter goes up to 500 MA on the BC-610. Probably from another Hallicrafters rig.

# 1065. BC-610 modulator deck build

Yahoo group: T-368_BC-610
Date: 2001-11-24 16:57:06 UTC
From: Gary Pewitt N9ZSV
Topic: 1065  Message: 1065

Some time ago I bought a stripped down BC-610E and have been accumulating parts to restore it. I had found everything but the mod deck. Robert Downs was kind enough to dig out a chassis and is going to search out the rest of the parts for me. Since I will be building the deck from the chassis up it occurred to me that some modifications to improve performance might be in order. Was the E model mod deck satisfactory as issued, or would it be worth while to make some changes? Do you know of a good source for any mods?
I know from listening in on 3880 and 3885 that some of those fellows running 610's have a -very- nice signal. I have heard that the speech amp also left something to be desired as issued. I have two of them, one complete and one that needs restoring. So it wouldn't be a crime to modify the incomplete one. I've heard that some people have used a powerful audio amp as a replacement for the regular speech amp along with audio mixers and other studio type equipment. I don't know if I want to go that far but I do want a nice clean am signal. Maybe I should leave the E model stock and make any changes to my I model. If it needs any that is. Any advice or pointers gratefully accepted. Thanks and 73 Gary

The following items are available. I talked the heirs into giving
you BC-610 lovers first crack at it otherwise it heads to eBay
where they think it'll go for zillions of $$$$. They will accept
offers so if you're interested, make a reasonable offer, better
still, make an offer on the whole slotch:

TU-53/BC-610 RF Tuning Unit, 8.0-12.0 mhz, good
Tuning Unit condx, Missing VFO knob, Mfr: 1945.

TU-48/BC-610 RF Tuning Unit, 2.5-3.2 mhz, good
Tuning Unit good condx, complete.

BC-610 Xtal FT-171B Excel condx, 2220 khz

BC-610 Xtal FT-181B Excel condx, 2125 khz

All buyers pay for postage (no charge to pack and take to USPO/UPS
(your choice). Shipped from central Fla (ZIP 34442)

The lastest word from the archeology department is that an item of interest has been un-earthed at the Fair Radio dig.

Its a modulator deck from a T-368, condition listed as poor, details to follow, film at eleven!

Joe

There is a complete and working BC-610 "System"
with working BC-614, and BC-939 Antenna Tuner.
All Refurbished, and working @ the E-pay place!

# 1073. Re: [T-368_BC-610] Has anybody seen one?

Yahoo group: T-368_BC-610
Date: 2001-11-28 19:38:46 UTC
From: Ken Warren
Topic: 1067  Message: 1073

I have had a couple of requests to describe the T-946/GRC-129 transmitter which is the SSB successor to the T-368.

The power supply chassis and the cabinet are the only components that remain unchanged. The main rf deck was pulled and scraped. The new rf deck contains a PL-172/8295 final amp and a low level rf amp for the new signal which is fed in from an external source. It is band switched in 4 bands from 2-30 MHz. The frequency steps available are 250 Hz, 500 Hz, 750 Hz, and 1KHz depending on which band you have selected. It is really nothing more than a linear amp.

The modulator deck has all of the AM components removed and now contains power supplys for the low level driver amp and a new microphone amp with the output sent to the multi-mode exciter which is external to the main cabinet.

Mounted to the top of the cabinet next to the antenna tuner is a short 19 inch rack mount frame to hold the O-1202 frequency synthesizer which generates all of the necessary frequencys for the transmitter and the frequency stabilized R-390's which are now redesignated R-1247. Also mounted in the rack is the CV-1695 amplitude single side band converter. The signals from the O-1202 are fed into the CV-1695 along with the audio from the mic amp in the transmitter cabinet, mixed, filtered and the resultant desired frequency RF output is fed back into the RF deck for amplification.
The modes available are USB, LSB, COMPOSITE AM, FSK+AM, FSK, CW.
Signals from the O-1202 are also sent to the O-1203, CV-1693 and CV-1694 which provide stabilized signals for the PTO and crystal bank in the R-1247 receiver. The CV-1694 is a product detector for the receiver.

When everything works, it works well however the O-1202 synthesizer is a real pain to work on.

I have used mine on the air a few times, however it is in need of a few minor repairs now.

# 1074. T-368 Question

Yahoo group: T-368_BC-610
Date: 2001-11-28 22:29:55 UTC
From: Robert Moody
Topic: 1074  Message: 1074

Fellow users,

I have just started to get my T3 going after it has been sitting here for over a year.

Everything seems to work fine. However, the osc runs all the time and blanks the rcvr when the plates are turned off.

Is there a modification which needs to be added to cure this?

Thanks for any help or suggestions.

Bob, W4WSZ

Bob -

To the best of my recollection there is a toggle switch right behind the VFO. It has to be placed in the other position then it will key the VFO normally. 73 - Mike

All,

This question seems to come up every few months. In models up through the "C" (at least) the PTO runs continuously. Later models keyed the PTO too, but included a switch up on the RF deck to provide the option of doing this or not. The F model reportedly does this but I don't know when this feature was added (D and/or E?).

Now, in those models with the switch the PTO signal is apparently quite loud. In my old
Basic (non-keyed) model, however, the PTO signal is just barely discernible and causes no listening problems. I wonder if others with the older models find this to be the case too? Please give us a report. I might also add that my C model was modified somewhere along the way to key the PTO but doesn't have the switch. Has anyone else run into this field mod?

+++++++
Nope, Bob,

That's not what's happening here.

I think you've crashed into the dilemma that all of us have had with our T-368's, that is, trying to determine just which model all of the modules actually are from.

My RF deck is an "F" but has an "E" tag on it, the power supply deck is probably from a "D" model, maybe a "C". The modulator deck is definitely an "F" because it doesn't match the latest schematic we've found, that being for the "E" model.

That switch is right behind the big resistor on the right side of the RF deck, next to the plug that gets removed to take out the exciter module and in front of the plug that is removed to take out the RF deck. You could miss it if you don't take the RF deck out.

If it's not there then you probably have a "C" model RF deck. Good thing Dennis and Mike showed up, I'd forgotten about that switch!

Bob,

Do you have the lead from the "FSK" connector on the front of the RF deck still plugged into J-102 (located on the rear of the exciter chassis next to V-102)? If so, unplug it and see what happens. This runs all the way across the RF chassis and can act like an antenna. While you're at it might as well unplug the lead to J-104 too. You don't need either of these in place unless you're running RTTY.

Hi All,

Does anyone have a spare speech amp they are willing to part with?
Reasonably complete (with transformers and connectors) is a must but it
doesnt have to be working or pretty.

I will be changing the tube lineup on a project buildup.

YES!!

HT-4's are definitely welcome here!!

So are T-946's.

Feel free to upload a picture of your station to the
files section or the picture section.

Should we start an HT-4 registry? Someone's already
doing the T-368 registry, and another has the BC-610
registry. They get posted to the list every month so
we can keep up with any updates.

Yes, start an HT4 registry. I have one and I'd like to know how many more are out there.

Also, I'm looking for the plug-in, 160M air-padder-cap for thew HT4. Anyone ever seen one or have one?

Hi All,

Is there a URL where I can find recommended mods for the RF deck of the T368? I would like to get the B+ off the meter and tank circuit. I looked at the WA1HLR modification on the "AM Window" page but was wondering if there are other ways to go that may be even more effective with (most important) less work.

There is a discussion of the audio mods here with some pictures:

http://groups.yahoo.com/group/T-368_BC-610

Also, check the home page for this list at yahoogroups.com, search
for T-368, and click on the July listings for "Hot Choke".

# 1091. T3 Restoration

Yahoo group: T-368_BC-610
Date: 2001-12-03 02:09:57 UTC
From: aidehua@aol.com
Topic: 1091  Message: 1091

Who restores T-368's in Los Angeles? I'm sure this unit (which I do not own) works okay, but it could use a full paint job, plus alignment and complete check out.

Thanks,

Ed NI6S

# 1094. Re: [T-368_BC-610] HT-4 Owner Pics and diagrams follow up

Yahoo group: T-368_BC-610
Date: 2001-12-04 23:15:45 UTC
From: Joe Foley
Topic: 1086  Message: 1094

Go to:

Yahoogroups.com

Put: T-368 into the search window. That will get you
to the home page for this list, on the left you will
see the choices for "files" and "pictures". There is
nothing in the "pictures" area at this time.

Joe

# 1095. KA3OTT's webpage

Yahoo group: T-368_BC-610
Date: 2001-12-05 01:08:31 UTC
From: redmenaced@yahoo.com
Topic: 1095  Message: 1095

Here you will find information on the field modification that has to do with the PTO switch in the "C" model T-368. Also, a good treatise on starting up an unknown transmitter.

Thanks, Ed

# 1096. Narrow Band FM with a T-368?

Yahoo group: T-368_BC-610
Date: 2001-12-05 03:52:17 UTC
From: redmenaced@yahoo.com
Topic: 1096  Message: 1096

Here's a challenge from the AM Window BBS page.

The manual says:

With an external exciter the T-368 can broadcast narrow-band FM.

Anyone ever try this?

What exciter is used, or is typical for this mode?

Then we have to have the appropriate grey receiver to go with it.

Joe KG2CI

: : is FM allowed on 75mtrs?

: Narrowband FM is certainly allowed on 75 meters, as well as on 160,
40, and all other bands where we AM'ers like to hang out. I would
love to try some FM tests, running my 20V at full carrier power
output (up to 1100 watts), substituting an FM exciter for the
oscillator and disabling the AM modulator.
: It would be even more interesting to try a test that was tried by
WQYK in Florida some years ago. They ran sliver-band FM (+/- 1 kc
deviation), using an FM broadcast exciter running at 101.0 Mc and
using a prescaler to divide by 100 to arrive at WQYK's frequency of
1010 kc. They had a receiver which could upconvert the received
: mediumwave FM signal and multiply it in the IF to reconstitute the
+/- 75 kc deviation. Although WQYK still superimposed some AM (which
would be illegal in amateur radio) to ensure compatibility with
regular AM receivers, I would love to try this with pure FM on 1885
or 1890 kc. Does anyone have any ideas about the special FM receiver
that the WQYK engineers used for their test?
: It might be worth a try; it could eliminate the noise on 75 and 160
meters, it would allow us to run a full 1500 watts of carrier, it
would eliminate the audio rectification type of RFI, and, if we could
expand the narrow FM signal in the receiver, we should be able to
obtain BETTER fidelity than we currently get with AM.

: Any takers?

: Phil K2PG

# 1101. t-368 "f" model service manual...

Yahoo group: T-368_BC-610
Date: 2001-12-06 23:32:30 UTC
From: aa9wq
Topic: 1101  Message: 1101

Hello All. Happy holidays to every one. Things are well with my T-3 although I haven't had much time to play lately. I have a friend "N0VMC' that has a "F" model and is looking for a service manual. I would like to find one for him. He is a super great guy to talk to on the air(If any of you have talked to him you know this already.)I would be glad to pay for a photo copy or a whole manual. What ever I can find. Thanks every one.
73's
AA9WQ
Happy T-3ing....

# 1102. Re: Trouble posting e-mail.

Yahoo group: T-368_BC-610

From: kd2nx@att.net
Topic: 1102  Message: 1102

Hi Joe,

Actually, they BOTH work... but to keep it official just
in case AT&T decides to goof around, use
kd2nx@... for sending postings to me. I've
been trying to send posts to T-368_BC-610@yahoogroups.com
but they've been getting bounced back. I'll try it
again and see what happens by sending a CC to it.

Thanks,

Steve

# 1103. T368

Yahoo group: T-368_BC-610
Date: 2001-12-07 00:52:47 UTC
From: k1khpjohn
Topic: 1103  Message: 1103

I own two T368's. My T368C is here in Cape Coral,Fl. I usually check in the OLD MILITARY RADIO NET Sat @0500 3885Khz.Here in Florida we are trying to start an AM net on 3880 Khz Wed. @2000 hrs.Also there is active AM net Sun.@0730 on 3880Khz.Basic audio mods have been made.Planning to modify RF deck later.I sometimes operate on 7290 Khz,14.286Mhz. and 18.150Mhz

My other T368 is an "E" model. It's setup in New Bedford,Ma.at my brother's commercial building.Basic MOD>and RF decks have been done.I use external audio processing. Frequency response is 100Hz to% Khz.

# 1104. Addition to HT-4 Registry

Yahoo group: T-368_BC-610
Date: 2001-12-07 00:53:58 UTC
From: kd2nx@att.net
Topic: 1104  Message: 1104

Hi Everyone!

I may as well add mine to the list as well... Maybe
this'll get the ball rolling!

Steve Davis, KD2NX

HT-4H, S/N 156 (It has an MFP date of August, 1951)

For what it's worth, My matching HT-5G speech amplifier
is S/N 101.

This combination of HT-4H/HT-5G is exactly what my
Hallicrafters manual says it should be. I would have
thought that the suffix-letter would have been a match,
but not so in this case.

Mine not only has the 2 to 18 MC coverage, but is also
has the extended range of 18 to 30 MC with two extra
plug-in tuning units, TU-55 (18 to 24 MC) and
TU-56 (24 to 30 MC) and a single tank coil covering the
range of 18 to 30 MC. Does anyone have any information
on these? The manual makes a very short note of the
extended 10-meter range and using the tuning unit in
Position #1, but that's it. I never knew such a thing
existed until I acquired this monster. Any insight,
whole or in part would be appreciated.

73,

Steve

I understand most of the T368's were used by the ARMY. I noticed one was on the USS NEW JERSEY. Did other branches of the military use T368's? I talked to my brother today and asked him to get the ser.# of my T368E.

We had them in the Air Force. Not in vans, mostly in fixed locations (buildings).

# 1111. T-3's & TVI?

Yahoo group: T-368_BC-610
Date: 2001-12-10 17:30:36 UTC
From: kd1ytr390a
Topic: 1111  Message: 1111

Hello to all in the group. Am making slow but sure headway in shack and antenna construction and hope to have that all done in order to have my T-368E on air some time this winter or early spring (assuming no major problems are encountered when taking the T-3 out of mothballs).

I would like to ask group members what experiences and observations you all have had about the T-3's susceptibility to causing TVI problems or other forms of RFI (telephones, stereos, etc.). I know that 400+ watts of AM carrier may quite readily find its way into consumer devices (my former Collins ART-13 was devastatingly effective at taking out certain TV channels). I will be following all recommended/ good practices like using a low pass filter, a pi-network antenna tuner that behaves as a low-pass, and a good ground connection/ system on all equipment. I would like to get my T-3 on the air with a minimum of disruption to family and neighbors. I am fortunate to live in a rural area, and the antenna (home-brew contraption derived from HyGain HyTower Vertical) will be 150+/- feet from my own QTH, and hundreds of feet from the nearest neighbors. No CATV in the neighborhood; some folks have dishes and some have TV yagis.

I would appreciate any observations or suggestions on what others have encountered and any preventative or corrective measures you've used to clear up TVI or RFI when using your T-3s.

Thanks, 73, and Happy Holidays
Trevor, KD1YT

# 1112. RE: [T-368_BC-610] T-3's & TVI?

Yahoo group: T-368_BC-610

Topic: 1111  Message: 1112

Trevor,

I have never had a TVI complaint. I run my T368F on 160 into an inverted L. My home TV was connected to a (cheap radioshack) yagi and the Inverted L terminated within 10 feet of the TV antenna. No wiggley lines on ANY channels and I am in a modest TV signal area. The TV itself is within 5 feet of the T-368 and it is a 10 year old Hitachi.
I do not use any high pass or low pass filtering; it has not been necessary. I have also spoken with the nearest neighbors and they have no problems except for one using a 49mHz phone. I think with those all bets are off.

I must add that I have gone to great pains to make the inverted L efficient. There are 30+ radials and a few ground rods around the feed point. Coax runs from the matching network to the T3. When I first tried the inverted L with only 2 radials, the telephone started ringing, answering machine answered, garage doors went up and down etc.

After cleaning up the grounding and putting out radials all has been clean.

Hope to hear the T3 on 1945kHz.

73

This is a victory for all of us who collect both radios and firearms and various other bits of mil equipment. There is, however a caveat here....we can't relax one bit.
This particular bill will be re-introduced each year (It is the Defense Appropriations Bill)..so Each year we must go after each of our Senators and Reps to keep this stuff from creeping in unnoticed.
What is particularly scary is that this same language was in last year's bill, and was also killed off by observant and quick reactions of those who would not only protect the constitution, but our own personal collections. This year, it was overshadowed by the overwhelming tragedy of 9/11, and if not for everyone's vigilance, may have squeaked through.
Regardless of how bad the times are, or how much of an enemy faces us, we must be looking inward at the same time to prevent any usurpation of rights by those who have managed to be elected to public office simply to carry out their own agenda, and not that of the people who elected them.
Well Done ! Everyone...onward to next year's battle of the bills ;-)

Tom,

Just catching up on some really old e/mail and getting back to the T-3 lists...noted your comments about your inverted L...wonder how long it is for 160 and how you feed it...i.e. matching network?

Have half wave dipole for 160 up and running, but feeding with 600 ohm feeders, so no ham type matcher big enough to handle the T-3 ... Building one, that is in the early proto type stage with hole drilling and bolts and such...but, wondering about your "L" and the matching network...

73, and the T-3 group info is excellent...

From: k1khpjohn
Topic: 1121  Message: 1121

Because of the high noise level, operating AM with a conventional antenna has been difficult and unpleasant.I was often forced to operate "the other mode". I finally found the perfect solution. I built a shielded loop using copper pipe,wire,and hardware purchased from Home Depot. It's a tuned loop 10 ft. in circumference. I use it with a JPS ANC4 noise blanker. Sense antenna is an 8 ft. whip.By rotating the antenna for minimum noise and adjusting the noise blanker I can eliminate 99%of the noise.In addition I use a Timewave digital audio processor which can be used for additional noise limiting and hetrodyne reduction. Alse it has a very effective line noise filter.

Hello

I am a new member of the group.

I'm seeking for my BC-610-E the box BX-34-B with crystals FT-171-B or the crystals without this box, or with an other box ...

I'm seeking also a knob for selecting one tuner unit.

73.

From: redmenaced
Topic: 1134  Message: 1134

I didn't get much response to this so I won't call a net.

BUT, I will be on tonight and we can see what kind of damage we can do.

So, if you don't have anything better to do warm up the radios!

Joe

# 1135. For the T-3 registry:

Yahoo group: T-368_BC-610
Date: 2002-01-01 07:31:00 UTC
From: redmenaced
Topic: 1135  Message: 1135

Had a great QSO with WA9ZTY in Wisconsin, he was running 30 watts from an Elmac AF67. YES, even with all the noise on the band last night I heard him very well in Western NYS!! That was an accomplishment on his part.

Well, it seems Rob, WA9ZTY was an Air Force Radio Technician and has some small knowledge of T-368's AND BC-610's. He worked on them for years! Even has one of his own.

Now here is the interesting part:

Its a Crosley T-368C With a military modified Speech Amp labeled AFRS. It also has a Modulation Transformer labeled 20 to 20KHz.

But no mention of RF deck mods.

Gonna have to get more information from him on this one.

Unfortunately he says he's long ago gotten rid of his stash of tech orders and other pertinent paperwork and has no recollection of the differences between the "F" and "E" models.

So, Steve, could you enter this one into the T-3 registry and make note of its military modifications, please?

Too noisey for a real net last night.

Happy New Year everyone,

Joe

Hi Joe,

Just a short one to wish you and all a great new year to come...gotta keep this short and get off line while my wife is out and about with the car...but, goin' to try an work on the 160/80 turner this afternoon and evening...will post details if I have any luck with it...strange to search for details in the lit, and find it so scattered when it comes to real homebrew for such an old subject...

Best to All,

Gene

# 1140. T-368 speech amps

Yahoo group: T-368_BC-610
Date: 2002-01-02 21:37:51 UTC
From: Tom Mackie
Topic: 1140  Message: 1140

Hi All,

I now have a spare stripped speech amp chassis for my T3 (I still run the stock one). I have looked over most of the mods having to do with removing the filters, clipper etc but for the most part that interstage transformer has to go...

I'm looking for other ideas and schematics for what else you have successfully built up. A push-pull setup with a more beefy transformer would allow smoother swing of those 4-125's.
Have any of you built anything up? I hear some guys have used pp 6BQ5's but I have not seen a schematic.

A lot have have suggested using an external hifi amp with a bassakwards transformer driving the grids but I want to keep everything inside the rig for plug and play use.

Thanks

Tom

Tom & Group -

I used an old RCA commercial circuit, from the 30's that was made popular by another ham for use with a lot of modern modulators. Right now I cannot remember the call of the ham that made it popular nor the one that steered me to it. In either case it uses a pair of 2E26s, but I am sure a variety of tubes will work. It does require the use of an input transformer with dual secondaries for the feedback circuit. The output is RC coupled to the grids of the 4-125s and the feedback comes from the plates of the 4-125s back to the secondaries of the input transformer. I have always had excellent reports with it. The way I implemented it physically, was to strip my original speech amp, and then cut off the top of the chassis. I then used a bare piece of aluminum to build the circuitry on, to the extent that I even used the original speech amp connector. When done, I aluminum soldered the plate to the top of the topless speech amp. chassis. I used a large piece of Teflon, mounted vertically, on the 4-125 side of the speech amp. chassis, to mount the RC voltage divider for the feedback network. When done the assembly simply goes where the original was with no problem, using the original connector. I still have the schematic of it somewhere. If you would like to build it I would be happy to send you the schematic. Also, if interested I could take digital photos of the my speech amp. I used this speech amp., within my T-368, for the past 12 years. 73 & HNY - Mike

Hello Gang!

I have a newly acquired T3 and need some knobs, which are damaged. I specifically need the following:

SERVICE SELECTOR KNOB
EXCITATION METER KNOB
MODULATOR BIAS KNOB
(2) CARBON GAIN KNOBS (One for a friend)

Would really appreciate your help or the name of a source that may have these.

73,
Ed NI6S

Page 926 of the Allied catalog shows a selection from
the EHC Company that matches the original T-368 knobs.
Their webpage has more and has the ones that fit the
measurements you need.

CAUTION!!!

Do NOT look up the going price of the crank knobs!!

http://www.ehcknobs.com/selector.html

Hit the "military" selection, you'll need Adobe
acrobat reader. I can't remember where the pricing
sheet is but its there somewhere.

Happy Hunting,

Joe

No, not mine, I don't even have one!

Contact Norm as listed below.

I have a bc610h SN 836. There is also a BC614e sn2667
Both look in fair to good shape as far as the cabinet and components look. They have not been fired up since 1968. At that time is used it for CW while I was in Germany. I looked around the basement, and there seems to be very little mosture, so I was surprised I didn't see any rust.

I'm looking for a buyer, or an idea of the value.
The equipment is in Middle Tennessee.

Thanks in advance for any assistance.
Daytime phone 800-554-5686 ask for Norm.

# 1152. T-368 REPLACEMENT KNOBS AVAILABLE!

Yahoo group: T-368_BC-610
Date: 2002-01-14 22:12:23 UTC
From: aidehua@aol.com
Topic: 1152  Message: 1152

Just placed an order for some T3 knobs from Newark Electronics. They have a good stock on most. Here's the data on the ones I ordered:

Electronic Hardware Corporation (EHC)
Style: MS91528 (Matte Black)

(1/4" shaft)

--4F2B (PA BAND SWITCH)
--3F2B (SERVICE SELECTOR SWITCH)
--1F2B (CARBON MIC KNOB)

These are direct replacements for the ones that came off the T3. Even the part numbers are the same, though mine were originally made by Raytheon. Let me know if I can be of help!

73,
Ed NI6S

PS: How do I "register" my new T3?? I'd like to be included in this elite group!

+++++++
Hi Ed,

Well done on finding a source of the correct knobs,
how were the prices? Did they have the crank knobs
available?

In order to be placed into the registry all you have
to do is post the information on the front tag of the
T-3 and Steve will add it to the registry.

# 1156. HV Plate Meter mod help

Yahoo group: T-368_BC-610
Date: 2002-01-17 04:12:30 UTC
From: kd2nx@att.net
Topic: 1156  Message: 1156

Does anyone have any idea on how to do the same
modification on the BC-610 as on the T-368 to isolate
the PA Plate Current meter from the HV running through
it and use cathode-current reading instead? I see that
the '610 uses something similar for the Modulator
Current by installing a meter in the BC-614, through an
interconnect cable, to the center-tap on the modulator
filament transformer. There is also a 200 ohm resistor
to ground from the center-tap as well in case the
Modulator Current meter opens. Can I use the same scheme
with the PA Plate Current meter, or do any of you have
other thoughts?

Thanks,

Steve, KD2NX

# 1157. Re: [T-368_BC-610] HV Plate Meter mod help

Yahoo group: T-368_BC-610
Date: 2002-01-17 06:39:04 UTC
From: James M. Walker
Topic: 1156  Message: 1157

Yes,
DON'T change it. I have 3 BC-610 transmitters operating and on the air and a
T-368 all original and un-modified. The HV meter is and has been just fine in
all
the BC-610 rigs and is A-ok in the T-368. The meter is recessed from the
front
panel for safety and the plate current meter is still the best way to monitor
operation when tuning up. On the air I watch the meter for movement in the
negative direction
as an indication I might be driving the rig to hard in AM mode. I also check
Mod
current so I know generally where the Mod current meter is in the distorted
audio
realm. I decided that the safety precautions were adequate for "NORMAL" use
of the rigs. The only time I hear bad things about these rigs is when they
have been
modified to increase Modulation percentage beyond normal, or the RF deck is
modified to make it become something it wasn't designed for. If it works I
don't
"fix" it.

From: James M. Walker
Topic: 1156  Message: 1158

Sorry for the double post,
BUT also be very careful with the BC-614 I have read
about people making mods to them and connecting the meter circuit to measure
cathode current. There are various flavors of the BC-614 and some DO NOT
measure the cathode current they measure the audio out
of the bc-614 ala "VU meter" operation. There is even a variety that has
control circuitry to key the transmitter from the front panel of the BC-614.
Beware the interconnect is vastly different and if wired wrong it will
definitely "LET THE SMOKE" out of a lot of had to get components.

James and Rolynn, thanks for helping me leave well enough alone! The only reason I was curious about this mod was because my HT-4H needs to be brought back to life after 30 years of being dormant, and this would be a good time to make any changes, if they were worthwhile.

Thanks Again!

From: kd2nx@att.net
Topic: 1160  Message: 1160

Hello James,

According to my manual, my HT-4H is an equivalent to a BC-610G, which is the postwar version of the '610. My HT-4H has a date of August, 1952 on it. By the way, I have a couple of 160m coils that are in pretty rough shape, the lucite strips are crumbling away. George Morton, N7HR told me that a modification to the 2-2.5 MC tuning unit is to put a fixed 100pf capacitor across each of the variable caps to bring it down to 160. I have a couple of those, so I'll give it a try eventually. I just wished that I had more time to get moving with this monster! At one point, I had even considered selling it, as I hate to see it sitting dormant the way it is.

You'll have to fill me in on your "non-evasive" procedure to move the BC-610 between 160m and 80-20m. I have a regular BC-610 manual here as well that I use for reference purposes.

From: k1khpjohn
Topic: 1161  Message: 1161

Come on fellows, set that alarm clock for Sat. 0500 eastern and warm up those strapping T3's and BC-610's. Band conditions have been great. Yesterday W7QHO {DENNIS} checked in from Cal. with his T-368. His signal was Q5. I usually can copy most stations here in SW Florida. Net Control Station is W3PWW, Hanover,PA. This is a great net for anyone interested in military radios and some of us {like myself}are military vehicle owners also. See you soon, JOHN

Hello all. I am looking to buy a T-368 or BC-610 for pick up in the ND, SD, MN area. I would prefer a unit in good working condx with few mods. Cosmetics not too important.

Thanks, Ron Skipper W8ACR

# 1164. copper couplings on capaciors

Hi All T368 fans.

The copper bellows couplings linking my cranks to the vacume variables are split and will soon fail. Do any of you have a source for new ones? Is there a better solution? I replaced them many years ago but they have failed again and only see limited use.

Thanks

Tom

Tom,

I did a search on Yahoo for "bellows coupling" as
that's evidently the trade name for them. I got back
more manufacturers and dealers than I can wade
through.

Any chance you'd have the dimensions and a
manufacturer's name or P/N?

Joe

From: f6fed
Topic: 1167  Message: 1167

Hello

There is the TM 11-281 for SCR 399-A and SCR 499-4. The SCR 299 is not on the same Manuel.

What is the difference between SCR 299 and the two others ?

Thanks.

Henri-Paul F6FED

# 1168. Re: [T-368_BC-610] SCR-299

Yahoo group: T-368_BC-610

From: dharlan
Topic: 1167  Message: 1168

Hello,

The SCR-299 used BC-610-b,c,d with all the equipment mounted
on a table designed to fit in a chevy panel delivery truck. K-51 ?
Also all the audio control and field phone switching was incorporated
in the old style speech amps and table MC-269. The SCR-299 was equipped
and intended for operation up to 8 mcy. There was also a little piece
of junk antenna tuner that went with the 610.

With the procurement of the BC-610-E and later models, the SCR-299
now became the SCR-399 where all the audio switching in the speech amp
and
that stupid table went into the JB-70. The RX's were mounted into
chests
CH-120 and CH-121 and the whole mess was installed in a Shelter. The
BC-610
got a new B&W tuner and was equipped for operation to 18 mcy. The
shelter was placed on the back of 6X6 2 1/2 ton truck (maybe that was
the
K51), the SCR-499 was basically an SCR-399 without the Truck. All models
used the PE-95 generator that was tailored behind the truck.

The manuals that you refer to are wonderful sources of info
that show how the equipment was used in a radio SYSTEM rather than
the stand alone units most of use them as.

Hope this helps

Hey Guys,

I just put my web page back up. Has pix of both the SCR-299
operators table and the SCR-399/499 main chest CH-120 as well as
my own 610-E.

# 1175. OLD MILITARY RADIO NET

Yahoo group: T-368_BC-610
Date: 2002-02-12 01:38:14 UTC
From: k1khpjohn
Topic: 1161  Message: 1175

Last Sat. morning we had a great net. Several stations were operating BC-610 and T-368 transmitters. There's always room for more.

# 1176. Finally, the T 368 is Playing in the Normal mode, with no flashover.

Yahoo group: T-368_BC-610
Date: 2002-02-12 03:56:31 UTC
From: Joe Munson
Topic: 1176  Message: 1176

Group,

I finally got my T 368/C running in the Normal or full power mode. I have been running it in the tune mode for a couple of month, getting on the Olde Tyme Military Radio Net on Saturday Mornings, and the Heathkit DX 60 Net on Sundays. Last Sunday a week ago, after the DX 60 Net, tore into it and fixed the problem, in the area of the Blocking Caps in the Plate Circuit. Used a dremal tool, ground out the burnt grove in the bakelite/Phenolic, and filled it with bright red epxoy like stuff, HV Insulation Material.

Now for some questons to the Group.

I notice while runing it, I used it that day with the back off, that the 4D21 plates glow a dull orange. Is that Normal? Mine is stock, audio, etc, and some say the audio is tinney, no lows, but punches through. I am using a D 104 mic on the 600 ohm line input. Seems to be little difference on the recieve end even when using the Carbon Mic, high pitched, no lows. I chatted around on 80M Sunday, and talked to a few fellows with T 368's and for the most part, they sounded like Broadcast Transmitters. One of the 4D21 tubes has a blue glow to it, but seems to work OK. I am also getting lots of flash around the contacts on the Plate relay when Push to Talk is pushed.
Any idea to maybe cleaning/burnishing them. Looks like they need more than contact cleaner.

I have a Flat Top Zepp type antenna, 250 feet long, center fed with open wire ladder line. I also have a 80M Dipole. I am using the T 368 only on the Dipole so far. If you have any info on Balanced tuner Specs that will handle this beast for the Freq Coverage, 160, 80, 40, 20, etc, so I can use the Zepp, Maybe you could let me know where to find it.

Thanks,

Joe Munson

Topic: 1178  Message: 1178

Joe,

Congrats on getting the T-3 running "normal" again. It sounds like you are going through what I had gone through in December and January.

I ended up making a few easy mods that really woke the T3 up.

First, I had a bunch of flashovers so I re-wired the plate current meter to read cathode current. I was worried about blowing the thing up.

Next I removed B+ from the entire tank circuit. I installed a new plate choke (big), 500pf bypass and 500pf 6kv capacitor on the back of the chassis near the 4-400. I reconfigured the tank to be a standard Pi-L. In the process I also removed the big 3900pf cap that was in between the pi and L. This mod went very smoothly once I gathered all the parts together and I would be glad to step you through it if you ever want to do it.
The result is that I no longer have flashovers, I can tune 80meters with a real dip (never did that before) and my audio now allowed highs to pass eliminating that muddy sound.
None of this is new stuff. I just followed ideas that others have written about in the past.

Next I made a few mods to the speech amp. I bypassed the clipper and changed the coupling and bypass caps as well as the negative feedback cap. I took the carbon mike power off the front panel connector and rigged up a connector so I can run a D-104 right in the front. I used an amplified D-104 which has a crappy amp in the base but it was handy. Old buzzard John, K1KHP supplied me with his ideas and his T3 sounds nice. First tests were very dissappointing. All highs and no lows. I dont know if anyone ran across this before but I solved that problem of a high-peak with a high rolloff. Its a simple capacitor and resistor shaping circuit. Now it sounds quite good. I have been getting a bunch of nice reports from the hi-fi guys.

All mods are reversible so the intrinsic military way-cool factor is still there.

My 4D21 glow orange on key-down. No problem.

Hope to hear you on Saturday morning!

Subject: [T-368_BC-610] Finally, the T 368 is Playing in the Normal mode, with no flashover.

Group,

I finally got my T 368/C running in the Normal or full power mode. I have been running it in the tune mode for a couple of month, getting on the Olde Tyme Military Radio Net on Saturday Mornings, and the Heathkit DX 60 Net on Sundays. Last Sunday a week ago, after the DX 60 Net, tore into it and fixed the problem, in the area of the Blocking Caps in the Plate Circuit. Used a dremal tool, ground out the burnt grove in the bakelite/Phenolic, and filled it with bright red epxoy like stuff, HV Insulation Material.

Now for some questons to the Group.

I notice while runing it, I used it that day with the back off, that the 4D21 plates glow a dull orange. Is that Normal? Mine is stock, audio, etc, and some say the audio is tinney, no lows, but punches through. I am using a D 104 mic on the 600 ohm line input. Seems to be little difference on the recieve end even when using the Carbon Mic, high pitched, no lows. I chatted around on 80M Sunday, and talked to a few fellows with T 368's and for the most part, they sounded like Broadcast Transmitters. One of the 4D21 tubes has a blue glow to it, but seems to work OK. I am also getting lots of flash around the contacts on the Plate relay when Push to Talk is pushed.
Any idea to maybe cleaning/burnishing them. Looks like they need more than contact cleaner.

I have a Flat Top Zepp type antenna, 250 feet long, center fed with open wire ladder line. I also have a 80M Dipole. I am using the T 368 only on the Dipole so far. If you have any info on Balanced tuner Specs that will handle this beast for the Freq Coverage, 160, 80, 40, 20, etc, so I can use the Zepp, Maybe you could let me know where to find it.

Thanks,

Joe Munson

I have a TRW T-368-F. Dennis W7QHO and I were trying to load the rig. His T-368C puts out 75-100W in the TUNE mode, with an output of about 400-500w. My "F" puts out about 25w in the TUNE mode. Is this difference to be expected in an "F" vs "C" or have I encountered a problem??

Please help. Trying to get this sucker on the air!

I dont know if there is a difference but...

My "F" at 200ma puts out 400W in NORMAL and 50W in tune (about 75-100ma).

Current values are guesses because my meter is re-wired to reade Cathode current.

Let us know what you think.

Hi Joe,

Interesting notes on ur T-368...I have not been on yet with mine, although I'm getting closer...part of my delay is to build a balanced wire tuner heavy enough to handle the T-3...

Hope to have it done within the next week or two...but it is a brute with the idea of handling potential high voltages along the bal line...I have no idea of how long my feeder is...don't care...cause will tune the whole system...hence the potential for very high voltages depending on where the current and voltage nodes/peaks are.

I'm presently using a wimpy little MFJ claimed to handle 3kw...(yea) and maybe 1.5 kw on peaks...(last guy I chatted with caught one on fire with his T-3 on 160...I'm on 160 with an Omni six plus on ssb for experimental work on 160...but no high power am yet...darn...so the antenna works fine, but no way to get real power to it 'til the tuner is done...

So the building project..using an old broadcast coil and some big caps...hope to send pix to ER in near future...and have it in test mode within the next week or so...

For a basic ref check Barry Wiseman's ER recent issues...for excellent discussions and how to for bal tuner...I'm also making my own open wire feeders...so easy I'm wondering why everyone doesn't use it....600 ohms usually and going to assemble some more for a 20 meter 8JK soon as wx clears...

My comments aren't too specific but keep going with the bal tuner...it's the only real way to get all the rf in the air...T-3 project here is a long time waiting...and really frustrated with the time available to get it on the air...but antennas are up for 160 and separate for 75, with tower up, and 8JK on the boards...plus the T-3 switching and mute system now completes...whew...so much time and so little to do....8>(....

All.

In working with Ed on his recently acquired T-368 we ran into some meter and power readings that didn't jibe with my previous experience on these rigs. Specifically, the maximum output that could be achieved in the "tune" mode was only 25 watts at about 60ma plate current. Increasing the plate loading only DECREASED the output. In the "run" mode the output was only 250 watts at 200ma plate current and loading the PA up to 300 ma only provided approximately 350 watts out. In my experience these rigs typically put 60 - 80 watts out in "tune" and 350 - 400 W out in "run" at 200 ma. Subsequent checking revealed very poor line voltage regulation in Ed's garage where we were doing the work with only 100 VAC measured at the T3's power plug under load!

I ran my T368C at 100 volts in during portable operations a couple of years ago. Worked plenty of people with good reports but had made no measurements so decided to do so now. The results are listed below for the edification of group members.

Test: B&W T368 "Basic" with 4-400 PA of unknown history that came with the rig. ME-165 Power Meter. In all tests the filament voltage was adjusted to correct value. Didn't measure the PA plate voltage.

Line Voltage Power Out Plate current
--------------- ------------ -----------------
122 vac 350 W 200ma (Normal condx
at W7QHO)
115 325 190ma (Loading not changed from
above)
110 290 180ma "
100 225 160ma "

In the "Tune" mode:
----------
122 vac 60 W 90ma (Loading same as above)
115 50 80ma (Loading not changed)
110 35 70ma "
100 25 55ma
"

At the last value, attempts to increase the loading resulted in a decrease in output as observed with Ed's rig.

With PA Loaded to 200ma at all input voltage values:
---
122 vac 350 W out
115 320
110 300
100 250

So, ED"s RF section seems to be behaving normally. We'll go after the modulator next and another T368 should be on the air soon.

It might be a god time to look somewhere else first.

Go to the breaker panel and check the voltage there
while the transmitter is under load. If you still
read 100 volts at the breaker check at the main lugs.

Somewhere you should read full voltage, if you dont'
then something is loose and/or needs attention before
you burn the house down!

Many house services never see a full load so this
problem often goes unnoticed until it becomes a BIG
problem.

The problem MIGHT be that there is a connection that
isn't capable of passing enough current to keep the
voltage up to full, whatever that is at his house.

It might be in the meter socket, especially if its
aluminum wiring and has been in service for many years
of hot/cold cycling.

The basic model should be able to run on a 20 amp
circuit but any later models should have 30 amp
circuits.

Well, of course Ed will have to install a circuit to his shack heavy enough to run the thing. The purpose of the message was to pass along some data on normal T368 response to various input voltages.

Topic: 1188  Message: 1188

WARNING; WE HAVE A SERIOUS THREAT TO OUR HOBBY!!! City and local government is sweeping the country with antenna restrictions. When I built my house I planned my antenna system and installed my tower bases. There were no restrictions. New regulations have destroyed my plans. I know this is becoming a common problem. If this continues we will limit ourselves mobile or compromise antennas. LETS FIGHT THESE BUREAUCRATIC COMMICRATS..

Maybe soon I'll get my faster computer to work right but until then I'm using this old 66 MHz slug.

Until then look at what/who I found on the AM Window BBS:

# 1190. Broadcast & Military Night (for those who missed it elsewhere)

Yahoo group: T-368_BC-610
Date: 2002-03-17 19:30:12 UTC
From: W2ZR@aol.com
Topic: 1190  Message: 1190

This Wednesday March 20th the CCA will be sponsoring a broadcast and
military equipment AM night on 3880kcs.

We will be looking for: ART-13, 20v's, 300J's, Gates, Rca's, BC610's etc.
If you don't have a broadcast or military transmitter join us anyway!

REMEMBER you DO NOT have to be running Collins gear to check in.
Everything is welcome!

Each ncs will start at 08:00pm in their time zone.

We will have 4 main ncs. One on the East coast, Midwest, Mountain area,
and West coast. The main ncs will have others in their area helping with
their hour. (Please note ONE HOUR). At the end of their hour the main ncs
for that region will contact the next regions ncs and turn ncs over to them
etc.
etc. etc.

Starting at 8:00pm EST (01:00 UTC) East Coast ncs will start the net
At 02:00 UTC East coast ncs will turn ncs to Midwest ncs
At 03:00 UTC Midwest ncs will turn ncs to Mountain ncs
At 04:00 UTC Mountain ncs will turn ncs to West coast ncs

comments please to wa9vrh@...

Visit our website at www.collinsradio.org for more information on AM
activities.

Have fun and enjoy the great sounding AM signals. 73's Larry WA9VRH

Sponsored by the Collins Collectors Association http://www.collinsradio.org
Nets: Tues: 3.805 Mc-2000 Central / Thur: 3.875 Mc-2000 Central
Fri: 3.895 Mc-2000 Pacific / Sun: 14.263 Mc-2000 UTC
1st Wed (of the month) AM Net 3.880 Mc-2000 local (ET, CT, MT, PT)
Sun AM Net: 29.050 Mc-1200 Central

Item #1339916133

Kinda sad looking and missing some parts but it looks like it could be a runner with some work.

Missing: Tuning cap, 4-400, plate cap from one of the 4-125's.

Problems noted: This thing looks ugly! Needs paint. There's a problem with the tuning of the exciter module, the mask doesn't matck the knobe placement. The meters may not be correct but I'm not sure.

It has the shock mount!

# 1195. T-368 VFO Module

Yahoo group: T-368_BC-610
Date: 2002-03-20 23:40:58 UTC
From: W6PSS@aol.com
Topic: 1195  Message: 1195

Greetings Club Members,
My name is David, call W6PSS and I love AM. I am delighted and humbled to be numbered now among you. I was prompted to join, perhaps as some of you - I needed help.
The problem hr is wid alignment of the T-368 VFO unit that I use for all my AM rigs.
Recently the set screw for the top cam collar became loose. On inspection I noted that gear system needed cleaning. After cleaning and lubrication I attempted to reassemble unit but in the process I totally messed up the mechanical alignment
RF alignment of the unit. Can any of you help me please? Thanks!
I don't own a T-368 transmitter, only the VFO.
About BC-610's - my love affair with them goes back to 1953 where I operated one at the club station KG6AAY at the Naval Communications Station on Guam Call NPN. Then a year later at KG6GX another opportunity where I operated another E-Model. I have owned my I model since 1962.
Any help on 368vfo appreciated.
david

George,

Solved the chimney problem with a 'Colman' lantern replacement chimney from Walmart...tried one then found the 'largest one is a near perfect match fit...occasionally find a chimney at the Fests, but none big enough for the 4-400 as yet...no need the Colman works fine...

I read this list often but get bogged down for time so don't send much stuff...still great list and great to stay in touch with Joe and the "T-3" Gang.

From: redmenaced
Topic: 1199  Message: 1199

There are 140 subscribers to this list as of today!

There's an exciter deck on E-bay to go with that rusty T-3 that's there.

Propagation conditions are great tonight, the West Coast Contact sessions should be successful again.

So far I've worked Washington, Oregon, California, Arizona (Hi, Lock), Utah, Wisconsin, and Minnesota. With a rudimentary antenna at 35 feet!

I missed the Collins Military Net on Wednesday night,..... oh well, so did lots of other military equipment owners.

Last time I had my T-3 on the air the overload tripped out, nothing found except a small spider web and spider legs on the mod deck,... time to clean! Not sure that's what caused it but its a good place to start.

"Someone" says there are only two BC-610's on the East Coast? Hmm,..... maybe there are only two that get USED! Surely that can be fixed.

73

I don't know if that number is correct, as I currently have three all on the air at various times and a T-368. I think they are not listening or maybe need better receivers.

currently on 40 7290 AM with BC-610 and later tonite on 3870 AM with BC-610!

# 1201. Trade: HT-4H/HT-5G for GK-500A/C

Yahoo group: T-368_BC-610
Date: 2002-03-24 17:58:02 UTC
From: kd2nx@att.net
Topic: 1201  Message: 1201

Greetings!

Would anyone be interested in trading my Hallicrafters HT-4H/HT-5G TX/Speech Amp for a WRL Globe King 500 A or C model? It's complete, but needs to be restored to it's previous luster. This is a civilian version of a late-model BC-610. I just don't have the time to restore this beast. A Globe King would be easier to handle with the lack of time that I have. I have spare tubes, tuning units and tank coils. Heavy-duty casters have been added already.

Any possibilities? I'm testing the waters here. I would like to have a G.K. that works and is in decent condition. I may be contacted via my e-mail below.

Thanks and 73's,

Steve Davis, KD2NX
Middletown, New Jersey

Hi Joe,

Just checked rf current in both legs of dipole for 160 using my new homebrew parallel tuned tank for the T-3. RF balance looks great! Now if I can just get the T-3 tubed up...will be ready for some testing in a week
or two on 160, just in time to miss the winter season 8>(

Hi Phil,

Actually, I realize the value of the Globe Kings... They
are DEFINATELY worth more than their '610 counter-parts.
I thought I'd see what was available, even if I had to
add some cash to do the deal.

Thanks for your input!

73,

Steve

Hello,

I'm seeking after Manuals for installation of AN/ARC-8 (ART-13 and BC-348 or AN/ARR-11) on aicrafts and pictures on these complete unit.

I have US Air Force's Handbook Maintenance Instructions AN 08-30 ART13-5 and AN 08-10 209 (BC-348), but nothing on the subject.

I'm seeking too mountings with plug PL/P or Q-103 for BC-348 and DY-12 dynamotor's mounting.

I'm seeking too C-87/ART-13 pilot's control unit.

Many Thanks for help and 73.

Groups,

This morning, I finished scanning and cleaning up TM 11-809-35, the depot maintenance manual on the T-368 through T-368-E. Reprints are $36.00 plus shipping. Manual includes all pages, including printed covers and Changes 1,2,3 & 5. Foldouts are one piece. Photos are clear (except for rear view of ME-165 which came from someone else). Binding is screwpost.

Also have one extra original of TM 11-809-35 (Changes will have to be reprints) at same price and several extra originals of TM 11-809-10, the operator's manual, @ $15.90 (Changes will be reprints).

I have TM 11-809-20 and the tuning summary cards for the T-368 and TN-339 but have not scanned them.

# 1212. Radio operators handbook for various aircrafts.

Yahoo group: T-368_BC-610
Date: 2002-04-11 07:53:30 UTC
From: f6fed
Topic: 1212  Message: 1212

Groups,

I am needing radio operators handbooks with all the radio gear with, if possible, real photographs in the aircraft, schematics and accessories.

I am interested in AN/ARC-8, SCR-177,SCR-185,SCR-187,SCR-287...

For example I am needing "Service and instruction Manual Radio B-24-D Airplane" with BC-375,BC-348,BC-433 ...

Many thanks. For USA payment by WU.

73.

Henri-Paul F6FED

Things to watch out for with this item: The speech amp must be the correct type for the BC-610E!! Some speech amps have a VU meter across the drive lines to the transmitter proper. While some of the early model E type transmitters used this feature, if that is the case, check wiring schematics to be sure as the BC-614 later models carry the cathode current of the 100THs' to ground. The transmitter has been modified per the screening and plates covering the vents, check for over heated components etc, It doesn't mention tubes and the like tubes are available in various forms, but if you consider getting all new or NOS tubes be prepared to pay high costs 600.00 to 800.00 for the set (xmtr) around 100.00 for the speech amp. It looks like a great restore project but could turn into a high cost project as well. Shipping is always a problem and this one is in California. Go for it, if you need help in the restore send me some E-mail. Jim WB2FCN chejmw@... # 1220. T-368-C for sale

Yahoo group: T-368_BC-610
Date: 2002-04-12 16:58:08 UTC
From: Thomas B Smith
Topic: 1213  Message: 1220

While we are in the military equipment for sale mode, I still have a nice working T-368-C for sale. It is located in the northwest Louisiana area but can be trucked (within reason) in the area or brought back to my home in the Houston area.

It's all original with the exception of some of the reversable audio mods found in "Electric Radio". It is a very clean transmitter. It is mounted on heavy duty casters to help in transport. I have manuals and documentation on the "ER" audio mods. I also have available tube spares (including the 6000) and a extra exciter unit that will be sold as seperate items.

Price is best offer over $1200. I have jpegs available. Please email if interested.

Thanks,
Tom N5AMA

From: Gerald Froehlich
Topic: 1229  Message: 1229

Hope we are working ! My line voltage is 123 volts, Other then the heater voltage is there any other problems that might happen ? also If I got this right I think I need to add a jumper to the JB-70 connector to enable PTT from the 614-H, and has anybody got a better idea for the load control , I use only dipoles cut to operating freq. jerry/KR4BR

I needed to buy some hollow rivet clinchers from McMaster, so I ordered one
of the twist lock connectors. What they have are the Daniel Woodhead
connectors, which are soft on the outside. It is a little tight getting
into and out of the original BC-610-E chassis AC connector (if you are
holding the chassis connector in one hand) but with the connector firmly
anchored by a BC-610, should be no problem at all. :-) But the cheaper
rigid plastic ones like most hardware stores carry are too large, and won't
squeeze into the recessed housing.

Hi, First I want to thank Joe for putting me on the list and everyone who has helped myself. I think if I got this right (using a BC-614-H) Grounding pin 2 on the SO5 starts the exciter only, and connecting pins 3 and 4 on the SO5 puts everything in transmit ? I have not the foggyest idea whats in a JB-70 but i think if i install a relay in my 614H operated by the mike button that should give me PTT. I can.t see any reason to switch on the exciter from the remote position( unless to 0 beat or check Freq. with a counter) Hallicrafters BC-610-E serial 334 order # 25781-phila-44-07 and Hallicrafters BC-614-H serial 699 order # 21418-phila-50-7-C

# 1233. Russian equivalent of T-368

Yahoo group: T-368_BC-610
Date: 2002-04-20 22:14:49 UTC
From: WF2U
Topic: 1228  Message: 1233

Hello Group,

Just for kicks - here is the Russian equivalent of the T-368 or maybe its big cousin:

It's called the R-102,
Frequency range: 1-12MHz; Output power 900W; very high frequency stability with thermostat control, modes of operation A1, F1, F1/F6, A3; integrated antenna tuner; Power supply requires 3 phase 380V or 220V; Dimensions approximately 6' H x 3' 4" W x 4' 4" D ; weight approximately 1100 lbs; picture can be seen at http://www.rz.unibw-muenchen.de/~j9sc0703/Sender_R-102_komplett_a.JPG .
BTW, it's for sale in Germany, for 1250 Euro... ($1112).
Anyone feels adventurous? (1 ton can be shipped by ocean freight for around $500.....)

One of the locals reports that last year he worked on a R-102 while on assignment in eastern Europe. He said they are very well built and that he'd love to have one if the shipping charges weren't too high. Of course the killer for most of us is the AC power input requirements.

Meir thanks for bringing the R-102 to our attention.

From: redmenaced
Topic: 1236  Message: 1236

Hi list,

I've just added a bunch of photos of T-3 peripheral equipment to the album at the homepage of this list.

There are photos of the TN-339 Antenna Tuner, the ME-165 Power/Wattmeter, and the remote control panel which I will add the proper number to later.

I also signed up several new members to this list over the last two days, if you want to include your transmitter in the T-368 registry or the BC-610 registry pliease include your name, call sign, manufacturer of the rig, S/N, Contract number, and model. I don't keep the registries so don't send it to me.

That's 150 people on the list now.

Joe KG2CI

Hi list,

I just posted photos of peripheral equipment for the T-368 at the homepage of this list.

There is the TN-339 Antenna Tuner, the ME-165 Power/Wattmeter, the remote control box for the T-368 and R-390 receivers which I will put the proper number on later.

I have just signed up several more people to the list if anyone wants to include their transmitter in either the T-368 Registry, the BC-610 Registry, or the new HT-4 Registry, please include the transmitter manufacturer's name, the Serial Number, the contract number, and the model number. Also, include your name and call sign.

That's 150 members on the list now.

Greetings to all,

This is my first attempt to post to this reflector. I have, extra to my needs, a T-368 still in the wooden crate. This unit is one of three that was saved from the lake at Dallas Naval Air Station by Robert Downs a few years back. If it is like its sister tat I have regularly operated for several years, all it will need is a little cleaning. Actually, I have not opened the crate on this one and will not unless someone is seriously interested in it. I will be glad to deliver it anywhere near the highway from Houston to Dayton, Dayton to Manassas in mid May. Will also be going to Montana, Oregon, and California in July and can deliver it along that route.

I also have a few, fixed link, NIB 160 meter BC-610 coils. These coils are still wrapped up in the original packing. I will not guarantee then unless the buyer allows me to open the packages to inspect. The reason I say this that about half of the buyers have requested that I not open the boxes.

Also have an "I", "F", and "E" model available in conditions something less that the one in the crate.

# 1241. tremendous responce

Yahoo group: T-368_BC-610
Date: 2002-04-24 23:46:00 UTC
From: k5jv
Topic: 1241  Message: 1241

Greetings to all,

Wow!!! I never dreamed that I would get such a tremendous response, especially in such a short time. Even though I may be all night at it, I will answer each inquiry individually.

The two T-368's are already gone, there is one T-213 (GRC-26) and a BC-610 "I" and "E" remaining. There are also a few BC-939's remaining.

I will go to the storage unit and see exactly how many of the NIB 160 Meter, fixed link tank coils remain. I found an unopened case of them at Fair Radio Sales about three years ago. Most of them sold by Mobile Ham Radio on my trip home.

I am looking for a BC-729 (SCR-299) antenna tuning unit and would consider trading some of the NIB160 meter tank coils for one.

From: k5jv
Topic: 1243  Message: 1243

Greetings to all,

I have eight 160 meter BC-610 tank coils remaining. Six of them are NOS in the original sealed boxes. One of them has the outer box opened, but the inner packing is still sealed. The last one is a NOS variable link coil with bad plastic deterioration. It is still wrapped in part of the original packing material. It is repairable if you are good with plastic and glue. The fixed link, NOS, coils are $100.00 each or $75.00 each if two or more are bought. The variable link unit with bad plastic deterioration is $50.00 or somewhat less is you buy a total of two or more coils.

# 1246. 160 meter BC-610 tank coils

Yahoo group: T-368_BC-610
Date: 2002-04-26 14:15:12 UTC
From: k5jv
Topic: 1246  Message: 1246

Greetings to all,

I think I have responded to all the mail about the tank coils and transmitters. If I missed you, please forgive me and try again.

I have only two NOS BC-610 fixed link tank coils remaining. I have opened the sealed boxes for inspection. These two coils have very slight plastic deterioration. Actually, a plastic stiffener inside the coil has come unglued. The coils will still perform perfectly whether this piece of plastic is re-glued, left as-is, or removed. These are the last two of these coils that I know of. I am lowering the price to $75.00 each because of this slight imperfection.

# 1247. T-368 Osc/Mult Info???

Date: 2002-04-26 17:22:01 UTC
From: storviken
Topic: 1247  Message: 1247

Just acquired (at Largo, Fla swapmeet) the oscillator-multiplier assembly from T-368 (B&W Model 15000). Plan is to use it as VFO for my Johnson Viking II-CDC for the WARC bands (the ones not covered by the old Johnson VFO). Need some help on the following:

1) Where can I get a schematic (and maybe pin voltages and resistances) for this unit. I guess the complete manual for the T-368 is available but that would be an overkill when I just need the oscillator/multiplier schematic.

2) What's the story on V-104 (type 6000) tube? Can't find it in my old tube manuals. Is there a direct replacement? Is there a source for these? Is there a substitute? Is it feasible to modify the socket to accept some other tube? It appears to be the PA for the assembly.

3) Will this unit have sufficient RF output to drive the Johnson Viking II? (feeding into the "VFO Input" connector)

4) Are the output frequencies the same as the dial frequencies? (i.e., are there additional multipliers in the other stages of the transmitter?). I will be needing an input (to the Viking) freq of 1.8 - about 6.5 mhz for the WARC bands.

Any assistance would be greatly appreciated. More than willing to pay for copying the schematic and any related voltage/resistance tables and postage.

My first question would be: "Why go to all of this silly trouble when you could just slap it into a T-368 and be done with it?"

Greetings to all,

Just a note say that the two T-368's and all of the 160 meters
BC-610 tank coils have gone. I still have one T-213/GRC-26 (BC-610F) in
original wooden shipping crate, one BC-610 "E" mode,. and one BC-610 "I"
model remaining. These items can be delivered to Dayton or on way to Dayton
and Manassas and back to Texas in Late May and early June, or, on between
Houston and Montana, Oregon, California, and back to Houston in July.

I took a look, the modulator deck has been denuded (Stripped). Looks like a portion of the RF deck (tuning unit area) also. No tubes at all on the "mod" deck, conjecture on the power supply as it is clipped in the area of the relays. Modulation transformer is also missing.
Humm, say around 150.00 for everything in the pictures and the cost of shipping, put it on a pallet ship forward air, around 60.00, I make it around 210.00 shipped anywhere in the continental USA.
A lot of refurb time, and parts scrounging time, Yes a major project.

<

Jim,

Well it's already over $300. Curious that the seller says that he has all of the tubes and that he doesn't mention that the modulator deck is partially stripped. The bias and exciter supplies seem to still be there, although home-made SS rectifiers appear to be plugged into the 5Z3 sockets. However, comparing the rear view photograph in the ad (which is seriously underexposed) with photos in the TM, I don't see anything missing from the RF deck.

My guess is that it is a BC-610-G, H or I (or T-213/GRC-26 made from one of those models), from the transformers. Which is too bad, as I have an F parts unit. Actually, the transformers from the F would work I think, but they are all round, not square like the later models.

On a related subject, there is also an O-39/TRA-7 exciter in another auction. I didn't go look at it, but although quite heavy, the O-39's make good companions to the BC-610 (for which they were built, of course).

Yes Robert,
I figured that also, the picture from the back is seriously lacking
in definition, I mentioned the rf deck as you can usually see the
brackets that hold the tuning units in place from that angle, and they
are not visible. WHat are you doing with your parts rig? I may have
a spare transformer (MOD) and also line in to PP 2A3 (driver), don't
remember if I have the 2A3 to 100TH grids transformer. However a real
serious project if you get the e-bay unit.

I bought a transmitter on E-bay where the seller said he had all the
tubes, after the auction ended I asked him to make sure the tubes were
packed carefully, he then chose to mention, they were NOT included
in the auction, just that he had them!!!

I make it an "H" or "I" model just dropped one off last weekend to a
friend, most of the "G" models had wrinkle finish not all. As for the
transformers, the mod deck transformers round or square will fit the
chassis the hole spacing is the same just the flanges on the round ones
line up and you need bolts not just washers and nuts to secure it to
the chassis.

I saw the O-39 listed, they did NOT have a picture posted, it is also
I believe listed as condition unknown. I have one for my E-model
which also has the Military Modification in it for 160, the transmitter
not the O-39.

I am always fascinated by the antics on E-bay!

# 1258. T-368 For Sale

Yahoo group: T-368_BC-610
Date: 2002-05-05 02:35:48 UTC
From: redmenaced
Topic: 1258  Message: 1258

HA!!

Made you look!

Just kidding.

If you are frustrated in finding a T-368 for sale the best solution is to call your representative and senators and tell him/her to tell the military to stop crushing them!!

If you DON'T do this you will have a hard time finding ANY military surplus radio equipment in the very near future.

Anyone have a KWM-2A/FRC-93 for sale??

Has anyone even SEEN a KWM-2A for sale recently?? What was the price?

Here it was the big hero of the Desert Storm War, saved our butts bigtime, and NONE of them were surplussed out, they were CRUSHED!!!

Can't find a T-368? I saw stacks of them at Seneca Army Depot, and at Griffiss AFB,..... waiting to be CRUSHED!!

Are you wondering where the military stocks of spare parts went for the T-368's and R-390A's etc?

I can only guess,

Joe KG2CI

I ran my T-368-C on and off for nearly a year in the boatanchors, AM window and the T-368/BC-610 group. I got one reply that was well outside of driving range (Houston to west coast) and the crating/shipping is really out of the question for a nice transmitter that is worth $1000 or more before the shipping expenses. The point is, I've recently seen several wants for the T3 in my general area where the person has been looking for a long time. My ads must have been invisible or maybe just chance poor timing. I have a pending sale for my transmitter but they are out there. A jpeg of the T-3/BC-610 below:

Hey Gang!

My first post to the group.

I've finally gotten my "Beastly" BC-610I, BC-614, and BC-939A.

My BC-614 was "generously" MFP'd - PRIOR to assembly. So it has a "nasty" tendency to get RF into it and NOT kill it through the bypass capacitors. I know I have to go "completely" through it from one end to the other and lift ground points and add a star washer to bite through the coating.

What I'm trying to find is an on-line copy of TM 11-5054. I have PDFs of -20P and 35P. I'd really like to find the TM that specifically applies to the BC-614-E, -F, -H and -I. The coverage in the BC-610 TM is abysmal.

I produce a CD containing mil manuals for use on Windows PC's. The files are Adobe .pdf format and
can be viewed or printed. The CD is $10 which includes
first class postage in US (add $1 extra for Canada and
$2 for other international destinations). Anyone wanting
a CD can pay via PayPal, Billpoint, or mail a check
to me at:

Philip Mills
P.O. Box 1307
Friendswood, TX 77549-1307

Please be sure to include a note indicating that you want
the mil manual CD. The list below shows the contents:

acro-read.exe Adobe Acrobat reader 4.05 installation

AN-GRR-5.pdf TM 11-295, TO 16-30-GRR5-5, Radio Receiving
Set AN/GRR-5, 100+ pages with drawings and
schematics covering the R-174 receiver and
PU-308 power supply.

ARC5-man.pdf AN 16-30ARC5-2, "Handbook Maintenance
Instructions AN/ARC-5 LF MF HF Components".
Approximately 290 pages of pictures,
drawings, schematics, operation, and
maintenance information.

ARR41-501.pdf NAVAIR 16-30ARR41-501, Handbook Operation
Instructions Radio Receiving Set An ARR-41.
13 pages of operating info.

ARR41-502.pdf NAVWEPS 16-30ARR41-502, Handbook Service
Instructions Radio Receiving Set AN ARR-41.
90 plus pages including schematic and
service information.

ARR41-503.pdf NAVAER 16-30ARR41-503, Handbook Overhaul
Instructions Radio Receiving Set AN/ARR-41.
40 plus pages, incomplete.

ARR41-mag.pdf Several magazine articles covering the
modificatin and use of the ARR-41.

ART-13.pdf NAVWEPS 16-30ART13-5, Handbook Maintenance
Instructions Aircraft Radio Equipment AN/ART-13
Oscillator 0-17/ART-13A. The big one, over 350

pages of tuning charts, maintenance instructions,
drawings, and schematics.

BC-224A.pdf TO 08-10-24, Instruction Book for Radio Receiver
BC-224-A. RCA, 60 plus pages including schematics.

BC-312-342.pdf TM11-850, Radio Receivers BC-312, BC-342, BC-314,
and BC-344 (multiple versions of each). Includes
schematics and troubleshooting information.

BC-348J-N-Q.pdf Handbook of Maintenance Instructions for Radio
Receivers BC-348-J, BC-348-N and BC-348-Q,
79 pages plus schematics and diagrams.

BC-348E-M-P.pdf Instruction Book for Operation and Maintenance
of Radio Receivers BC-348-E, BC-348-M and
BC-348-P, 80 pages including schematics and
diagrams.

BC348-BC224-1.pdf AN 08-10-209, Handbook of Maintenance Instructions
for Radio Receivers BC-348-E/M/O/P/S and
BC-224-E/G/H/L. 80 plus pages with schematics and
diagrams.

BC348-BC224-2.pdf TO 12R2-eBC-112, Handbook of Maintenance Instructions
for Radio Receivers BC-224-F/K and BC-348-H/K/L/R.
80 plus pages with schematics and diagrams.

BC-375-E.pdf Instruction Book for Operation and Maintenance
of Radio Transmitter BC-375-E and Associated
Equipment, 88 pages including schematics and
diagrams.

BC-610-E-I.pdf TM11-826, TO 31R2-3SCR399-21, Radio Transmitters
BC-610-E,-F, -G, -H, -I and Radio Transmitter
T-213/GRC-26 and Antenna Tuning Units BC-939A
and -B, 150 plus pages including schematics
and changes C-1, C-5, and C-6.

BC-614.pdf TM11-5054, TO 16-40BC614-6, Speech Amplifier
BC-614-E,F,H, and I, 60 plus pages with schematics
and wiring diagrams.

BC-779-A_B.pdf TM11-866, Radio Receivers BC-779-A, -B,
BC-794-A, -B, BC-1004-B, -C, -D, and
R-129U. Power Supply Units RA-74-B, -C,
RA-84-A, -B, and RA-94-A. Radio Sets
SCR-2454-A, -B, SCR-704, and AN/FRR-4.
94 pages plus schematics, changes C1 and C2,
and April 1952 Supplement.

BC-1031-Pana.pdf TM11-446, Panoramic Adaptors BC-1031-A, BC-1031-B,
BC-1032-A, and BC-1032-B, 100 plus pages with

schematics

command_sets.pdf "Command Sets" by CQ Magazine - a compendium
of articles on modifying and using command sets.

conv-man-v1.pdf "Surplus Radio Conversion Manual - Volume 1",
120+ pages of conversion information and
schematics.

conv-man-v2.pdf "Surplus Radio Conversion Manual - Volume 2",
125+ pages of conversion information and
schematics.

conv-man-v3.pdf "Surplus Radio Conversion Manual - Volume 3",
80+ pages of conversion information and
schematics.

guide-to-ARC.pdf "A Users Guide to Aircraft Radio Corporation
Receivers" by M.W. Tauson. A thorough listing
of ARC transmitters and receivers, model numbers,
nomenclature, plugs and pin-outs. Over 45 pages
of great information.

I-177-man.pdf TM 11-2627, Tube Tester I-177. 57 pages of
operation, theory, and tube data plus changes
C-1 and C-3 which update it to cover the
-A and -B models.

index.txt this file.

index-to-surplus.pdf A 53 page index of articles appearing in QST and
CQ on utilizing or modifying military surplus
equipment.

ME-165g.pdf TM11-6625-333-15, Standing Wave Ratio Power
Meter ME-165/G

Mil-Hdbk-213A.pdf Military Handbook, Electron Tubes, Cross Index
and Type Identification.

R274-FRR.pdf TM11-897, Radio Receiver R274/FRR, 104 pages with
schematics. (SX-73)

R390-maint.pdf TM11-5820-357-35, Field and Depot Maintenance
Manual Radio Receiver R390/URR, 213 pages.

R390-A-maint.pdf TM11-5820-358-35, Field and Depot Maintenance
Manual, Radio Receiver R390A/URR, 212 pages.

R391-maint.pdf TM11-863, Instruction Book for Radio Receiver
R391/URR, 308 pages.

R392-maint.pdf TM11-858, Instruction Book for Radio Receiver
R392/URR, 232 pages.

SCR-211.pdf TM11-300, TO16-40SCR211-5, Frequency Meter Sets
SCR-211-A, B, C, D, E, F, J, K, L, M, N, O, P, Q,
R, T, AA, AC, AE, AF, AG, AH, AJ, AK, AL. 161 pages
including schematics and diagrams.

SP600-JX.pdf General Purpose Communications Receiver Model SP-600-JX
and SP-600-J, May 1966 repring of Issue 7, May 1956,
Hammarlund Manufacturing Company, 40 pages including
schematics and drawings.

SRR-11-13.pdf Navships 91875(A), Instruction Book for Radio
Receiving Sets AN/SRR-11, AN/SRR-12, AN/SRR-13.
The big one, several hundred pages of information,
diagrams, and schematics. October 1953 manual
with change 1 dated August 1956.

t195-maint.pdf TM11-806, TO 31R2-2GRC19-11, Radio Transmitter
T-195/GRC-19, field maintenance manual, 190 pages.

t195-schem.pdf Schematics accompanying above TM11-806.

t195-oper.pdf TM11-5820-295-10, Operators Manual Radio Set
AN/GRC-19, 48 pages.

# 1267. Need rear cover for BC-610-E

Yahoo group: T-368_BC-610
Date: 2002-05-06 22:46:48 UTC
From: Robert W. Downs
Topic: 1267  Message: 1267

Groups,

I need a rear cover for a BC-610-E. One from a -D or earlier might work, but it has been too many years since I used one of the early sets to remember for sure. I know that the ones from the -F and later will not work (I have an F and had three T-213/GRC-26's).

Does anyone know the history behind the HT-4i nomenclature?
I have just gotten a transmitter that looks like a BC-610i but the plate says HT-4i serial # 10 from Hallicrafters . Also the speech amp is labeled HT5G rather than the usual BC-614. Both seem to be post-war.

What was the story behind these labels not saying BC610?

Tom,

A check of the advertising section of the 1946 Radio Amateur's Handbook reveals a Hallicrafters advertisement for the HT-4E and companion HT-5E speech amp. The "i" and "G" may have been commercial models that came along later.

Tom -

This is some very vague information I received from another ham, but hopefully it will help explain.

Seems that Hallicrafters made some 10 special production later model HT-4s for MARS use in the 50's sometime. I don't recall what the designation was since I didn't take notes, but the next time I see Bill(he lives in Maine), I'll ask him again. He was relaying the info to me after I was given an HT-4 carcass out in Colorado of the later design. He said these late HT-4s are quite rare, but even if it isn't one of these 10, it would seem to indicate that Halli did indeed make more commercial HT-4s after the war. I almost remember seeing an ad in an old QST or Radio News showing the later style and calling it the HT-4.

Hope this helps. Nothing tremendously concrete, but at least an indication of later non-military models being produced.

Then from the AM Window BBS
(http://www.amwindow.org/wwwboard/wwwboard.html):

Tom,
To my knowledge the last HT-4 was designated the HT4-I in 1953. There were only a few made. The HT4-H was produced in 1952. That's about all the information I have at the present time. It's interesting to find out that series transmitter was produced for about 15 years.
Hope this helps.

A dynamite little vfo can be made using the pto of a T-195. No rocket science but basically build a small regulated supply around the pto, provide slow rate tuning such as a National Velvet dial and you are off to the races. Very stable and plenty of drive using coax and a old xtal plugged right into the tuning unit socket. Got a picture on line if interested. Can't see the on-off switch, pilot light or National Velvet but it's there.

# 1279. HT-4-I

Yahoo group: T-368_BC-610
Date: 2002-05-08 12:53:48 UTC
From: k5jv
Topic: 1279  Message: 1279

Greetings to all,

The original Hallicrafters transmitter was the HT-4. With the advent of WW-II, the military took the HT-4 and produced it as the BC-610. The models went through A,B,C,D, E,F,G,H,&I. Certain models were converted to the T-213. After the war, Hallicrafters resumed civilian production as the HT-4-I because the "I" model was what they were tooled up for.

In my library of manuals, I have very late (Green) HT-4-I/HT-5-I manual. It clearly shows that the after-war model of the HT-4 was simply a BC-610-I with an HT-4-I name plate.

Topic: 1274  Message: 1280

I feel I must chime in here, so here goes. The VFO is as
Stable as a BC-221 if operated properly! The problem is
NOT the VFO, mainly the problem is the AC MAINS,
as in the input to the transmitter. The vfo will usually not
move around once the unit has come up to a stable temp.

The AC mains has to be a 115-120 30 ampere service
I have investigated this and nothing else works better.
I use a Variac in the mains line to the transmitter, read
auto-transformer, set the voltage to 115 V.A.C. then follow the procedures
in the MANUAL for setting the
BC-610 to frequency, check the frequency with a
counter. wait twenty minutes and check it again readjust accordingly.

If when you go to full power output (XMIT) and the filament voltmeter drops
from the 5.0 volt setting then
you AC in line is sagging and MUST be corrected. When
operating CW it is best to have the AC input to the Plate HV transformer on
a separate variac that will eliminate
chirp when keying the transmitter in CW mode and moves
the AC input to the low voltage supplies to a stable source, and NO drift No
chirp no movement of freq.
except intentionally.

There are several foreign broadcasters that use these transmitters STILL and
they are not XTAL controlled
but still very stable, in AM mode, and run 24/7

Greetings to all,

I have a O-39C VFO for the BC-610 in very good condition, in original case, available for $350 plus packing and shipping. I can deliver this unit to Dayton, Manassas and return to Texas next week. I can deliver this unit to Montana, Oregon, California, and back to Texas in July or August. The Unit looks good. It has been in storage for several years.

The Halllicrafters advertisement in the 1946 handbook describes an HT-4E.
The "I" apparently came along later. I wonder if there were F, G and H models
too tracking the BC-610 models produced during the post-War period?

# 1285. BC-610 on 160 meters.

Yahoo group: T-368_BC-610
Date: 2002-05-08 18:26:46 UTC
From: f6fed
Topic: 1285  Message: 1285

Hello,

With the frequency conversion kit MC-509, working on 1.8 MHz is possible
for the BC-610.

The modification of Radio-Transmitter BC-610 is unsolder one end of
resistor
R9. Unsolder and resolder at each frequency change is very difficult.

Has anyone knowledge it is possible to make this resistor "plug-in-unit" ?

Many thanks for help.

Also I'm needing the TU-61.

73.

# 1287. VFO

Yahoo group: T-368_BC-610
Date: 2002-05-09 00:15:54 UTC
From: k5jv
Topic: 1287  Message: 1287

Greetings to all,

Thanks for all the action on the O-39C VFO/Keyer. It now has a new home and I hope will soon be in use again on the air.

The best external VFO that I have ever used with the BC-610 is a slightly modified T-368 tuning unit. They are readily available and work great. I built mine into a Collins "S" Line cabinet. It looks great, works great, and is small enough to fit just about anywhere. I used a regular wood cutting router to shape the new 1/8" thick aluminum front paned. Nothing to it. Paint it black and most folks will think it is original BC-610 something-or-other. Leave it original (you must paint the new front panel, of course) and most folks will think that you have some wonderful, rear piece of Collins equipment that they have never seen before. At any rate, it works great from 160 meters up to the end of your imagination or the 610's capability.

The real question that comes to my mind is why go to all the trouble to use an external VFO when the original Master Oscillator works very well just as it is, if you have sufficient 115 VAC power line regulation. Most household 115 VAC circuits are wired with #14 wire and are rated at a max load of no more than a 15 amps. With age, normal wear and tear on the plugs and wiring, you will lucky to be able draw 10 amps without a noticeable sag in voltage. Take a little time and wire in a decent 35-50 amp circuit to run your BC-610, or other Boat Anchor Transmitter from. My advice is to use the largest wire that you can afford, #8 or #6 is my suggestion. When someone complains about a little drift or slight warble on my signal, I tell them to turn off their BFO and listen to AM the way it was intended to be listened to. The complaints invariably stop. True, some MO's drift more than others, just find one that is acceptably stable. Where is the logic in expecting a 1930 design to have the stability of a 2000 model? I use the MO on my T-213 on 3880 MHz regularly. I do not think the control has been touched in years. Use the old equipment as it is and enjoy it! Also, since AM is usually a one frequency operation (in most areas), there is nothing wrong with crystal control. Crystals are usually free or can be picked up at most ham Fests for a few bucks. Blank crystal holders are available, I have some. Find a crystals just below the desired frequency, get a couple of them (in case you make a mistake), some tooth powder, and simply rub it up to your desired frequency. This was common practice when I became a ham. Today, it is almost a lost art -- I think that is a shame, but I am old fashioned.

From: Robert W. Downs
Topic: 1269  Message: 1288

Tom & Group,

Took me a few days to confirm the letters, but another collector that I know (and not on this list) had until recently an HT-4H, also with an HT-5G. He says that the original manual that he also had matched the letters (H & G). I think I've seen another HT-5G here locally. Has anyone ever seen an HT-5F, H or I?

An interesting bit of trivia is that I have never come across a TM covering a BC-614-G. TM 11-4043 covers the A through the F. And TM 11-5054 covers the E, F, H and I.

>I have just gotten a transmitter that looks like a BC-610i but the plate says HT-4i serial # 10 from Hallicrafters . Also the speech amp is labeled
HT5G rather than the usual BC-614. Both seem to be post-war.

Hey Lon,

The BC-939-A or B IS the correct tuner for the 610-E. The 729
was a real piece of crap, used in the SCR299 with the 610-b, c, d.
The 729 only covers 2-8mc whereas the BC-939-A or B covers 2 -18mc
to match the extended coverage of the 610-E and later. The 729 is
essentially a "Collector item" . A 610-E would need to be Drilled
"ARRRRGHH" to properly mount a 729. Please refer to the SCR-399/499
TM for the complete manifest for the SCR-399 which used the 610-E and
later models. Pieces parts of my SCR-499 and a photo of the MC-269
table restoration with Equipment's are visible on my web page at

http://www.ameritech.net/users/dharlan/dans.htm

I now have a scanner and will work on putting up pix of
a restored BC-610-C with the BC-729. But trust me, If you have
a 939, you don't want a 729. Of course if your longing to see arc's
flashovers, corona and smoke then the 729 will fill the bill!

Sorry for the inconvenience.

Tom

---

I received this message from a friend in Fla. I checked and I had the virus.
Please follow the directions. I deleted it from my computer, but it must have spread to all of you. If I got it from her than you got it from me. SORRY.

You are receiving this memo because you are in my address book and my address
book got a virus named jdbgmgr.exe. This virus is not detected by Norton or McAfee antivirus systems. I am told by the person who gave it to me that the
virus stays quiet for 14 days before damaging the system. It is sent automaticallly by the address book, whether or not you send e-mails to your contacts. The note sent to my friend was dated the 13th of May.

1. Go to start then hit the FIND option.
2. In the files/folder option, write the name "jdbgmgr.exe" (without the " marks)
3. Click "find now"
4. The virus has a little bear icon with the name jdbgmgr.exe DO NOT OPEN IT!
5. RIGHT CLICK AND DELETE IT!
6. Go to your Recycle bin and DELETE it from there.

If you find the virus in your computer you must contact all the people in your address book so that they can eradicate it in their own address book and
forward the message to their contacts.

The reason I am contacting you is that I found it on my computer and I have readicated it. If you find on yours you will have to do the same as I have done.

Sorry about all this but better safe than sorry!

# 1304. Re: [T-368_BC-610] BC-610 list keeper

Yahoo group: T-368_BC-610
Date: 2002-05-19 16:47:55 UTC
From: Joe Foley
Topic: 1303  Message: 1304

Hi,

I am the list originator and keeper, gee, that sounds
ominous, doesn't it?

They are both the same list, its all one. It just
depends on who is posting at the time,..... not
much of that going on right now.

The only real way to steer the discussion, just like
on the radio, is to pose a question or post something
yourself.

Have at it,

73

# 1308. Crystals for the 610?

Yahoo group: T-368_BC-610
Date: 2002-05-22 01:33:24 UTC
From: jerry
Topic: 1308  Message: 1308

Hi, everybody, Just about ready to check the 610 for leaks(smoke) Got a cord after 2 trips to skycraft, I was lucky and found a 3 wire connector that was a direct fit in the 610 chassis. Now I find I made a mistake a couple years ago and ordered a 7295 crystal from CW crystals. Does anyone know the best place to purchase a rock for 7290, I have some holders for the 610 I could send to whoever would grind rock. Later I will try some various vfo's I have. Also still looking for a 40 meter coil But I can manufacture one if needed. Just listening to WA1HLR and K4CR and others all with nice signals into central Florida. 73s Jerry

Gee. It sounds like a lot of us are looking for a working T3. I'm looking for one in the Southeastern U.S, although hoping for one within a 350 or so mile radius. (Georgia, Carolinas, North Florida area).

My new plan is to wait until all you guys find your T-3s before looking for one for myself. That way, there'll have less competition. I'll just busy myself with the floor-sweepins until then. Besides, once Dave finds one I can just run over the hill and practice with his. Right Dave?

*chuckle*

From: rbethman@comcast.net
Topic: 1315  Message: 1315

Hey Gang!

The "Beast" is up and running! Now I am in search of additional components.

1) A TU-52, 6.35 to 8.0 Mc. (The one I have works, but an internal coil looks to have been "cooked" in days gone by. I don't know how long it will last.

2) All manner and sort of FT-171-B crystals. I have about 8 or 9. Those outside the ham bands are fine, if they are below the bands. I'll diligently and carefully do the tooth powder routine with a piece of plate glass and tenderly bring them up to the needed frequency.

3) A BX-34 FT-171-B crystal box. Got to have some place to store these monsters.

Thanks for reading! And Thanks for your searches!

Bob - N0DGN Craf-T-Bob (Because I love Hallicrafters!)

From: W2ZR@aol.com
Topic: 1317  Message: 1317

Greetings from South Texas,

I'm posting today for a Friend in Alpine,Texas- Bert/WT5O. Bert has a fully restored, rewired, recapped and had on the air a wonderful old BC-610. Due to some health problems Bert sent a note to me and asked me to help him sell this very fine transmitter. Bert has been on the air with the 3880, NOS group which meets around 4:00 AM till the last man falls generally around 6:00 AM most every morning.

The transmitter for obvious reasons is "PICK UP ONLY" . Please don't contact me.. contact Bert if you're interested in the BC-610. Bert is a retired radio technician so the work is expertly done. He can supply you with all details concerning the restoration.

Berts address: teep@...

PLEASE SEND ALL REQUEST TO BERT....

73,
Tony/W5OD
River House Radio

It may be yours, but who are you? Also in my humble opinion it takes gall for someone with a feed back of 6 to demand USPO MO only as payment. A fellow ham? I have concluded about 2500 transactions on ebay to date, unfortunately most were purchases, but over 99% were taken care of by a check. About the only time I resorted to an MO, or direct bank transfer was for overseas purchases that I made. Again, it is a personal opinion, but I find it difficult to trust a seller that has to declare MO as the payment method. For T-368 content, I am slowly making room in the basement and in a few months hope to be able to get to my T-368F and fix it and then join the rest of you on good old AM. 73 - Mike

Topic: 1311  Message: 1321

I found mine! I left out about 5AM this morning with my daughter
riding along to keep me company, and returned about 12 hours later
with my T-368E. Bendix, order 3219-PP-59, S/N 238. It has an
overhaul label from Pirmasens Army Depot stating that it was
overhauled, with a date code on that label of "3059". Maybe week 30
of 1959? Perhaps someone can tell me how to translate the date code.

I hope to have it back on the air in a few weeks. It was on the air
yesterday afternoon at the previous owner's QTH. I'm in the process
of renovating the area where my "new" ham station will be located.
As soon as I get the flooring and electrical complete, I'll move the
T-3 into position.

This one has some WA1HLR mods to the speech amplifier, but apparently
none to the RF deck. I plan to use it as-is initially, but would
welcome recommendations on whether to proceed with the RF deck mods.

Hope to hear you on the air soon.

I don't know the year of production on that '59 contract. But I bet there wasn't an overhaul the the same year as the contract. It's probably a 'Julian' date in the format: one year digit, three day digits = 59th day (Feb 28) of 1963, 1973, 1983, ... We used the Julian date for a lot of maintenance records. I would guess that a rehab only 4 years after the contract date is unlikely. 1973 or '83 are good bets. I would lean toward '73. I'm not sure when the T-368's started to be phased out. Maybe after mid 80's. I saw lots of them in the 60's & 70's. I think the Pirmasens depot was closed several years back with the draw-down, but I'm to sure.

I returned from my second tour in Germany in 1981.

# 1323. T-195's for sale

Yahoo group: T-368_BC-610
Date: 2002-06-13 15:48:51 UTC
From: k5jv
Topic: 1323  Message: 1323

Greetings to all,

I have two very nice T-195 transmitters for sale. They are still in the shipping boxes from the Tobyhana(sp) overhaul facility. They have never had power applied since leaving the shop. I am asking $500 each for these transmitters and will deliver them anywhere close to my route from Houston, Minnesota, S. Dakota, Montana, Idaho, Washington, Oregon, California, and back to Houston. I will be leaving Houston around the 15th of July on this trip.

I also have a very nice, working T-368-C for $1,700, Two T-213's from GRC-26 (BC-610's), one still in wooden crate, and one set up working in my shop for $1,500 each (with accessories). I will be glad to deliver these items anywhere within reason on the above mentioned trip.

Now that makes perfect sense. There is also a red
stamp above the label with a "3 73" date on the stamp.
I can't read the words above the "3 73", but there
are a few words there. A picture can be seen at
http://www.r-390a.us/T368.htm

Thanks,
Walter - KK4DF

Nice picture, Walt - and nice find. If the rest of the unit looks that nice, it must be nearly new. I have only the RF deck for one, it's sitting upstairs in my carriage house with other projects and pieces. Doesn't look anything like yours, though - it's all one color: dust!

You'll have one of the best R-390*/T-368 stations around when you get done. And it'll actually work, too!

Congrats! Be sure to post some pics of the completed station.

de Todd/'Boomer' KA1KAQ

BTW, haven't forgotten about those plug in caps, just haven't gotten back to dig that box out. Too many projects, Roy Morgan can vouch for this.

# 1326. Wanted: Probe for RCA WV98V VTVM..

Yahoo group: T-368_BC-610
Date: 2002-06-16 06:18:38 UTC
From: Gregory W. Moore
Topic: 1326  Message: 1326

For those lists in which this request is Off Topic, my apologies. I am, however trying to get the greatest possible contact base to try to locate a part for a RCA VTVM (Their trade name was "Senior VoltOhmyst, Type WV-98C.

The part(s) I am interested in aare the DC/AC-OHMS probe and cable, RCA type WG-299E
NOTE: According to the manual, Probe/Cables from WG-299A through WG299E are acceptable replacements.

In addition, if anyone has one available for sale, I would like a
Crystal Diode Probe
Type WG-301A

A High Voltage Probe Type WG411A or Type WG289

A Multiplier Resistor tip Type WG-206

If anyone has these for sale, I would greatly appreciate your contact here on any of the lists, or directly to my email addy
gwmoore@....

Once contact is made we can discuss price and shipping.
Thanks to all for your assistance, and apologies again if I am off topic for any of the lists to which I posted.

# 1328. Loss of PA grid current

Yahoo group: T-368_BC-610
Date: 2002-06-16 23:26:11 UTC
From: kk4df
Topic: 1328  Message: 1328

I've had my new T-368 E on the air a number of hours this weekend. Late today, I noticed a total loss of PA Grid current, and not surprisingly a low plate current to go along with it. I pulled and checked the IPA tube (V104), but it tests OK. Same problem across all bands.

Everytime I turn the transmitter off for 15 or so minutes and turn it back on, the problem seems to clear up for a little while. Is it likely that C2 is shorting as it heats up? Any suggestions on what else to look for will be appreciated.

Walter Wilson - KK4DF

# 1329. BC-610-E blower thermostat and thanks to Jim Walker

I've substituted a different PA final tube, just in case the grid is shorting to something when the tube gets hot. I'd like to know for sure if the RF deck fan is running. What is the best and safest way to check it. I can't hear it over the main chassis blower fan.

Jerry,

I got my 610(I) from Jim.

One possible place to look for such a thermostat would be either an auto dealer or a Honda motorcycle dealer. They use thermostats to run the fans for the radiator. I know my GoldWing uses one.

Jim is GREAT people!

Walter,
Jim Walker here WB2FCN. You will need a long shafted
flat blade screwdriver, preferably with a large handle on it.
with the case closed and the unit running in standby, if you place the
screwdriver "Gently" on the corner of the T-368
case, over the corner where the 4-400A is, and put your
ear to the handle of the screwdriver, you should hear two
different speed rotary sounds, if you only hear one then it
is NOT running. Don't push to hard on the screwdriver
this technique works for me.

Topic: 1333  Message: 1333

Greetings to all,

The T-368-C, one of the T-195's. and the "I" model BC-610 have been spoken for. There remains one extremely nice T-195 NOS from Tobihana overhaul for $500, two GRC-26 T-213's (BC-610's), one in wooden shipping crate, the other is operational in my shop for $1,500 with accessories. I will be glad to deliver any of these items anywhere, within a reasonable driving distant on my trip from Houston to Rochester, MN, Montana, Bend, Or, Fresno, CA, LA area and back to Houston.

+++++++++
The left handle of the RF deck will vibrate if the PA
blower is running, if it isn't running you won't feel
the vibration.

Joe

# 1335. T-3 removal question

Yahoo group: T-368_BC-610
Date: 2002-06-20 15:55:47 UTC
From: tbigelow@pop.state.vt.us
Topic: 1335  Message: 1335

Greetings to all -

This afternoon myself and Dave Cain, W1DEC will be helping a fellow list member pick up his new (to him) T-368 transmitter. Knowing that this is no small task nor one to be taken err.....'lightly', I am soliciting comments from those of you who have recently or previously obtained a T-3 to go along with your R-390s or just hold the house down. My experience is limited to the RF deck I wrassled into the upstairs of the carriage house after saving it from being turned into an antenna tuner and scrap metal. I have a pick-up truck, appliance dolly/hand truck, rope, and bungie cords(just in case) so we should be pretty well set for tying it up once we capture it. I'm mainly curious to know if there are any pitfalls to avoid like tubes that catch when sliding out section, or any special sequences of events we should follow. Our plan is to remove each deck from the cabinet, put the cabinet in the truck, then reinstall the decks for the trip to prevent them sliding around or being damaged in any way.

Any helpful hints will be appreciated. We're off to retreive it in about 5 hours.

Thanks -

de Todd/'Boomer' KA1KAQ

Boomer,
You got three guys, check to see if the tube hold down
clamps are in place, if so, pull the decks starting at the
RF deck then the Modulator deck then the Power supply deck. Take them to the
vicinity of the truck. The power supply deck should have two guys on the HV
transformer side, one guy on the opposite side. move that to the area
near the truck. Then two guys can move the empty cabinet, three guys to lift
it SAFELY to the truck, NO
hand truck required. Put the cabinet in the rear portion
towards cab of truck, then reinstall the decks starting with the Power
supply, then Modulator, then RF deck, tighten the front panel screws. strap
the unit securely to the transport vehicle, the tubes WON'T bounce out of
their sockets, unless of course you manage to roll the truck.
Good Luck, I have moved several all alone and had no problems, except the
weight factor a pickup will only carry three at a time which for me meant 2
trips a while
back.
Jim

From: Joe Foley
Topic: 1335  Message: 1337

Unplug it! pull the RF deck out about 4", short all
HV conductors to ground!

Reach to the rear, right-hand corner of the RF deck
and unplug the cannon connector there, DON'T drop it,
it may hit the 5R4's on the modulator deck.

When sliding the RF deck out of the cabinet don't tip
the front down too far as the 4-400 may catch the
front edge of the cabinet and break!!

When setting the RF deck down be sure to set it on
something FLAT as the vacuum variable caps are close
to the bottom and could be damaged. They are
EXPENSIVE!!

Pull the MODULATOR deck out 4" and unplug TWO cannon
connectors in the left front, this will clear all
wiring on this deck. Check the coaxes going to the
speech amp on the left side, mine always want to catch
on the cabinet.

The power supply deck comes out the same as the
modulator deck, becareful not to cause mechanical
shock to the plate transformer as they can leak oil
around the HV posts on the bottom.

That leaves only the blower and the antenna vacuum
relay in the cabinet to becareful of.

Use some caution not to let any of the chassis twist,
especially the RF deck, as this can cause brittle
things to crack. Most notably the tank coil!

I can load mine into the BASAR/RV by myself but the
power supply deck is really too much to lift alone.

You will, very soon, learn why heavy casters are the
first order of business when bringing home a T-368! A
sub-frame made of 3" channel iron is not overkill.
The eight heavy handles on a T-368 are GOOD!

Joe

# 1338. New Custodian & Caretaker for T-368 C/URT S/N 581, Crosley Div

Yahoo group: T-368_BC-610
Date: 2002-06-22 11:25:56 UTC
From: w1rc
Topic: 1338  Message: 1338

Hi Gang:

I'm the lucky guy. Got a call on Tuesday around 6:00PM from a lady who told me she had a radio transmitter that belonged to her son sitting her garage and it had to go by Thursday or it was going to the dump. She had sold the house and the closing was on Friday. Her son Darren(the ham) was there and told me it was a T-368 C. I could have it for the taking. He just didn't have room for it where he is living and the clock had run out. It was me or the dump. Todd Bigelow, aka "Boomer" and I hauled it from near Burlington to White River Jct on Thursday. Dave W1DEC helped us load the 650 pounds of bulletproof radio into the back of Boomer's pick-em-up truck and off we went 90 miles down Interstate 89. It is now occupying a space of honor in my garage awaiting the removal of the wooden "skid" and installation of a set of heavy duty casters. Once this has been done a thorough examination will be made and a service plan outlined. I hope to get it on the air by November or December.

Thanks to the folks who helped me move this puppy with such short notice, ie: Boomer, Dave, a friend who told the lady about me and especially to WA1AM who allowed me the honor and priviledge to look after and enjoy this wonderful treasure for hopefully many years to come.

Looking forward to exchanging wisdom and knowledge with you folks.

73 all,

Michael
W1RC

I sometimes get reports of bouncing E-mail addresses from the yahoo groups system, often its a temporary screw up so I just "un-bounce" them,.... usually.

If you've missed some posts that's probably what happened.

Steve, Monica's E-mail address was a fake, she got denied!

The purpose of this post is to weed out any other bouncing E-mail addresses, I usually get a few after someone posts something.

Joe

# 1344. Museum Ships on AM

Yahoo group: T-368_BC-610
Date: 2002-07-04 14:10:42 UTC
From: W2ZR@aol.com
Topic: 1344  Message: 1344

http://www.qsl.net/k1usn/event.html

Hi Gang,
There's a special event coming up involving many of our warships, including the battleship New Jersey. For those who haven't committed the registry to memory, that fine ship is the QTH of a T-368F. Hope they fire it up!

73,
Steve W2ZR

# 1346. T-368 aboard New Jersey not QRV

Yahoo group: T-368_BC-610
Date: 2002-07-04 16:32:16 UTC
From: W2ZR@aol.com
Topic: 1346  Message: 1346

(the following is a reply to an inquiry I made this morning)

Hi Steve,

Thanks for the e-mail.

Well as far as I know, the T-368 isn't ready for primetime yet. There are a couple of guys that are working on getting it back in working order but its not ready yet. The person in charge of the vintage gear restorations is Stan Hojnacki WA2NPL hojofam@...

As far as other gear, we recently picked up a couple AN/URT-23's which are 1980 vintage Navy transmitters. They haven't been fired up yet but appear to be in excellent condition. As for other "vintage" gear, I'll refer you to our
Chief Engineer - Dave Burgess - WA2TVS for that info. Dave is in charge of all radio gear onboard including the vintage equipment. Dave's e-mail is WA2TVS@.... I'm copying Dave on this reply so he will know who you are.

Best 73 and hope to work you during the Museum Ships Event.

Harry Bryant - AA2WN
BNJARS Event Coordinator - NJ2BB

# 1347. PIRMASENS Army Depot

From: Michael Crestohl
Topic: 1347  Message: 1347

Hi Gang:

Can anyone tell me a bit more about the PIRMASENS Army Depot - where is it, etc?
Seems like several of our rigs were overhauled there.

73,

Michael

It looks like the Pirmasens Army Depot is located in Pirmasens, Germany. It appears to be both a medical material center and a messaging hub.

Look here:
http://www.globalsecurity.org/military/facility/pirmasens.htm

One interesting excerpt from this site:
After the war the Allies used the lower level as depot for war material. In the mid-1960s the US Army General Depot at Pirmasens managed the "supply cave" below Hill 486, with acres and acres of "stuff". The Depot`s "controlled environment" storage buildings kept tanks in them - fueled and armed - all ready to roll.

# 1349. Power for the T-3

Yahoo group: T-368_BC-610
Date: 2002-07-05 23:09:57 UTC
From: Jerry Kincade
Topic: 1349  Message: 1349

I am reluctant to run my recently acquired T3C on 120V, although I do have 120V circuits wired with #12 wire and 20A breakers available. I also have a couple of 240V circuits in the shack available, both using four-conductor #10 cable. One is running my linear, the other is a "spare". What are you guys doing to power your T3's? It would seem a stout 240/120 stepdown transformer would be a nice arrangement. Alternatively, I also have a humongous 240V Variac I suppose I could use. Are you guys doing anything special in this regard, or do you just plug it into 120 and let 'er rip?
Thanks,
Jerry W5KP Mustang, OK

Jerry,

I took one leg of the 240V circuit for my linear, and the ground, to
make a #10 circuit @ 120V for my BC-610. Works absolutely purrrrfect!

# 1351. T-3 Survey

Yahoo group: T-368_BC-610
Date: 2002-07-07 00:43:32 UTC
From: Michael Crestohl
Topic: 1351  Message: 1351

I wonder if anyone has done a survey of T-368s contracts and serial numbers?
Tom Marcotte, N5OFF has done an outstanding job with the survey he did of
the
R-390 and 390A. This consisted of polling owners with the contractor
information
and serial number. He then correlated this data to determine the highest
serial
number of each contract to try to get a ball-park figure of how many were made.

Would be interesting to try to find out how many were made by each
contractor and
who they were.

73,

Michael

<<I wonder if anyone has done a survey of T-368s contracts and serial numbers?>>

Hi Mike et al,
It was my curiosity about the same thing that prompted me to start keeping a registry. There are 9 manufacturers represented in the registry. My guess is that Barker & Williamson did the design work since they seem to have built the earliest ones. I wish I could find more info about them. Are there any folks out there who have not listed their rigs in the registry yet?

73,
Steve W2ZR

+++++++
You're scaring me here, Jerry!

I hope you took the hot and a NEUTRAL, with a seperate ground over to the T-3.

No, the neutral and the ground are NOT the same thing at that point.

Taking one leg of the 240 is not good, it should have its own single pole breaker on it.

The T-3 should have a 30 amp 120 volt feed to it as most of them draw 21 amps on transmit.

# 1355. Re: [T-368_BC-610] Power for the T-3

Yahoo group: T-368_BC-610
Date: 2002-07-09 02:38:30 UTC
From: Joe Foley
Topic: 1349  Message: 1355

Hi Jerry,

Because of the surge on transmit the T-3 should have
its own 30 amp feeder. That would be 10 gauge wire if
the voltage drop due to length of the run doesn't
matter.

Of course a good ground to the cabinet is essential,
safety, not RF, 10 gauge would be nice.

No big deal to turn an unused 240 volt line into a
single pole 120 volt line at the panel, just put it on
a single pole breaker. Alternatively, you coult run
the 240 volt line into a two pole breaker box, they
sell them with only two breakers, and then just use
one of the breakers, the neutral connection, and the
ground. Save the other ciruit for a future BC-610!

Joe

# 1356. Re: [T-368_BC-610] this time without html

Yahoo group: T-368_BC-610
Date: 2002-07-09 03:15:23 UTC
From: Joe Foley
Topic: 1353  Message: 1356

My question is:

Did Ecco make whole units? Or did they just do the
sheetmetal?

They were a cooking ware company, If I remember right.
Or maybe a big sheetmetal operation.

# 1358. neat movie abt Hallicrafters BC-610

Yahoo group: T-368_BC-610
Date: 2002-07-16 19:13:52 UTC
From: W2ZR@aol.com
Topic: 1358  Message: 1358

http://www.archive.org/movies/bytitle.html

Hi,
There's a really cool movie about the BC-610 transmitter and it's importance in WW2. It seems to have been made to inspire the Hallicrafters employees. If you're into BC-610's, Hallicrafters, military radios or ham radio in general, I'm sure you'll find this very neat. The movie is in two parts roughly 14 minutes each. Go to the website above and scroll down to "Voice of Victory". Be careful to click on "dial up" or "DSL".

# 1359. Let's talk to the ships!!!

Yahoo group: T-368_BC-610

From: redmenaced
Topic: 1359  Message: 1359

This would be a great oportunity to put the T-3's, BC-610's and HT-4's on the air and get this event noticed!

I don't think the USS New Jersey's T-3 is online yet but it will be interesting to see how many ships have their original equipment operating.

How many can make it?

Joe

6th Annual Museum Ships Radio Event AM Ops Next weekend(19th and 20th). Many of the museum ships will try and come up on the following freqs using AM with their original ships equipment. Most of the ships original equipment is world war two or earlier so there is no SSB.

Saturday July 20th 3885 Khz+- 0001Z - 0030Z
Saturday July 20th 7290 Khz 1400Z - 1530Z
Saturday July 20th 21425 Khz 1700Z - 1900Z
Sunday July 21st 3885 Khz 0000Z - 0330Z
Sunday July 21st 7290 Khz 1400Z - 1430Z
Sunday July 21st 21425 Khz 1600Z - 1900Z

14286 Kcs AM will also be attempted.

This should give AM'ers a chance to snag some neat QSL cards! If there is a qso on the freq at that time we will just join the qso for a quick hello so as to not disrupt anything.

The picture is of one of the TCK-4's I will be using during the event onboard the USS Salem.
During the rest of the event we will be using CW and SSB on more modern ham equipment.
Check out the USS Salem Radio Club web site for more info. USS Salem, Quincy, MA. uses K1USN.

Regards
Q, W1QWT

# 1365. HT-4 mod transformer??

Yahoo group: T-368_BC-610
Date: 2002-08-02 23:15:54 UTC
From: redmenaced
Topic: 1365  Message: 1365

From the AM Window BBS:

In my parts collection I have what I believe is an original pre-WWII HT-4 modulation transformer. The guy I got it from some 20 years ago said it was out of a BC-610. It looks similar to the transformer in a BC-610E, but this one is made by Kenyon and the BC-610E one is made by Stancor. It looks identical to the xfmr in a photo of the insides of an HT-4. t
It is an open-frome transformer, but the casting is shaped somewhat different from the 610-E one. I assume it is good. I would be willing to part with it if anyone has a real prewar HT-4 and wants a spare or needs a replacement. I would test it out in my HF-300 rig at 2000V/250MA to see if it works before shipping. I'd rather trade for other radio item(s) than cash, but I would entertain any kind of offer. I have no urgent need to get rid of it, but if someone has a need for it, I'd rather it be put to good use than just sit in my parts collection. E-mail me if you are interested. Otherwise make a mental note in case you ever run into someone who needs the xfmr for the HT-4.

Don K4KYV

Don's E-mail address is:

# 1366. T-368 Exciter

Yahoo group: T-368_BC-610
Date: 2002-08-04 15:18:10 UTC
From: storviken
Topic: 1366  Message: 1366

GM Group - perhaps someone with a running T-368 can assist me. I recently obtained the VFO/exciter at a hamfest and plan to use it to drive a Viking II-CDC. I have a schematic but need some assistance. Could anyone pls let me know the following:
1) On P-101/J-8 (between the exciter and the rest of the rig), the following voltages:
Pin # Key UP: Key Down:
6 -- --
7 -- --
8 -- --
With this info, I can rig a power supply. The other voltages (plates and screens) don't seem very critical and have built supplies for them.
2) On the 6000 tube (exciter IPA output), only found one source for it and they only wanted $75 for one. According to tube manuals, a 6AU5 or 6AV5 is a pin-for-pin replacement. Is this feasible (with the proper fila voltage, of course)?
3) Any hints on how to key the exciter for (a) CW (b) phone operation?
Tks for any assistance.

For a myriad of connectors, resistors - (1/2 W, 1 W, 2 W) - Capacitors at reasonable prices, try:

CCarvell@...

This is Clarence Carvell. I just visited him and his parts supplies. He has just about ALL you could want or ask for. He's trying to sell off over twenty years worth of collection of parts and other items.

I picked up an HP 410B, some 1 and 2W resistors and misc. other items from him. A very fine gentleman!

This list will be three years old on the 16th of this month!

There are 150 people subscribed to it.

How about a get-together on the 16th on 3.885 MHz at about 8:00 PM Eastern?

Ok, lets do this then.

I'll make the effort to keep this going for a LONG
time on a BUSY, BUSY band,

IF and I mean IF

There is a BUNCH of people there to help me!

Also, if the West COasters are going to play we'll
need someone to chase off SSB'er's. We won't be able
to be heard out there over a bunch of QRM.

If we get a good turn out maybe we can schedule a
regular net for that day/hour/band.

And don't forget the HT-4's!! We gotta have some
HT-4's.

Joe

# 1374. Looking for BC-939-B Parts

Yahoo group: T-368_BC-610
Date: 2002-08-10 19:44:15 UTC
From: wa7qzr
Topic: 1374  Message: 1374

Hello all;

It's my first time here and I'm looking for some inexpensive
goodies
for one of my many projects :-)

I'm trying to reconstruct a gutted BC-939-B Antenna Tuning Unit.
I
need L5, L44, C22, C30, SW9, all three counter-dials and the
cover.
The Antenna Current meter (15A) would be nice too (all I have is
a
3A, and it's a bit smaller than the original).

It looks like someone was trying to build themselves a T-network
transmatch out of this, but, as one might expect, with that 96uH
inductor, it didn't work (unless they were shooting for
200-meters). Anyhow, it's a sad, awful mess.

Any help would be apreciated.

Thanks & 73

Topic: 1382  Message: 1384

This is true, however many AM-ers who are HI-FI freaks and trying to have FM broadcast quality signals are not exactly endearing themselves to the ham community with whom they're trying to share the bands. I like AM and I'm all for being considerate with the use of the bands. I never modify a stock transmitter such as a T-368 for "unrestricted" audio and I never got any complaints about audio quality. I can't see any reason why the communications quality 300-3000 Hz audio is not enough for some folks...

My 2 cents' worth...

Another way to get more people interested, is to get whatever you've
got, on the air. I know we all strive to have the best sounding station,
but even if it's merely an HT-37, let's get it on the air. Is there any
one who can get on 40m during the day?

No, not on 7.290 - at least not here in the 5th call area and certainly
not during the mornings and early afternoons, but starting at say 3pmCST
Hell, even fire up the rice-boxes with small amps... 100 to 200w is all
that's needed, locally.

7.285/90 is pretty dead around here from around 3pm till around 5 or
6pm, when VOA cranks up.

Is there anyone who gets on 20m AM? 14.286Mc. I've listened in the
daytime, and don't hear carriers. I know 10m is dead right now, but how
about 15m? I read over on the AM-Window Bulletin Board that there are
people who are getting on 15m AM - 21.420Mc or thereabouts.

Getting ON the air, and making our presence known is one way to gain
popularity. Positive or negative, people will know that AM is not dead!

73 = Best Regards,
-=Jeff/W5OMR=-

Regards,
-Jeff

++++++++++++
And THAT'S why we're going to have 150 checkins for the get-together
at 8:00 PM Eastern tomorrow night on 3.885 MHz!

We HAVE to keep the band going long enough to let the West Coast guys
have a chance at it.

I called the ARRL today regarding minute #64.They said there was no intention to eliminate AM. They are well aware of the interest in vintage equipment. Their concern is the digital modes being operated in the the CW portions of the band.You can call the league at 860-594-0200. See you @20:00 ET on 3885Khz. My T-368 is all tuned up,ready to go. 73 John

# 1391. T-3/BC-610 Net tonight

Lots of static crashes and local thunder in Western
NY, might be tough copy.

Excellent night for a T-368/ BC-610!!!

MY EARS HURT!!

Wow, the static was bad!

BUT that didn't stop the hardcore operators from at least trying.

W3GMS, Joe, from Ursleton, PA was the first contact, he's not on this list but will be shortly. He was an army radio technician who worked extensively on T-368's and has modified them, too.

John K1KHP WAS HEARD IN NYS through all of the crud. Good effort. I couldn't make out what he was saying but his distinctive accent and voice came through so I knew who it was.

W3RC, Bruce in Milford, PA helped hold the frequency even though a fuse in his R-390A decided to fail. Quick troubleshooting on his part and he was back on the air after a while, excellent signal here, good audio. The static was no problem for the operators from Ohio, PA, and Conn. He has replaced the plate relay in his T-3 with a solid state unit, I will post the specs on that when I get more info,..... or he can post pictures of his modification.

K8TV, Ken, from Wellington, OH also showed up with a 1956 T-368C that was brought back from Germany by its previos owner when he found out it was to be scrapped. It has all similar vintage decks except the exciter module.

Also heard were K1EYY portable from Skowhegan, ME and WA1UQM from Simsbury, Conn. who was demonstrating Ham radio to several relatives.

Thunder storms all around, mostly to the north and east. I've got more rain and lightning coming in from Ohio so I will shut down now.

We will try again later in the season, more toward winter.

73

Joe

Sounds like a case of the tail wagging the dog? Shouldn't it be the other way around, that the ARRL and hams have a strong influence with the manufacturers? We should be telling them what we want for gear, not being told what we'll get.

Hopefully this will turn out to be less than expressed, but it wouldn't surprise me if it were all true. I had a chat at a hamfest not too long ago between Mr Frenaye, a dealer, and myself. When I disagreed with their view that we needed to open ham radio up *more* basically by dumbing it down, they weren't pleased. When I mentioned the AM community, Mr Frenaye just rolled his eyes.

There's a reason why some of us refer to them as the Amateur Radio Retail Lobby. The regional manager's remarks would appear to confirm this.

You got that right. We (the hams) should tell the ARRL, FCC and the manufacturers what we want. After all it should be government for the people and by the people. The hams,in this case are WE THE PEOPLE. We can make a difference.

Mike,

Keep the faith and keep looking....the RF ameter is a standard diameter and
if you search the Hamfests...am sure u will find something that will
work...In my experience, it doesn't have to be 15 amps....so if you spot an
eight or ten amp job, don't hesitate to try it... it will get you started and
may be all you need, at least until a bit unusual 15 amper turns up.

Good luck,

Gene

Coil units are as follows for the BC-610 military transmitters per
TM 11-826 dated october 1952:
c-387-d with plug-in vacuum capacitor C28 2.0 - 2.5 Mhz
c-387-d 2.5 - 3.5 mhz
c-388-c 3.5 - 4.5 mhz
c-389-c 4.5 - 5.7 mhz
c-390-c 5.7 - 8.0 mhz
c-447-b 8.0 - 11.0 mhz
c-448-b 11.0 - 14.0 mhz
c-449-b 14.0 - 18.0 mhz

Bob,

In a word - no. The 160 mtr coil is C-454 1.5 to 2.0 MC, and the 75/80 mtr coil is C-388-C 3.5 to 4.5 MC.

Bob,

The simple removing or adding of turns will not work to get where you want to go.

First, the coil spacing is different in each of the different coils produced for the BC-610.

Second, the coupling turns are another matter altogether.

In the case of the 160 mtr coil, C-454 1.5 to 2.0 MC, the main coils them selves have less space between them than their own diameter, the coupling coil is two turns - NON Rotating, and the gap between the two main coil sections is "perhaps" 1/8".

The C-387-D 2.0 to 3.5 MC coil has two main sections of heavier gauge wire with spacing almost equal to their diameter, has a six turn rotating coupling coil, with a gap between the main sections approximating 1/2".

The C-388-C 3.5 to 4.5 MC coil once again has two main sections of a heavier gauge again, has a four turn rotating coupling coil, with a gap between main coil sections approximating 3/4"

You are really going to have to get the real deal.

Quoting WB2FCN, Jim: (With One addition - the 160 mtr coil, C-454 1.5 to 2.0 MC)

Coil units are as follows for the BC-610 military transmitters per TM 11-826 dated october 1952:

c-387-d with plug-in vacuum capacitor C28 2.0 - 2.5 Mhz
c-387-d 2.5 - 3.5 mhz
c-388-c 3.5 - 4.5 mhz
c-389-c 4.5 - 5.7 mhz
c-390-c 5.7 - 8.0 mhz
c-447-b 8.0 - 11.0 mhz
c-448-b 11.0 - 14.0 mhz

c-449-b 14.0 - 18.0 mhz

Bob,

New one on me. Hate to see original 610 tank coils mutilated but don't see why lopping a few turns off each end of a 387 to get up to 75M wouldn't work FB. Wire size and turns spaceing being a little different than the stock 3.5 - 4.5 MHz unit wouldn't make any difference. Might have to take a turn or two off the variable link too but try it and see first (or just use a series cap.).

# 1410. ATTENTION T-368 owners

Yahoo group: T-368_BC-610
Date: 2002-08-25 14:09:16 UTC
From: W2ZR@aol.com
Topic: 1410  Message: 1410

Hi,
In a few moments I will distribute an updated copy of the T-368 registry. Please let me know if any of you have additional or corrected info regarding your rigs. Also, if any of you have a T-368 that's not listed, please send it to me so that I may add your rig.

73,
Steve W2ZR

From: Chuck Strozier
Topic: 1412  Message: 1412

Hi Folks;

I thought it might be interesting to some of you guys to hear from a person who was a T368 & BC610 repairman in West Germany in the early 1960's.

We were stationed near Nuremberg, and had a central operations station with no less than 70 R390's in several bays with a massive antenna field to listen in on transmissions from the "enemy in the East " and follow their military field exercises. We would find a station, photograph it, DF it, and follow it . Most of the traffic was either CW or RTTY in the HF band. We decoded, interpreted, and sent the info back to the States.
In order to communicate this encrypted info from a number of outstations we used T368's & BC610's. Most were found in AN GRC-26's, and some in AN GRC-41's. We even used Jeep mounted T-195's from time to time-boy they were hard to fix! The BC-610's were used in fixed hidden & remotely keyed locations as channel markers, and operated 24/7 with very little maintenance required-and occasional 3B28 would go bad. We got a kick out of watching the cherry red glow of the 250th.@300ma

As I remember , the components that failed to most in the T368 were 3B28's, antenna relays, and multiplier assy. slug coils- probably due to the "knob twister" happy operators who would guess what settings were necessary for different frequencies, instead of using the chart settings. They fried a number of units this way.

My job consisted of being on call 24/7 to repair a down transmitter or any component that failed at one of the outstations-lots of TDY pay! Would not think anything of hopping in a Jeep at 4:30am ,and running down to a location in Southern Germany with a box full of parts, and a tool box.

Best regards, Chuck Strozier Diamond Bar, CA

Chuck,

Adding your story to my T-3 file...

Btw, wonder what the current wisdom is for supporting the antenna relay if it goes belly up...? Probably old info here on the reflector, but have been absent for a time...

# 1423. Impromptu AM Pot Luck Lunch at Butler, PA meet this weekend.

Yahoo group: T-368_BC-610
Date: 2002-09-03 02:37:03 UTC
From: Mark Foltarz
Topic: 1423  Message: 1423

Be sure to join us at Butler this weekend for the
somewhat impromptu AM pot luck lunch.

Look for the white tent, BBQ grill and the little
diesel VW pickup truck. Should be set up in the "AM
row" nearest the airport side of the flea market.

Bring something if you want or just show up.

I fully believe in supporting AM for them.

I have only one concern. Last year they operated in the East Coast area, and CONSISTENTLY ran SSB up on the 40 mtr AM segment. They were repeatedly asked to move down. However, it was ignored and it was almost "intentional" interference.

If that's what we can expect - I won't support them.

If they will honor the "AM Window", I'll light off my BC-610 and the rest of the station and provide 40 mtr AM during the weekend.

From: Tom Smith
Topic: 1427  Message: 1427

Hi,
I have a T-368/C modulation transformer and several pairs of 4-125 and a few 4-400 and 6000s. Also have some spare meters, a vfo and knobs. I recently sold my T-368/C and have my remaining BC-610-E. I would be interested in swapping for some 610-E model iron (I already have a spare modulation transformer for the E) but would entertain other 610 material. All are used except I think a pair of the 4-125s are either NOS or very lightly used. All tested good under operating conditions. Any interest in swaps?? I can provide jpegs if needed.

Thanks,

Tom N5AMA

# 1429. Ideas?

Yahoo group: T-368_BC-610
Date: 2002-09-12 03:15:37 UTC
From: rbethman@comcast.net
Topic: 1429  Message: 1429

Folks,

Would be interested on methods to flip from transmit, I.e., a T-R relay, or method of muting the receiver when going to transmit. I'm still doing the old methodology, flip receiver to stand-by, then going into transmit mode with the BC-610.

Somehow there HAS to be a better and smoother way.

Ideas? Suggestions? Solutions you use?

TIA!

All of the details of the way that it was originally done are in TM 11-280
and TM 11-281. Will work fine with the original receivers (BC-312/342,
OA-65/MRC-2 or R-336/GRC-26), as well as most Navy sets. TM 11-281B shows
the slightly different approach used with the R-388, which should also work
with an R-390 or R-390A and I think with any of the Super Pro models
(110/210/400/600 and military nomenclatured equivalents).

I use the BREAK-IN circuit on the R-390A for muting
the receiver when transmitting on the T-368. It
grounds the antenna inputs and both audio amp inputs.
You still need to reduce the RF GAIN somewhat. All
that is required is to find a point on the transmitter
circuit where there is a relay with a set of dry
contacts that can ground the terminal labeled on the
back of the R-390A when transmitting.

++++++++++++
Because the T-3 has no way to adjust the bias of each
tube you would have to use balanced 4-125's or install
a circuit that will allow seperate bias control.

Other on the list have the information and schematic
to do this. N2BC? Are you out there?

All,

Over the years I've mixed old and new 4-125 modulators and mixed brands too. Never found balance to be a practical problem unless, of course, one tube was totally dead or almost so. In fact, a useful measure of negative cycle loading can be achieved by putting a weak tube on the side that controls the negative excursion of the modulated waveform.

A quick and dirty check on balance can be done by taking the back off the T-3, keying the rig into a dummy load while setup for AM, backing down on the modulator bias and noting whether or not both tube plates begin to show color at the same point. If not, the stronger tube would likely be the one that lights up first. HV exposed here so take appropriate precautions and there's an interlock on the back cover that will have to be bypassed to do this.

Gents,

Time recently is at a premium, but have used the approach of bringing out the 120 vac to the internal relay and am setting up an additional multi contact external to handle muting ... will do some daisy chaining to do both mil recvrs and Ham types, depending on mute system/grounding needed. Also planning to cut audio line with relay and possibly run a pad to open it a bit if possible for local monitoring...

Status...120 has been brought out and am struggling for time to mount relays on 19 inch rack control center...Whew...now to fix a dead BFO on my R390A...it just never ends...

73 to all es enjoy catching as many of the postings as possible...

# 1441. Bird slugs for sale or trade

Yahoo group: T-368_BC-610
Date: 2002-09-24 09:43:17 UTC
From: rbethman@comcast.net
Topic: 1441  Message: 1441

I have the following Bird Slugs for sale or trade, reasonable offers, before they go to the "E" place:

1 ea 50W - .95 to 1.26 GHz

1 ea 25W - 1.7 to 2.2 GHz

1 ea 10KW - 0.45 to 2.5 MHz

All are VERY clean and in VERY good condition.

Please E-Mail Direct.

Bob - N0DGN Craf-T-Bob (mywebpages.comcast.net/rbethman/)
(Because I love Hallicrafters!) R-390A EAC '67, R-390A Collins '52, BC-610I, BC-939B, and BC-614E

# 1450. Re: [T-368_BC-610] An Tuna Tinner!

Yahoo group: T-368_BC-610
Date: 2002-10-05 02:43:19 UTC
From: James M. Walker
Topic: 1446  Message: 1450

Ah,
Actually, as for the type of antenna tuner, it works 2 - 18 MHZ into a 5 section whip antenna MS-115 through MS-117 making the length about 13 foot long. The recommended Long Wire length is 44 foot and the BC-610 transmitters will work into a dipole (50 ohm coax) cut to the proper length without the tuner in the line. Your mileage may vary!

As for the unit displayed it is missing the input (to the coupler) insulators and the coax that feeds the input variable coil seems to end at the bottom of the chassis! The input tuning coil KNOB is wrong for both types of couplers as the thing turns like an 18 wheeler unless it has been cleaned and lubed. All the ones I have turn stiffly even after cleaning and lubing. The color indicates that it MAY have been used in Air Force service, it is blue, not blue-gray (ala T-368) not black (ala BC-610) so may have been repainted by someone along its' journey.

I used one in a mobile configuration, using the 13 foot whip mounted on a van and running a Eico 753 on 80/40/20 meters. Actually tunes quite well
and gets out quite well also. When using it in a long-wire mode it is advisable to have an 8 foot ground rod and a short connecting cable to the
rod and the case of the tuner (For ground). Then the unit is a great performer. I use one here from time to time, and get great results!

# 1452. BC 939 antenna tuner

Yahoo group: T-368_BC-610
Date: 2002-10-05 03:10:12 UTC
From: k1khpjohn
Topic: 1143  Message: 1452

By adding shunt capacity from output to ground this tuner can become very versatile. Value ranges from 25 to 400 pf. or so. In the low range I added 300 pf. and on the high range I added 50 pf. I used 15 kv. doorknobs internally mounted but an externally connected variable would work fine. I use a 21 ft.side mounted marine antenna (Morad WH-21)about 8 ft. from the tower, 15 ft. above the ground. The feed to the coupler is about 15 ft. long. In low range I can tune 80 and 40 M. It's down 2 S units from the G5RV. In the high range I can tune 20 thru 10 M. It equals or surpasses the G5RV. I have 8 - 8 ft. ground rods at the base of the Rohn 45 tower and some ground wires bonding other antenna supports and towers. The purpose was to provide a secondary antenna for the higher bands. I plan to try improvements on the ground system. I may try a couple of elevated radials.

Well, that may depend on the definition of "long wire." I know about the switch position labeled as such but in a good afternoon's worth of trying I couldn't get a match into a 120 ft. piece of wire on 75 or 40M with the thing with any combination of switch or inductor positions. In the long wire switch position, in fact, the tuner is configured as a series tuned circuit (C30 in series with L6). From this it would appear that "long wire" meant something near a quarter wavelength, 65 ft on 75M for ex.

Yes but the manual for the BC-610 tells you how lon the wire needs to be
it calls for 40 - 44 feet and I use 44 here and they tune great with the
coupler, however the ground system is very important. even it the van
the
ground is to the frame of the vehicle and the coupler tunes a 15 foot
whip
as well no coils outside the vehicle to break or otherwise damage!

Well, yes, as I said before it all depends on what one calls a "long wire" (TM 11-281 for the SCR-399 gives a range of 25 - 100 ft BTW, and also lists 15 and 25 ft. whip lengths). A "long wire" antenna is commonly understood to be multiple wavelengths long at the operating frequency. Not trying to split hairs here, but only point out that these tuners were designed for a specialized purpose and are not particularly well suited for general ham use. My friend John, K1KPH who just responded to this thread reports good results by shunting capacity to ground across the output terminal. What he is doing here on 75 and 40M is implementing an "L" network which would work very well with end fed wires near a half wavelength long or multiples thereof. Certainly a worthwhile thing to do, John, since you already have the tuner but there are far less bulky ways to come up with a simple "L" network.

Right you are, Dennis.

I run an inverted L on 160 (a 3/8th WL one) with a little extra outboard capacitance. I also sometimes use an 80 meter dipole with the feeders tied together (against a 160 radial system, of course) and it tunes just fine with a Nye Viking MB-V-A.

HOWEVER, there is nothing quite like the nostalgic thump my heart gets from my SCR-499 lash up which includes a BC-939.

I had to (sadly) leave my HO-1 housing unit up in Alaska, so I'll not be able to enjoy the SCR-399 anymore. The SCR-499, however, is a fairly satisfactory substitute.

Oh, the joy of a military station sans the military.

Date: 2002-10-09 18:54:56 UTC
From: John Page
Topic: 69  Message: 1464

Hello to all. I am new to this list and have just gotten a T-368C. It was built by B&W. It is serial num 10. It is now on the air on 3885 and really seems to work well. Never had anything like this before and I really think I am going to enjoy this. Receiver I am using is a R-390A. Also the mic I am using is an amplified D-104
Question---I would like to cosmetically restore the exterior as it is a bit rough. It has different colors of gray paint and a lot of scratches and chips. I wouldn't have any trouble painting it but how would I relabel the panels???
Also, I have one front panel bolt that wont come out. The captive nut in the rear has come loose and just spins. Any ideas??? Or do I just have to drill the head off? It is on the lower left of the Mod deck. I need to get in there and repair the cable from the front mic jack to the carbon mic gain pot. Guess I could pull the power supply and lay on my back with my head under the Mod deck and fix it that way. Then again, maybe not :-\.....Thanks in advance John, K4KWM

Also, I have one front panel bolt that wont come out. The captive nut
in the rear has come loose and just spins. Any ideas???

Hi John,

Maybe grab the bolt head with a pair of vice grips - pull towards you and
turn - maybe the nut will hang up on something.

Good Luck!

# 1466. CU-45/MRQ-2 Antenna Coupling Unit

Yahoo group: T-368_BC-610
Date: 2002-10-10 00:55:32 UTC
From: R.J. Mattson
Topic: 1466  Message: 1466

I have a Signal Corps, US Army CU-45/MRQ-2 Antenna Coupling Unit. Made by B&W Ser# 52
It looks similar to the TN-339 that just sold on e-pay.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1385346203
Was the CU-45/MRQ-2 also for the BC610 and/or T368?
Regards,
Bob Mattson...W2AMI

Actually,
if it is on the mod deck and the upper bolt you can remove the rf deck,
use a crescent wrench on the nut that is in the "Blind fastener strap"
use the large allen wrench to turn the bolt from the front. The crescent
wrench shouldn't move you just need to hold it steady and turn the bolt
from the front. Apply some liquid wrench to the bolt and the nut before
performing this operation. Unless they are cross threaded, they should
come apart easily after the liquid wrench has had time to work its
magic.
the blind fastener, can be reinserted after the operation allows you to
remove the mod deck. If the bolt is the lower one remove the power
supply deck, don't have to pull it all the way out unless you want to.
If you do just pull forward by the handles after removing the connectors
and let it rest on the floor leaning against the transmitter rails.

Congrats on the rig, John - and welcome to the list. You'll find an incredible wealth of information here from users as well as those who serviced and used them in the military. I'm still living in T-3 envy, but recently my two buddies who were looking ended up with their T-3s, so I must be next in line.

Enjoy!

Did anyone save the picture(s) from that auction? (I was away and missed them.)

I have one of these things, and I wonder if there they can be modified to
match more normal loads. Has anyone done that?

Roy

Roy there was some comments earlier that using a shunt capacitor to ground
will load
various antennas. I have one of the units and am really impressed with the
quality
of construction.

# 1473. Speech Amp/Modulator/PA help needed:

Yahoo group: T-368_BC-610
Date: 2002-10-22 02:09:51 UTC
From: yardleyite@aol.com
Topic: 1473 Message: 1473

Hello Everyone, My name is Joe Cro - N3IBX; and I'm new to the group. I ran into a few friends and fellow T3 owners during the past weekend and thought it would be a good idea to join the group. I acquired a T-368-E (serial #265) about 5 weeks ago and it has a problem that's been driving me crazy. Could I possibly ask the group members for some advice? Any help will be greatly appreciated. Here's the problem: I have a pronounced squeal and a very low audio level when trying to adjust the modulator bias on my T3. The microphone is the MC-29 handheld carbon mike. I don't get a squeal when I have the bias control either completely off, or set very low like 10ma or so. It will modulate but with very low and distorted audio. When I try to adjust the mod bias to it's recommended 50ma. I can hear an internal squeal coming from somewhere in the PA deck, and the mod bias pins the meter. It also has a hum like it's not getting a good ground, and It seems as if it won't stabilize at it's recommended 50ma. and sometimes goes full scale on the meter When I unkey the mike while having the bias set very low, it'll jump up to about midrange on the scale, then come back down. The most confusing part of all is that after I have the set on for about 20 minutes or so and play with the carbon mike gain control it'll stabilize and I'm able to adjust it to it's proper modulator bias. This won't happen all of the time, just 8 times out of ten. The audio output is good with little or no distortion when I'm able to adjust it to it's proper level. To my knowledge the set is completely stock without any additional modifications done to it. For the record, I have my plate dipped at about 225 ma. and loaded somewhat on the lighter side. I currently have it on 160M; but I've tried it on other bands and it does the same thing. Has anyone else in the group encountered a problem like this? Any advice will be greatly appreciated. I hope to get it on the air soon and make it my main station transmitter coupled with a R-390. Thanks for the bandwidth and best regards, Joe Cro N3IBX Joseph Cro N3IBX Collins, Heathkit, Hallicrafters Drake, National, and General Boatanchor language spoken here: N3IBX Basement of Boatanchors (http://hometown.aol.com/yardleyite/index.html) N3IBX Boatanchor Website (http://members.aol.com/yardleyite/collect/index3.htm) N3IBX AM Studios: (http://www.geocities.com/n3ibx/N3IBX.html?1000084610680) Collins Radio Association Member # 122 AM International Member # 1280 [Non-text portions of this message have been removed]

Hi Joe, Welcome to the party! Yeah, the T-3 is prone to ultrasonic modulations, or something like you have. I had a case of that, too. What I found is about what you're headed toward, loose grounds, mainly at the mike connector on the Mod deck panel and the coax connector at the speech amp. The speech amp connector is not easy to get to, there is a big nut in a tight place under the chassis, jam it from turning with a big screw driver against the side of the chassis and turn the top part. While you're in there tighten all of the other grounding connections, too. There will be other loose ones! Don't forget the screws that hold the tube sockets, too. Also, be aware of any gunk, MFP, or rust between the ground connections and the chassis. I'm not saying this is definitely the problem, but its an easy first place to look, it seems that a lot of ground screws work loose from the vibrations of the blowers or from handling the decks. 73 Joe KG2CI --- yardleyite@... wrote: > Hello Everyone, > My name is Joe Cro - N3IBX; > and I'm new to the group. # 1476. A newbe guy is on the list.....

Yahoo group: T-368_BC-610
Date: 2002-10-24 01:44:38 UTC
From: Tom Siglin
Topic: 1476  Message: 1476

Greetings to the group.

Thanks to Roy Morgan for his help in letting me know about the list and to Joe for permission to join.

I'm an owner of a BC-610E of dubious heritage (no serial number plate). It was purchased from Fair Radio Sales about eight years ago and recently auctioned on eBay. The owner was kind enough to drive it up from Phili (PA) for a reasonable price.

To date I have ~300 Watts of RF available and find work on the modulator will be needed. The 866's have been subbed with solid state for now as the tubes were complaining too much. I also installed screw-in circuit breakers rated at five Amps under the original size fuses for testing purposes.

Because of paint color and textures of the case, I suspect this rig may have been assembled from at least two runs. No proof, just

While the rig came with three tuning units, the choices were not very useful. (4 - 5 MHz, 5 - 6.35 MHz and 12 - 18 MHz) My coil selection is improving daily with 2 - 18MHz less the 3.5 - 4.5 coil. I have an extra 2 - 3.5 and 11 - 14 set. (Any trades????)I'd like to get a coil for 160 or may have to build one...

I was able to get a really nice shot of the final and posted it along with a shot of the transmitter front at: http://www.geocities.com/tsiglin Your welcome to grab a copy for a background if you like.

Tnx & 73's, Tom - WA2LTD

From: W2ZR@aol.com
Topic: 1477  Message: 1477

Hi Gang,
In a little while, I'm going to distribute an updated version of the registry. I've decided to reverse the order of the rigs in the registry so that the newcomer is at the top of the list and you won't have to scroll down to see who just joined the ranks each time.
There are now 76 rigs registered representing 9 different manufacturers. If anyone meets T-3 owner who's rig's not registered or isn't a member of this group, please invite 'em to join! The more, the merrier.

73,
Steve W2ZR

Hello all,

I have a modulation transformer from an HT-4. It has one terminal broken off below the surface of the case. I wonder if anyone has repaired such a thing.

Maybe a trip to Peter Dahl would be in order for this thing.

Dennis,

I have two full sets of coils.

I was trying to provide advice to another gentleman.

I have the MOD package 160 mtr coil, then the standard ENTIRE military issue set.

The only thing I don't have - a MESS of crystals, and a MESS of tuning units.

The Tuning units I do have cover 75, 80, 40, and 20 mtrs. I haven't tried modifying Tuning units ot PA Coils to get on 10 meters - YET.

# 1486. Digital frequency control for the BC-610

Yahoo group: T-368_BC-610
Date: 2002-10-26 18:59:02 UTC
From: Tom Siglin
Topic: 1486  Message: 1486

Greetings Group,

Did some initial tests of feeding in external low level RF to the BC-610 for easier frequency control. Thought I would start out feeding the xtal socket from my Kenwood 570.

The initial test worked out pretty well. Set the kenwood for the lowest RF output (5 Watts), into a dummyload to keep the 570 happy and then to the Xtal socket. (hot to the right side, grounded the shield to the TU. (did not use the left side of the socket as it was not RF ground)

I think in the long run, I would like to bypass most or all of the TU function to make tune up almost effortless. That will take a bit more power and a matching network, probably a torid for Z matching and some swamping?? (Then feed the 250TH directly)

(My reason to use this method is the lack of tuning units but a good supply of coils)

Any Thoughts..........

Tom - WA2LTD

# 1487. Re: [T-368_BC-610] Digital frequency control for the BC-610

Yahoo group: T-368_BC-610
Date: 2002-10-26 19:05:28 UTC
From: James M. Walker
Topic: 1486  Message: 1487

Hi Tom,
Jim WB2FCN here. I use a PTS-250 to drive the xtal socket on my "Beast" from time to time, like when running CW. The BC-610 "if using the TU" requires that the drive level be around 1 watt and that the hot side go to the 6V6 grid through a cap I think 4uuF I can check when I go back to the shack to be certain. The ground side is fed to the 6V6 circuit also and it is correct that it is above ground for RF at that point.

The input frequency for all operation is fundamental freq only, as in for 80 meters 3500 xtal is also operating freq. on forty 3500 xtal is 7000 operating freq. so for say 7290 the input is 3645 KC the oscillator get strange if you overdrive it at the 7290 freq and want to use it you get low output from the following chain.

I have subsequently acquired a PTS-040 which does up to 40 MHZ and will be using that to control frequency on all bc-610 rigs here.

The input to the xtal socket is covered in the O-39 FSK unit manual.

Joe - It is from a BC-375 or some such.

What TUs are you looking for?

Have you checked with William Howard? He has some that a Russian left for him to sell. While I don't remember them being on the ham bands, my experimentation with padding a TU to hit 160 shows it is easy to move them where you want them.

# 1489. WTB/WTT 100 mmf 20KV vacumn cap

Yahoo group: T-368_BC-610
Date: 2002-10-27 23:36:38 UTC
From: Tom Siglin
Topic: 1489  Message: 1489

In my continuing quest toward VLF,(actually 160 meters) for the BC-610, I am looking for a 100 mmf cap. I have lots of the 50mmf @ 20 kv if a trade is possible....

FWIW: With the lack of tuning units for the low end, I drive the BC-610 from my Kenwood 570 through an MFJ antenna tuner. Drive requirements from ~20 to 40 Watts depending on band. The tuner is connected to the coupling cap on the 807 side of the 250TH grid circuit. The exciter rectifier and TU are removed for this test.

As per some members thoughts, a link coupled, tuned input method is likely the way this will end up in the long run....Maybe with a bit of swamping to widen out the bandwidth??

# 1490. T-368 T/R relay help requested:

Yahoo group: T-368_BC-610
Date: 2002-10-30 17:32:39 UTC
From: yardleyite@aol.com
Topic: 1490  Message: 1490

Hello All, I just about have all of the bugs worked out of my T368-E, and should be ready to put it on the air shortly. I have the original vacuum relay/TR switch and am awaiting documentation for that through the generosity of one of our group members. In the meanwhile, I have a number of 12VDC and 26VDC "Dow-Key" type TR switches I could possibly try it out with. Has anyone tried such an arangement and if so, how did it work out? If possible, could you let me know what connection points (numbers) inside it would connect to? Would there be any danger in harming the control circutry transformer (T1) ot anything else by doing this? Any information will be greatly appreciated! 73 de Joe Cro N3IBX Joseph Cro N3IBX Collins, Heathkit, Hallicrafters Drake, National, and General Boatanchor language spoken here: N3IBX Basement of Boatanchors (http://hometown.aol.com/yardleyite/index.html) N3IBX Boatanchor Website (http://members.aol.com/yardleyite/collect/index3.htm) N3IBX AM Studios: (http://www.geocities.com/n3ibx/N3IBX.html?1000084610680) Collins Radio Association Member # 122 AM International Member # 1280 [Non-text portions of this message have been removed]

Tom, I greatly appreciate the information you gave me. I neglected to mention that I do have a schematic up to a T-368-C that had the old style relay. I do have one coming from a Listmember from an "E" variant with the vacuum relay. Regarding Surplus Sales all I can say is "they don't need a gun" - hi hi! I called them up for a suitable relay and started to tremble over the price they quoted me. I'll probably use the 26VDC dow key (hopefully) with the T-3 until I can hook up the vacuum relay. I may however have a strange 30VDC cousin that may work out for you. I don't think it has a set of external contacts but I have a "Dow-Key" parts stash I'll look through to see if I have something you could use. I'll let you know off list what I can find. Thanks for the reply! Hello all Groupmembers, I'm trying to figure out the T/R switch arangement with my T-368-E. Would anyone know what two terminals on the terminal board, left side of the transmitter case supply 26VDC for connecting an external T/R switch I have a number of 12VDC and 26VDC "Dow-Key" type TR switches I could possibly try it out with. Has anyone tried such an arangement and if so, how did it work out? Would there be any danger in harming the control circutry transformer (T1) or anything else by doing this? I would greatly appreciate any information or tips on how to set this up. I'd love to tryout the transmitter on the air this weekend. Best Regards, Joe Cro N3IBX Any information will be greatly appreciated! 73 de Joe Cro N3IBX Joseph Cro N3IBX Collins, Heathkit, Hallicrafters Drake, National, and General Boatanchor language spoken here: N3IBX Basement of Boatanchors (http://hometown.aol.com/yardleyite/index.html) N3IBX Boatanchor Website (http://members.aol.com/yardleyite/collect/index3.htm) N3IBX AM Studios: (http://www.geocities.com/n3ibx/N3IBX.html?1000084610680) Collins Radio Association Member # 122 AM International Member # 1280 [Non-text portions of this message have been removed]

Recently several ISP's have installed firewall systems that are causing the posts from this and other E-mail mailing lists to be bounced back as undeliverable due to possible security problems.

So, if you haven't been getting posts from some of your E-mail lists maybe your ISP has started bouncing them.

Ron,

You "just" never know.

I've got two Full sets of the 610 coils, including the notoriously difficult to find B&W 1.5 to 2.0 Mc.

All I need are MORE crystals - So I can move them to ham band freqs.

And definitely more TUs!

(Yep! Have plenty trading material. Also looking for spare 100ths, and 2A3s.

# 1500. Back panel of BC-610I

Yahoo group: T-368_BC-610
Date: 2002-11-07 03:01:35 UTC
From: rbethman
Topic: 1500  Message: 1500

Hello All,

I have a 610I minus a back panel.

The TM is not of much use as it does not give part numbers for panels or "cabinet" features.

I can deduce from the TM that the "E" model has a fixed upper section that has holes for convective air flow. The same method provides me with the "idea" that an "I" is "most likely" a singular solid piece from top to bottom with no "fixed" portion.

Can some of you 610 owners give me some input?

1) Is my assumption of the "E" correct?

2) Is my assumption of the "I" correct?

I am going to "assume", so far, that this is correct. That being the case, I can procure either a steel or aluminum plate, I'm going to "guess" at 16 ga, and cut to fit with holes in the upper segment for the PA deck to breath through convection.

A) Are the back panels "perforated at the modulation deck level also?

Back to scratching head and trying to solve this. Obviously without a rear panel I'm going to have RF in the Shack. That is NEVER a wonderful thing.

Bob - N0DGN

P.S. How about a list message with BC-610 registry info? I only see them occur for T-368s. With a registry listing, perhaps I can converse directly with an "I" owner or two.

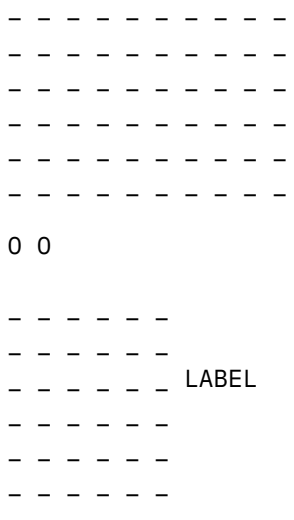
From: Tom Siglin
Topic: 1500  Message: 1501

Hi BC-610 Fans,

The hallicrafters movie at
http://www.archive.org/movies/details-db.php?collection=prelinger&collectionid=07951b
shows the back of the transmitter about 5min, 38 sec
into the film.

It shows an upper portion of the back with an array of
10 groups of slotted vents similar to the front and
sides all accross the modulator section. For the power
supply, the right third is un-slotted with a
schematic(?) covering this area. The left two thirds
is slotted
with 6 groups of slots.



Hope that helps..... Tom - WA2LTD

# 1503. Re: [T-368_BC-610] Back of BC-610 as shown in halli movie

Yahoo group: T-368_BC-610
Date: 2002-11-07 06:57:35 UTC
From: rbethman
Topic: 1500  Message: 1503

I can see now that the "early" BC-610 models, as shown in the AVI movie had the PA deck installed as a separate top section on top of the remainder of the chassis.

The BC-610(I) is built differently.

there is a frame of four corners, a front panel, the side panels, and finally a back panel. Each of the decks is bolted into the four corner frame pieces. The front panel is connected to each deck by terminal strips, as are interconnecting deck cables.

There is NO one piece PA deck that simply bolts on to the top of the radio, with integral back panel.

So it appears that my assumption was correct. The "I" is a different animal. My back cover will indeed be a single piece, or a couple of pieces.

I "could" find some copper screen, solder all around the edges, and screw it in place as the "probably" easiest and cheapest method. Provides RF containment, AND PLENTY of ventilation. Although I find that it really doesn't need ventilation. It certainly DOESN'T need any fans. It never gets that warm.

NOW - to keep hunting Tuning Units and crystals. I have PA coils to trade for them!

Mike!

Why is your BC-610 rather "decrepit"?

Come on now, let's get to it!

We can't let them die!!!!

If you MUST, get it to a GOOD home!

Bob - N0DGN
(look at mywebpages.comcast.com/rbethman) Got to work on the page more. Use smaller pics and show the back end. It was VERY lovingly restored by WB2FCN. Gorgeous! Looks like new, except for one spot where it appears an acid or alkali was dripped on it.

From: Jim DiMauro
Topic: 1509  Message: 1509

Hello All:

I'm considering hunting for a BC-610, but first I need to do some research. I've done several web searches, but I've found very little on the '610. Hopefully someone on this list can point me to some material. For starters, where can I find a description of the various models of the '610 (BC-610H, I, etc.)? I'd like to know basically what the major differences are, both electrially and styling-wise, and approximately what years each model series was produced. Is there a site somewhere that will have this info? Thanx!

73,
Jim
WA2MER

GOOD!

Then it is useful to someone. The only bad points are
that it is in Italy! And he doesnt' take Money
Orders.

Don't forget to check his "other auctions" as he has
other tuning units, and more good stuff.

Um,.........

If you put Italian tubes in your modulator deck does
it affect your accent on transmit?

Joe

Joe,

I bought two TUs from a fellow in Italy.

One was also a TU-47. The only problem I had was that they had sat in storage too long. I had to soak the shaft bushings in DeOxit for a few days before you could turn the shafts by hand.

The guy was straight - packed good - and shipped on time! If this guy has "rbethman" in his feedback - he's the one! It would have been back around April to June.

Subject: [Boatanchors] Meissner Signal Shifter Users?
Date: Wed, 13 Nov 2002 09:27:52 -0500

I've just recently obtained a Meissner Signal Shifter (SN# 4883) and have a few questions concerning it. Is there anyone out there that is currently using one of these old beauties that would care to exchange a couple of emails with me, until I get this one up and running? If so, please reply direct...

Thanks in advance.
Tony, W4FOA

# 1517. T-368 RF deck modifications

Yahoo group: T-368_BC-610
Date: 2002-11-18 01:33:29 UTC
From: -- KK4DF --
Topic: 1517  Message: 1517

I am looking at doing the RF deck modifications recommended on the AM Window site at:
http://www.amwindow.org/tech/htm/t368.htm

I have no problems with the changes to take B+ off the tank coil, adding a coupling cap and a bypass cap and a new choke and grounding one end of L3. A few items in the RF deck modifications schematic confuse me:

1. L3 shows up twice in the modifications schematic. The one in the lower right-hand corner seems to be L10. I think this one is just mislabeled, and should read L10 instead of L3.
2. There is a 500pF cap replacing a 2200pF cap (C5) that bypasses the 4-400 screen grid to ground. But there are also two more 500pF caps in series that bypass the screen grid of the clamper tube to ground. And the screen grid of the 4-400 and the clamper are electrically tied together. Is there some reason for separate caps to bypass RF locally at each location? I'm guessing this is because there's too much distance between these two locations to get an effective RF ground without grounding at both locations.

Has anyone else on this list done these modifications? Please comment regarding the success of these, especially the impact on audio quality.

I'm also considering taking B+ off the plate current meter, and turning it into a cathode current meter.

Thanks,
Walter Wilson - KK4DF

Hey!

What are you trying to pull here?

We've got the whole thing in the files section of the
homepage for this very list. Its an excellent thing!
Done by W3NP, Dave.

There are even pictures!!

Go take a look and comment at will, your input will be
very helpful.

It's approximately here:

http://groups.yahoo.com/group/T-368_BC-610/files/

Don't forget to look here, too:

Walter,

Good questions. First, the RF choke labeled L3 on the antenna output is certainly L10. As far as the rather odd arrangement of 500 pf caps in the screen circuit, I suspect these were what Tim had on hand so that is what he used. A large value of screen bypass will adversely affect high end audio response. Tim may have found (or worried) that going from 2300 down to 500 pf was too much so he added some additional bypass for "good measure" later. Doing this out at the clamp tube is easier than opening up the PA chassis to get to the 4-400 screen pin.

The B&W 800 does not have enough inductance for this application and will get warm on 75 and hot on 160M. There was a thread on this a while ago. The Yahoo web site listed by Joe ( http://groups.yahoo.com/group/T-368_BC-610/files/) gives one solution to this problem. Whatever choke you use in the plate circuit, make sure it exhibits no series resonances on any of the frequencies on which you plan to operate.

FWIW,
Regarding plate chokes.
I didn't have time to home-wind so I used a $25 commercial choke.
The RFC-3 worked out well, it can be installed easily, adjacent to the 4-400.

Sounds like the perfect solution to me.

Incidentally, I opted for a simpler modification in my T368s. Noticeable top end improvement can be achieved by merely reducing the DC blocking capacity in the middle of the Pi-L tank circuit to .001 mf and doing the same to the RF bypassing on the incoming HVDC line. The tuning on 160M is affected somewhat with this mod but there is no apparent affect on output or efficiency. Reducing the value of 4-400 screen bypass cap would probably provide additional improvement but I haven't tried this.

I also have not changed the screen bypass.

At first I ran with the way you mention as a way of decreasing capacity. I ran it that way for a year and it worked well. Unfortunately the doorknobs that I used to replace the DC blocking capacity would slowly heat and change the tuning. Re-configuiring things (eliminating the doorknobs) and taking HV off the tank solved an intermittant (and frustrating) zorch problem, stopped the heat related tuning creep and I also noticed slightly sharper tuning.

BTW I now tune 80 meters by using the 2.0-3.0MHz range.

Lots of cool ways to do the mod !

Regarding plate chokes.
I didn't have time to home-wind so I used a $25 commercial choke.
The RFC-3 worked out well, it can be installed easily, adjacent to the 4-400.
http://www.rfparts.com/choke.html#plate

Sounds like the perfect solution to me.

Incidentally, I opted for a simpler modification in my T368s. Noticeable top end improvement can be achieved by merely reducing the DC blocking capacity in the middle of the Pi-L tank circuit to .001 mf and doing the same to the RF bypassing on the incoming HVDC line. The tuning on 160M is affected somewhat with this mod but there is no apparent affect on output or efficiency. Reducing the value of 4-400 screen bypass cap would probably provide additional improvement but I haven't tried this.

Tom,

I tried connecting the bottom end of that 80K screen dropping resistor to the modulated HV line a while ago. Gave some additional improvement on the top end of the audio range but nobody could tell the difference on the air so I returned to the stock circuit. Sometime I want to try connecting a 500 pf or so cap from the screen over from the modulated HV and see what this does to the upper end of the audio range.

Yes, one would want to use a cap with sufficient current carrying capacity here. I was luckey to have a .001 unit the size of the .0039 monster found in later models and have experienced no heating problems. I have never had any arc-over problems in my T3s even though these are frequently reported by other users. I wonder if only certain models are prone to this. Mine are older units (a Basic and a C).

> BTW I now tune 80 meters by using the 2.0-3.0MHz range.
>
>
Interesting. Is this a consequence of the modification, or will unmodified sets work this way too?

Sometime I want to try connecting a 500 pf or so cap from the screen over from the modulated HV and see what this does to the upper end of the audio range.

Would like to hear how that works out.
The other one I am curious about is negative cycle unloading that was documented in the January '95 Electric Radio. Its on the list of things to do.

have never had any arc-over problems in my T3s even though these are frequently reported by other users. I wonder if only certain models are prone to this. Mine are older units (a Basic and a C).

Dont know... Mine is an F, or at least thats what the data plate says. It has some frankenradio traits such as an early speech amp and modulator deck dated in the '50's. Much of the RF deck is date coded from '67. It does not have ceramic variables. I never did find the source of the arc. It would trip the overload and then be happy for an unpredictable time.

BTW I now tune 80 meters by using the 2.0-3.0MHz range.

Interesting. Is this a consequence of the modification, or will unmodified sets work this way too?

My unmodified T3 worked and tuned by-the-book. Only after modification did 80 reside on 2.0-3.0 MHz. 160M is normal. In both cases the tuning and loading curves in the book no longer apply. Tuning is much sharper also. I used to have a very broad peak in stock form which made tuning in the low power mode inaccurate. Now, since the mods, the resonant peak is very sharp and identifiable. I have not tried the rig on 40. Overall, I must say that the mods to the RF deck have made my T3 a much more civil rig to tune and operate.

These are at Fair Radio, the "USED-POOR" ones are a great deal, they work!! Just ask N2BC.

The gov't reconditioned ones come sealed in the metal envelope. They look NEW!

Joe

ME-165/G STANDING WAVE-RATIO POWER METER , designed for use with T-368 400 W transmitter; used 12/ 600 ohm 50 W non-inductive resistors in parallel to provide 52 ohm 600 W load with SWR of 1.1:1 of less upto 30 MHz. Has 0-600 Watt meter, function switch Power-Adjust-SWR-Operate, & N connections. Flanged on back for wall mount.
1.5x9.8x9.8, 20 lbs. GOV'T- RECOND, $125.00;
ME-165/G USED-GOOD-looking, complete, $45.00
ME-165/G USED-POOR -looking, complete, $25.00
Manual, repro $8.50

Here is a heads up:
1) New or reconditioned units are available from time to time for 30.00.
2) the full manual (TM) is available for download at the ETM site which
is
http://www.logsa.army.mil/etms/find_etm.cfm
3) the unit WAS designed to be highly accurate up to 22 Mhz ONLY.
4) If it is setup according to the TM and properly connected in a system
it is just as accurate as a Bird wattmeter.
5) The unit will handle 400 watts continuous, and 600 watts
intermittently.

Hi Gents,

Don't get much time these days for work on the station . . . but can report the Me165/G is an excellent pice of gear...got my first one from Fair a few years ago...new inbox...and it's connect in line with antenna line to Johnson Matchbox ... it allows plenty of time for lots of 'key down' time at 450 watts indicated...Second one came from a flea marked and is also in new condx...the second on is on my bench and in more or less regualar use for rehab and building projects...

Thought about adding a fan to it once...but seems to be doing just fine as is...

Re current price and availability ... last one I saw was at the Cleveland Hamfest this past fall...it had a few battle scars...paint was chipped here and there...but was otherwise a good looking unit. Seller was "asking" $ 65.00...Don't know if it sold...

73 es good hunting...

Got a T-368 exciter and wanting to use it to drive Viking II-CDC on the WARC bands.
Heard there is an article in Electric Radio (Number 21) on this item. I subscribe to ER
but started post-21. If anyone has Number 21, could they send me a copy of the
article or at least look it over and let me know if it's worth looking into? Naturally, will
be willing to cough up whatever copying/mailing costs might be. Better still, is there
a URL for any sites that might have old ER's online?
Pls reply to my home address of --- penguino@... ---

# 1541. Smoker T-3

Yahoo group: T-368_BC-610
Date: 2002-11-29 22:26:07 UTC
From: billn2bc
Topic: 1541  Message: 1541

Got a smoker T-3 here... not me, the T-3. Thot I'd spin the beginning of a yarn for your holiday enjoyment while I relax some tired muscles.

A few days ago I thot I'd hook up the T-3 in prep for some serious gabbing this weekend. Fired it up - sorta literally. Powered up, CW, key continuous, Plate sw on but HV breaker off, listening around for it's 'spot' signal. Nuthin' Ahhh... let it run for a while, Key normal, Plate sw OFF.

About 30 minutes go buy, I hear a sizzle... Copius amounts of white smoke, first from the center top of the RF deck, then from the center top of the Mod deck. Quick shutdown, pull the mod deck out a bit, looks like the smoke is from below the mod chassis, but hard to tell.

So today, I took out the mod deck, then the RF deck, then the backbreaker deck - expecting to easily spot something torched.

WRONG. Nothing obvious. Ohmed out all the basic voltage busses, all look reasonable.

Lug the darn things back into place, cable it all up. No workie, big surprize - but no smoke either. I still can't 'hear' the exciter at all. Hmmm... the PTO VR tube ain't VRing. But I can tell that there is at least low B+ somewhere becuz the keying delay relay is working.

Enter my pal Murphy. The low B+ from the Mod deck to the RF deck wasn't making the trip. I metered the cable between the plug to the mod deck and the plug to the RF deck - OPEN. Popped off the plug cover at the RF deck end.... obvious COLD SOLDER JOINT - wire flapping in the breeze.

Got a heartbeat now (can hear PTO in RX) but..... still no workie. Good PA grid current, good IPA plate current, PA dips normally, but acts like no load. Tomorrow (after my back recovers) will yank the RF deck and eyeball the T/R relay good.

I love these things! Stay tuned for Part 2.

Hope all had a great holiday & a great weekend!

Bill,

Which wire is it that was loose?

My hunch is to check the wiring harness again, I'm thinking you found ONE of its problems. I'm thinking that if that wire went to ground it could have melted the insulation which would have made lots of schmooke.

Not many fuses to blow one these.

Which brings up an idea! Scary, isn't it?

It would give better protection to the whole unit if there were fuses near every transformer, especially the 5 volt and 26 volt transformers. It might save a very hard to find transformer! Right, Phil?

Bill,

Which wire is it that was loose?

My hunch is to check the wiring harness again, I'm thinking you found ONE of its problems. I'm thinking that if that wire went to ground it could have melted the insulation which would have made lots of schmooke.

Not many fuses to blow one these.

Which brings up an idea! Scary, isn't it?

It would give better protection to the whole unit if there were fuses near every transformer, especially the 5 volt and 26 volt transformers. It might save a very hard to find transformer! Whatcha tink, Phil?

It consists of multiple taps for 5V and 26.4V etc. I was very lucky to be able to obtain one from a fellow military collector. I did however extensively document the wiring of it in a series of photographs and would be glad to pass them along to you if you need to replace your T-1 (hopefully this isn't the case though). The photos made replacing mine a lot easier and eliminated any guesswork. If you need them let me know. I'm currently in process of "de-yhellifying" the speech amp of my E variant. Bill,

Sad story and enough to make one paranoid...Yikes! Have my "160 meter" T-3 almost ready to go...will do 450 Watts into the dummy...working on scope to put in line...this rig has not been on the air in about three years...so ur making me nervous! Grin...

Looking forward to the solution to ur p roblem...btw...when I fired this one the first time...it didn't go, even though it was working prior to bringing it home from Pittsburgh . . .It worked fine there on a dummy load...found one bad tube in the PTO...so no drive and no spotting sig...

It was a simple solution...well soon be on 1885 if patch cords to the 160 tuner and the scope come together in the next few days...160 was really quiet tonight on the ssb net the meets at 2400Z . . .

More later and good luck,

73,

Gene

# 1546. Smoker T-3 More

Yahoo group: T-368_BC-610
Date: 2002-11-30 03:29:19 UTC
From: billn2bc
Topic: 1546  Message: 1546

Joe wonders which wire... The low B+ (400V or so) that runs on pin 6 from P2 (Mod deck) to P1 (RF deck). Cold joint inside the P1 connector housing.

There was no evidence at all that the loose wire was the source of my smoke. Plus I noticed the PTO was dead PRIOR to the sizzle-n-smoke. Purely my buddy Murphy tossing multiple bugs at once.

I went over all three decks looking & feeling for charring. Also gave the wiring harness the once-over with a white cloth. Nuthin!

I'm sure the smoke-bug will be back. Probably with a bang & then I'll be able to fix it.

Remaining bug (#3) I'm pretty sure is T/R relay or RF out connection and unrelated to the vaporizing-whatever-it-is. Remember the sizzle event happened WITHOUT PA high voltage - that's why I suspected something on the low B+ line.

These are the fun bugs!

Hope to report more Sunday - promised the 'boss' to do some non-fun things tomorrow!

Ah!

Something I just read in a book I just received,
"Handbook of Test Methods and Practices" NAVSHIPS
91828 ca. 1955:

Ventilation and dust conditions present a greater
problem in transmitters than they do in receivers,
principally because there is more heat to be
dissipated. (Two blowers, ya know!) Because dust forms
a film which absorbs moisture, the insualtion
resistance is lowered to a point at which flash-over
can occur. Therefore, cleaning periods must be
initiated and regularly followed. These periods will
vary for different locations. Insulators must be
wiped, corroded metal parts cleaned, and arc-overs
repaired. It is possible to detect poor contacts by
inspecting for evidences of local overheating (or
arcing). Such contacts must be thoroughly cleaned and
tightened. Likewise, it is important that the antenna
connections be regularly inspected and cleaned.

This is a REAL good book!!

NOt really,

The REAL reason to be very detailed while cleaning is to check EVERY item you touch. You do a very careful visual inspection while you're cleaning it. Your nose will tell you a few things, too.

Check the insulation on ALL HV wires, every inch!

Check every resistor, for smoke marks and proper value.

Check every capacitor for leakeage, physical and electrical.

Check EVERY low voltage wire for good insulation and heat damage, especially near the interlocks on the T-368 because problems hide there. Do the resistance checks for the harness.

Check the transformers, chokes, and big capacitors for heat damage, leakeage, and tight connections.

Check ALL plugs and connectors for good connections, solid pins, tight sockets, chafed or shorted wiring, and tight screws. Again, on the T-368, loose screws or connector mountings in some places can cause ultra-sonic modulation!

Check ALL grounding points, tube sockets, transformer mountings, capacitor mounting screws, etc. See above.

Clean, clean, clean every ceramic HV insulator, check them all for cracks, carbon tracking, and tight mountings. Clean the HV wiring.

Check for undocumented modifications or "creative" wiring.

If this is an unknown unit, you just bought it, or are starting it up after long storage you may want to establish a baseline of resistance and voltage checks compared to the values listed in the manual. This will give you something to refer to after you've run it for months or years, it will also show any problems at the present time. Some of those values may be within spec now but may vary to the point of failure later, this will give you something to check against

for YOUR PARTICULAR unit later. It will make
troubleshooting MUCH easier!

If it moves, lube it!

Take a LOT of time cleaning!

But that's just my opinion.

Joe

Joe,

Thanks for the info...yes...!! Cleaning is all important and if one is not a believer...I just leaned the lesson again...getting the T-3 ready to fly and was making antenna connections for receiver from the coax connectors on the side of the "T" Well, no sig at the receiver on 160...to shorton the story...seems the coax (So-239) has been changed out from the usual 'N' type connector...and the at the present SO-239 has either a worn or corroded center pin...used a bit of DeOx plus Q-tip and a tiny screw driver to reduce the diameter of the connectory...cleaning and tuning....subtle by one must check everything...or it won't work...

Not sure how big a job it is to change that SO-239, but the cleaning and adjustiing approach seems the best way to start before tearing thiings apart...

Glad to be making progress again...now for a bit of calibration on the NC-300 that will be the, for now, dedicated rcvr...will eventually use R-392....but haven't built the power supply yet...

More Later and 73,

Gene
W8KXR

btw...some place in the stacks of stuff here at the "Big KXR" . . . seems I have that book, or have seen it....it's very good....

agn,

Gene

# 1551. Smoker T-3, More Murphy

Yahoo group: T-368_BC-610
Date: 2002-12-04 01:03:32 UTC
From: billn2bc
Topic: 1551  Message: 1551

This may be the last installment unless something else croaks before I hook up an antenna.

In the last chapter I was working on an apparent no/low output problem. This happened after the T-3 emitted a large amount of smoke, followed by an open 400VDC feed to the RF deck. See my earlier posts for the fine points.

OK, lets look at the RF output problem... I have been waiting for the right occasion to try a (supposed) brand new 4-400 I had. What better time than now?

I open the (supposed) factory sealed box, exposing the 4-400 to sunlight (supposedly) for the first time since 1987. Plug it in, gingerly install the RF deck. Power up, tweak the filament volts, and let it sit for an hour. So far so good.

You may note a tiny bit of sarcasm regarding the (supposed) brand new tube.

HV on, things looking good! For about 15 seconds. Oops, filament voltage shoots up to 6V, wow! P-P-O. (That's a Panic Power Off).

I wonder what this could be? I have a funny feeling about the (supposed) brand new tube. Yep, open filament. Grumble (supposed) grumble.

Re-install the old 4-400. Guess what... full power, everything tuning normally. But, but, It's too quiet.... P-P-O again.

PA blower not blowing - sigh. Damn, new bearings must be gold plated they sure were expensive!

Re-assemble, re-test. Hmmm... drawing over 200mA with the key UP. Howcome my clamp tube ain't clamping? Could it be the plate cap of the 5933 is not supossed to be flapping in the breeze letting all that air in thru the big hole in the top of the tube?

Install (supposed) new 5933. Oh, I'm getting pretty quick at hauling out & re-installing the RF deck.

OK, it's working now (supposedly).

Remember the smoke?? I still have NOT found the source. The other un-solved issue is the low output power. I did clean and re-tension the RF output connector but it looked OK.

So, my buddy Murphy has cost me a 4-400, a 5933, and a couple of solid gold bearings. Not to mention the original problem is still there.

I suspect this T-368 was NOT manufactured by B&W, but by one of the auto manufacturers. You mentally insert your least favorite auto maker I don't want to start something off topic.

The shack is a shambles. Need to clean it up and make up some more coax. The T-3 needs an antenna.

I hope this has been a bit entertaining. It certainly has been fun digging inside the T-3 (supposedly).

73 all, Bill N2BC

Sniff.... sniff.... Oops... Is that the smoke alarm?

# 1552. BC-610 Modulation Problem ??

Yahoo group: T-368_BC-610
Date: 2002-12-04 01:38:14 UTC
From: Tom Siglin
Topic: 1552  Message: 1552

Hi Fellow BC-610'ites,

I sampled the RF envelope of my rig (very light capacitor coupling) at various modulator current settings and did NOT like what I saw. It looked distorted after ~50% modulation depth. (The RF output was ~325 Watts modulated with a clean 1KHz tone)

While it doesn't sound real bad when monitoring it locally, I thought an opinion from the group would be useful.

Four pics at: http://www.geocities.com/tsiglin/ in 50 Ma current intervals.....(didn't bother showing the idling current, no modulation pic)

Tnx, Tom - WA2LTD

Tom,

Looks to me like you're clipping early in the speech amplifier chain. The squared off peaks then get "canted" further along in the chain due to phase shifts giving the distorted shape seen in your scope photos. This phenomenon is covered in the early handbooks (Radio Handbook, 11th edition for ex.) Recommend a stage-by-stage scope check down through your audio chain to localize the problem.

Topic: 1552  Message: 1554

The 250 MA picture indicates that there is a problem between the Microphone
and the grids of the 2A3 drivers
to the 100TH modulators. I had a similar problem when I
discovered the input (line to P-P grids) was unbalanced.
One side of the transformer was reading shorted to center
tap and the other was (correctly) reading about 1100 ohms.
Check the circuit diagram and look at your waveform into
the 2A3 grids.

Notice!!

There are 157 subscribers to this list, most have transmitters in this catagory and are capable of making these contacts.

Lets have a HUGE showing!

C'mon Gene, no more lame excuses!

Todd, listen in, get that RF deck out, maybe it will respond,.... in some way. We did find a Mod deck in Wyoming free-for-pickup last weekend during the AMI event!

KA3OTT? Be there!

N2BC? This is a NO smoking contest!

W3NP? Isn't the Meissenheimer over 250 Lbs?

K1KHP? Put some more coal in the generator!

W2ZR? I haven't EVER heard you on the air!

K2VH? Is that "Vell Heard"?

W2PFY, has a BC-610 at the cabin! Bring fuel for the genset!

N3IBX, is that thing gonna be ready?

WB6ACU! Who is that? His call sign is on this list, I've never heard him!

Joe KG2CI

Posted by KD0HG on December 04, 19102 at 10:46:06:

The 3rd Annual Heavy Metal Rally will commence the evening of Saturday, December 28th and the party continues all night.

Everyone is encouraged to participate, but the goal is to have as many AM Tall Ships participate. Bring your broadcast iron, military, homebrew, T-368s and KW1s to the party!

This year's rules are: You get one base point per QSO. One additional point if the station you work is running a rig weighing at least 250 pounds. One additional point for rigs with a minimum carrier power output of 250 watts. One point for each different state. One point for each different type of transmitter.

So if you work someone running an RCA BTA-1 1KW broadcast rig, that's three points right off the bat, one for making the contact, two more for 250 pounds AND 250 watts; add a point for states and different rigs as appropriate.

Suggested operating frequencies are:
1885 KC Eastern USA, 1900 KC Western USA,
3870-3890 KC on 75 meters.
7290 KC on 40 meters.

Contest logs should be mailed to my home c/o QRZ address or sent to me by email. heavymetalrally@...

ER will be issuing certificates to all participants returning logs.

Like last year, a trophy will be offered to the Tall Ship AM station that shows up in the most returned contest logs. To qualify, the trophy winner MUST be running a transmitter that qualifies as 250 watts and/or 250 pounds.

The ER Magazine website will have details on all upcoming operating events.

73

-Bill

Hi Gang,

Yikes!!!! The pressure is on...my T-3 is a bit timid, but is up on the dummy load at a toasty 425 watts into the ME-165...now if the receiver will work...found a bad tube, and 160 meter calibration so far off it was out of range of the dial adjuster on the NC-300 . . . not good... glad it only weighs about 50 or 60 lbs...gotta get it up side down to get at the trimmers...

Whew! One glitch after another here at the BIG KXR....but in the ture spirit of "Boat Anchors or Bust"...were burin' the Midnight Oil, errrr solder....in a mad sprint to the 28Th...one more relay hook up for some audio muting and ...now where in the heck is that SB-610 for checkin' out the mod pattern....?

Ok Joe, this is war...on to the the 28th with 600 lbs and about 400 plus watts. . . Now where in the heck are my PL-259's for the patch panel jumper...#$#$#@ . . .

73 es keep havin' fun...

# 1558. 3rd Annual Heavy Metal Rally:

Yahoo group: T-368_BC-610
Date: 2002-12-05 14:40:35 UTC
From: yardleyite@aol.com
Topic: 1558  Message: 1558

Joe, I finally have the T3 up and running but I've had other issues to deal with. Hum in my audio, and not enough audio drive. Just about everyone told me it was because a crystal mike element (D104) doesn't have the +DBM response that a carbonium mike has with 13 volts applied to it has. Anyway, I worked on the mike and speech amp circut for two hours on Monday night, and over three hours on Tuesday night trying different ground/shield conflagurations but each one proved to be futile. I was really questioning my technical expertise or severe lack thereof! What's going on here? I can't even wire up a mike to my T3? Frig Me! I finally found the problem. The D-ten-four I was using had a defective preamplifier. Go figure. I was royally pissed off and decided to try another one for the helluva it. Guess what? No hum, munky swing out the wazoo, and the mods I did to the speech amp actually made a difference. It's not broadcast quailty, but probably almost as good as my modified DX-100B or Valiant II if not better. There is audio intelligence below 300CPS, and above 5000CPS for a change. At least it's airworthy. I hosted the East Coast portion of the CCA AM night yesterday (8PM on 3880) and I actually got a few unsoicited compliments about the audio, signal strength, and NO HUMMMMM! It's no way perfect but at least it's a start. All I did was bypass the audio filters and fatten up the audio bypass caps, remove the speech clipper, and added a 10 meg resistor to the carbon mike input of the speech amp for the D-ten-four. Hope to make the event. Unfortunately 12/28 is my wife's Birthday and we have plans. Maybe after she falls asleep I can sneak down to the basement shack and join in the activities. Well Joe, I keep threatening to get the big boy online for this event, but everytime it rolls around, I'm always consumed by other projects! In the process right now of completing a deal down south for a Collins 212A console to use with it and the mod 5, so some progress is being made. You can bet I'll be listening, if nothing else.

Hey, at least I can move the kitchen stove and roll the transmitter out there to plug it in when I work on it. Helps being single at times like this. One of these days I'll get 240v piped into the radio room (bring your tools if you ever visit).

That mod deck in WY would be great if I could find a cabinet and power supply deck along the way. Could swing into Fair and get the SWR bridge and have the necessary ingredients. Don't forget, the big vacuum variable in my RF deck ist kaput, too. That's why it was given to me, fellow who was going to turn it into an antenna tuner lost interest after he broke it. I still check it from time to time to see if it's sprouted any new subassemblies.

You should see the one sitting in W1RC's garage that W1DEC and myself helped move. Speaking of which, I wonder if Dave has his recent T-3 acquisition online yet? Comments Dave?

de Todd/'Boomer' KA1KAQ

BTW, WB6ACU is Joe, the one on the left coast. He doesn't speak often, but I suspect he's lurking nearby. Probably enjoying another new(old) toy!

Boomer and the Gang,

Your efforts at getting the "big boy" on line are surely familiar...it's a steady effort to keep priorities on line so that something, sometime actually get finished...but...Joe is relentless...so soon as I post this, it's off to work on the mute relay for the T-3 . Sure hope this system flies after the effort....but, one way or another going to make the effort for the 28th...so, off to 'engineering' to get on with the system...

I'm on the march Joe!

I've got a short in my HV/Plate supply on the big rig, so it's a matter of making time to dig into it in more depth than I have. It tosses a 15A fuse on one side of the line, that's as far as I've gotten. Made a deal for some 4B32s to replace the 872s in the event one or both ends up being shorted somehow. Have a good pair of PA tubes and a new driver with them as well, so once the problem is 'rectified', I can move on to the next hurdle. Found a pair of modulator tubes for the mod 5, but they didn't come with any extra time included, so they're still in the boxes. The exciter I got for it is the wrong one too, so I'll need to find another or be rock bound. So many projects, so little time and money!

You keep working at it Gene, I'll just sneak away unnoticed. Keep Joe distracted, drop a screwdriver now and then or yell really loud for no apparent reason.

Good luck!

*tiptoes away*

Hey, even a ricebox can sound decent if you give it a real 'voice' like a pair of 3-500s. It's not a T-3 or a Globe King, but it sure beats a can and a piece of string!

Good luck with it and, most importantly - enjoy!

Joe,

Going to try and make it with the BC-610/R-390A setup.

Just a couple of touch up items to get done.

The worst one is stringing another/new antenna. Us folk in Northern Virginia have to put up with about 9" of snow, AND a system that has no idea what to do with it!

I have to get enough to melt between now and then to get to the antenna system(s).

rt&BasicSearch=

Well, then just do a search for "bc610", it'll be so much easier.

Now, how come there isn't any stuff for T-368's??????

Joe

Makes a difference whether you search on 'bc610' or 'bc-610'. One has coils
and another has tuning units.

Speaking of the coils, I note that some BC-610 coils are fixed link and some
are adjustable. Does anyone know if there was a reason for this?

Bob,

Good luck with the rush to get ready in spite of the snow...but...us ex Buffalo/Rochester NY folks have to smile. . .

Nine inches .... Hmmmm not much more than a heavy frost for the Western New York Crowd...(grin) . . .

But, good luck and keep up the effort...I'm in the same situation with bugs showing up faster than I can solder....

Gene - I'm originally from Chicago and Wisconsin. I too feel like it is a heavy frost - BUT the region has NO idea what to do!

As soon as the WX types say the dirty four letter word "snow", the locals, including the government types, all go run to the store and buy out all the milk, bread, toilet paper, and other such. They don't have enough plows to do the job, and I'm not sure if they did that they would know what to do with them.

My specific problem regarding antennas and placement is simple - I have to be on the roof of the roffed over portion of the 500 sq ft deck. Now THERE is the rub! I'm 52 and don't heal like I used to. One slip and it's the height of the deck roof PLUS another 13 ft to terra firma!

I KNOW it's gonna hurt! So I sort of have little choice but to let THAT snow go away BEFORE I go up there.

Jack,

The two coils provided for the 160 mtr mod came in two different flavors. The B&W that I have came with fixed links, and some others by other folks came with moving links.

AFAIK, the remaining coils have movable links.

From: W2ZR@aol.com
Topic: 1575  Message: 1575

Hi Gang,
Other demands on me have forced me to part company with my T-368
along with some other goodies. As you know, I started keeping a registry of
T-368's and it's gone quite well so far. Is there anyone who'd like to take
over the job of keeping the registry updated? It's really quite simple. I'd
hate to see it stop. We've got around 75 rigs listed now.

73,
Steve W2ZR

# 1578. T-368 Registry

Yahoo group: T-368_BC-610
Date: 2002-12-13 21:25:47 UTC
From: billn2bc <n2bc@stny.rr.com>
Topic: 616  Message: 1578

I've taken a quick pass at turning the T-3 registry into a YAHOO Database. This allows some basic sorting, a 'find' function, and a printer friendly format. It's likely I have finger-checked in a few places, so take a peek & hollar if a correction is needed.

<<< --- To get started, click on "Database" on the left panel

Happy Holidays!

# 1584. RF deck modifications

Yahoo group: T-368_BC-610
Date: 2002-12-22 19:21:33 UTC
From: -- KK4DF -- <kk4df@yahoo.com>
Topic: 1584  Message: 1584

I've modified my RF deck based on the WA1HLR mods, and initial tests are OK with one exception. When I unkey the transmitter, my plate current spikes up high, and usually trips the overload relay. It's like the RF in the tank circuit has no place to go except back through the plate of the final. I didn't notice this problem before the modifications. I completed the entire mod, which includes lower capacitance in the final amp screen and clamper tube plate circuit, if that matters.

How does all the energy in the tank circuit normally dissipate? Is the antenna relay supposed to hold in long enough to dissipate through the antenna? I need some help on this one.

Walter Wilson - KK4DF

From: Bill Coleman N2BC
Topic: 1584  Message: 1585

Hi Warren. I think you mean going from transmit to receive.... Have you tried keying the rig in CW? If you get the same effect on key up, I would suspect the clamp tube.

The clamp tube is supposed to reduce the screen voltage to limit PA plate current when there is no RF drive. In AM, this happens when switching to receive and leaving the HV on, or on key up in CW.

GL, Bill

Ah,
Did you reset the overload relay after the mods? Also the original
circuitry provided a load to the power supply, when the rig was in
standby
with plate voltage on, and there was a loading factor for the power
supply
that is not there with the mods. Is the Clamper tube working, has the
dropping resistor opened as a result of the NEW higher voltage going to
it? Sounds like the clamp tube isn't doing its' job.

In the interim I think you'll have to investigate the
option of gutting a relay with an octal base on it and
building a 20 second on-delay circuit on it.

Pins 2 and 3 are the "115 VAC coil" and 5 and 7 are
the switched circuit. This shouldn't be too tough to
do. Most electrical supply houses can get you a timed
on-delay relay and the octal relay, gut both,
re-assemble according to your needs, plug and play.

You probably wouldn't be able to get an on-delay relay
with the proper pin-out, have to make your own.

# 1589. auto transformers/ variac power for T-3?

Yahoo group: T-368_BC-610
Date: 2002-12-23 20:41:49 UTC
From: Trevor Lewis
Topic: 1589  Message: 1589

I really, really hope to be in a position to begin seriously checking out and powering up my T-368E, and, Murphy & his law willing, trying it on the air in the next month or so. Now if other events will simply let me take the time to finish building the shack, wiring it all, etc...

Anyway, with that as context, my mind turns to powering the T-3. I know it needs at a minimum a very "stiff" 20(+) Amp 120 VAC service. I live in a rural area, and voltage is highly variable by day/ month/ season and sometimes runs quite high (approaching 130 VAC under some conditions on a known accurate meter). The utility service to the house-although it is a 100A service-- is itself not very stiff [loads such as furnace blower start-up makes lights visibly dim for a moment even though I have been careful to balance the household's various 120V loads across the two legs of the 240V bus in the main breaker panel]. I may be able to get the electric coop. to put in a larger pole transformer, which might improve the voltage sag under load, but that would not address the fact that the voltage is sometimes just plain too high, especially for older equipment like the T-3 that was built more for the 110-115-120V range.

So I'm mulling over the best [and reasonably affordable/ achievable] way to power my T-3 so that the voltage to it is reasonably stable and not too high. Figuring out a way to run it off of 240VAC would at least reduce current draw, which would minimize the effect of the T-3's load on voltage. Since it is a T-3 "E" the plate transformer, etc., doesn't give me the option to modify the unit to run directly off of 240VAC.

Any suggestions on reasonably affordable/ straightforward ways that I might rig up a 240 --- > 120 step-down that also incorporates a variable or multi-tap arrangement? That way the T-3's 120V load would be inherently balanced across both legs of the 240V service, voltage drop/ variation from the T-3's load would be minimized, and the variable or multi-tap aspect would let me lower the voltage to the T-3 on days when the utility voltage is too high. I think I still have a set of 120VAC dual/ ganged-shaft variacs of 15A or so (if I can find where they are and they didn't get lost in a move), but absent some isolation transformers, it seems like the autotransformer aspect of the variacs would prevent me from using them for the 240 -- > 120, and they don't have the voltage rating for use directly on 240, nor would either individual variac handle the T-3's full current draw at 120V.

Any other ideas are also appreciated. Best wishes to all for the holiday season and New Years

Some comments and observations on T-368 primary power requirements.

I've run my Basic several times off a portable MG set where the voltage varied between 125 vac on key-up and 110 key-down. Worked just fine except for the power output being down a bit. This set was also run successfully for two days at a MD hamfest a few years ago with a LONG extension cord from a doubtful AC power source. Didn't actually measure the regulation in the latter case but noted the filament voltage varied significantly key-up/down. I would note that these things were designed for field use so would have to be tolerant of voltage fluctuations. This is why the filament rheostat was included. I would say just plug it in and give it a try.

Operation on 240 would have some advantages, of course. The earlier sets had dual primary HV transformers but, oddly, no provision for 240 volt operation was included in the chassis or cabinet wiring. Later transformers had a single primary. Check your transformer, though, as a lot of drawer swapping apparently took place at the depots.

It is also possible to divide the load in the transmitter and run the HV trans. off of one leg of your 240 volt bus and the rest of the transmitter circuits off the other leg. I haven't tried this personally but know others who have done so with good results.

From: Walter Wilson <kk4df@yahoo.com>
Topic: 1584  Message: 1591

Problem solved! After many attempts to solve other problems, I
finally removed the portion of the mods involving reduced capacitance
in the final screen and clamper circuit area. I probably had a bad
cap in there; not sure. But going back to the original cap, and
everything is working very well. The audio response is much improved
with these RF deck mod changes. I'll try to post some pics over the
holidays, now that things are working.

Thanks and Merry Christmas to all!

I'm going to say:

You should get a 200 amp service to your house, 100 is too small for anything more than the minimal needs of the average house. The reason is because of the surge current required when motors start up or someone keys up his BIG transmitter. There isn't enough "headroom" for the service to pass the required current. The NEC says a motor can be allowed to draw up to 13 times its full load current rating when starting.

If you look at the current requirements for a T-368E you will see that it needs a 21 amp circuit! That means you should put it on a 30 amp breaker with #10 wire feeding it, especially if you're going to run it for more than 3 hours at a time (that's transmitting, of course) then it flops over into the NEC's "continuous duty" catagory, if you want to nitpick.

Sure, you can run it on a 100 amp service and a maybe on a 20 amp circuit, but you did ask.

But that's just my advice from 23 years of repairing the "creative" wiring done in houses, hospitals, factories, foundries, etc. For people like Bausch & Lomb, Kodak, Xerox, Weyerhauser, Fisher Price,.....

Topic: 1589 Message: 1593

Hi Trevor,
I work at an electric utility and am "shocked" at your poor voltage. I would complain to your coop if your voltage exceeds 126 volts! The voltage your coop / utility should provide should be in the range of 114v to 126v (120v + or - 5 percent) at your meter. The voltage drop through your house may lower it to 110 volts, and beyond that you have some serious low voltage!
In New York State, the Public Service Commission requires the utilities comply with an order called "conservation voltage reduction", which is an attempt to keep the voltage from exceeding 123 volts. At most of our substations, there is a limit at the substation that keeps the load tap changer (LTC) that regulates the output voltage of the transformer from exceeding 128 volts. It is "first house protection" to prevent high voltage. If we are doing our job right, the substation settings will not allow the first house to ever see more than 126 volts. During times of peak load, the substation LTC has base voltage and compensation settings that will raise the distribution voltage to compensate for the voltage drop on the primary wires. During lighter load times, the LTC will lower the voltage to compensate for a decrease in drop on the wires. If the base voltage and compensation settings are correct at the substation's LTC or voltage regulators, and the load was distributed evenly along the circuit, ideally the customer in the middle would see a somewhat constant voltage throughout the day. Unfortunately customer on the beginning or end will see more of a swing, but it should not be outside of the range I mentioned above. Capacitors and / or voltage regulators are commonly added to the line to help keep the voltage regulated at acceptable levels. Variations in loads on your distribution circuit throughout the year may require the utility to make regular adjustments to the substation and circuit equipment to maintain acceptable voltage.
All this being said, I think you need to have your utility / coop put a recording voltmeter on you service and then correct any problems they are causing. It is possible you are overloading your distribution transformer, but I doubt it. The coop may need to upgrade your service from #2 wire to 1/0 wire, which may help. If they do not help you... and your voltage is poor, contact your public service commission to get results.
In another post regarding your house wiring, Joe said #10 wire with a 30 amp single pole breaker is a good way to go. I agree. I have a 100 amp service in my house with good wiring, and it's fine as long a you have good diversity. Put everything on at once, and that's another story.
Good luck, Dave / KA2J.

# 1594. [smoke test combined with?] 3rd Annual Heavy Metal Rally!!

Yahoo group: T-368_BC-610
Date: 2002-12-24 17:01:20 UTC
From: kd1ytr390a <tlewis@primmer.com>
Topic: 1556  Message: 1594

If I were to find time and rig up some temporary power and antenna cabling, how bad an idea do folks here on the list think it would be if I were to try to fire up my T-3 on the air. This event [HM Rally] [or shortly before the event] would be the first time I'd have put the unit on the air. I acquired it about 3 yrs ago in supposedly working condition, but I guess other circumstances about the seller/ sale have made me less confident in retrospect about how reliable that representation of condition was. I can turn on all power to the unit without any obvious problems, and the meter readings seem in or pretty close to the ballpark for what one would expect in energized but unkeyed state. The unit has tags showing it was gov't reconditioned in the 80's and was owned by a ham, probably acquired through fair radio; when I examine the rig's innards, there are no obvious signs of any significant mods or failed components.

I've worked on & revived plenty of tube gear, including some other military BA transmitters like an ARC-13, but it's clear to me that I'm a beginner compared to some on this list.

My dilemma is that I usually try to be fairly methodical/ meticulous in reviving old equipment-- identifying and solving potential problems before giving it a full workout-- but then again, this beast is supposed to have lots of protective devices, and meant to survive hostile conditions. If I try to use the T-3 and it doesn't work or something minor zorches out, I will not be upset. If the T-3 works or even comes close to working, it will really light a fire under me to finish all the work I need do to finish the shack, etc. But I will feel like a royal dummy if I try to put the T-3 on the air and wind up doing extensive damage as a result of not having been more methodical.

Am I being too cautious if I don't just try to fire it up and see what happens, or would I be flirting with some possible damage to important/ hard to replace parts if I do a "plug in, turn on, tune per manual, key microphone"

[PLEASE NOTE: please reply on-list or to my other e-mail at kd1yt@...; in the coming week I won't have access to the e-mail that this yahoogroup account is under; yes, I'll change that eventually]

Thanks & happy holidays

From: billn2bc <n2bc@stny.rr.com>
Topic: 1595  Message: 1595

Hi Trevor, as the self-proclaimed T-3 smoke champion (see earlier posts)... I say GO FOR IT !

Besides, tomorrow is predicted to be perfect antenna fixin' weather, with 16" to 20" of snow scheduled (here anyway).

Seriously, I'd spend a while with an ohmmeter on all the voltage lines looking for obvious problems first. The TM has resistance readings for all the tube sockets, at least check the IPA, PA, and modulators. MAKE SURE the bleeder resistors are OK. I had one on another rig that looked OK to the eyeball but was open - you can guess how I found that...

Second, if your T-3 still has it's infamous interlocks, you might as well clean them now - or you'll be fighting them later.

Lastly, a major safety check, make sure the AC primary feed is correct (a source of potential cobbling due to the oddball sockets), and the fuses are properly sized.

When I initially brought mine up it wouldn't 'go' at all because the mod deck was looking for an interlock that simply did not exist in the cabinet. This was the result of having a mixed bag of different model drawers and cabinet.

However, I have yet to find a bad cap typical of this vintage gear.

Take it slow & take it safe. The above checks will only take a few minutes. Then go go go.

Keep the list posted - I can help with real smoke!

Happy Holidays & 73 Bill N2BC

Well,

Clean all of the HV insulators, check the sparkgaps,
check the HV wiring for cracks/shorts, test it into a
dummy load for several minutes, or as long as you can.

Then, at SOME point, you'll realize that you have to
key the mike and after you get through your checklist
for the millionth time is as good as any.

Give it a shot! You'll be in the same boat as the
rest of us.

There are several others who are going to put rigs on
the air for the first, or nearly so, time. They've
rushed to make this deadline, too.

Its a goal to be met!

You'll be very disappointed if you DON'T do it.

Joe

I have documented the modifications I made to my T-368E with
pictures, a schematic, and comments. Thanks for all those who helped
me make this a successful project.

Joe,

Made It . . . Made several contacts on the Boat Anchor Rally and did it
with a very bad voice due to a case of the Flu...

But, were on and the T-3 is getting great reports....all on 160 meters
at or near 1885 . . .

73,

Gene

This guy should get an award for perseverence, the
degree of difficulty was right up there.

He's been working for months to get this rig on the
air and get an antenna up.

The flu was NOT going to stop him!!!

Well done, Gene!!

From: K5JV
Topic: 1601  Message: 1601

Greetings to all,

I just opened the crate and removed the last of my crated BC-610's. This one was originally an "F" model that was converted in 1966 to a T-213/GRC26. From the enclosed paperwork, it appears that this case has not been opened since that date. It is different from the other T-213's that I have had in that the balanced feed line connectors were not removed in the conversion/re-nomenclature. This transmitter will clean up to be an extremely nice BC-610/T-213. I will sell it as is, or cleaned up and operating complete with a full set of good coils, tuning units and original power/interconnecting cables. As is, complete $2,500. Cleaned and tested, $3,500. Will consider delivery anywhere in the original 48 for cost of gasoline.

I have another T-213 that I have been operating for the last few years. It is different from the one above in that the front panel is hand lettered and the balanced feed has been removed. This is a very clean, good working transmitter. I will sell it as a complete, operating set for $2,000 and will consider similar delivery options.

I have one extremely nice "E" model as a complete set, $2,500. I have a couple of working, fixer-uppers that I will sell in the $700 to $1,000, depending upon options.

Hi Joe and Heavy Metal Gents!

Yes, the thorat is still giving off sounds that would put a Buffalo to shame . . . no Highs...maybe should have used an equalizer...but, anyway...I made it and am looking forward to fine tuing the set up so it's a bit smoother to operate...plus hope to add some kind of scope monitor and in line swr monitor...Wow...really flying blind, but Yep...I'm on with a true Heavy Metal Machine...and looking forward to te next event whatever it turns out to be....

Joe special thanks for injecting much spirt and good humor to the reflector...and keeping me on track!

Best of New Years to all and see u on 160 M's...

73,

Gene

Gene,

Get over the flu.
Congrats on the T-3. Can you operate on 1945kc? I have a little antenna trouble with 1885 (soon to be solved) but I would like to hear from you and have a T-368 to T-368 QSO.

Let us know where you will be hanging out and maybe we can get the entire reflector mob on the air one night this week.

# 1604. House service neutral?

Yahoo group: T-368_BC-610
Date: 2003-01-01 04:20:28 UTC
From: redmenaced <redmenaced@yahoo.com>
Topic: 1604  Message: 1604

Happy New Year everyone!

During the discussions of the size circuit needed to run a transmitter such as a T-368/BC-610 one important item was overlooked. That is the condition of the neutral wire going from the panel out to the pole. Many times this is allowed to deteriorate to the point where it is no longer safe to carry such a large 120 volt load. In an overhead service the neutral is the group of wires wrapped around the two hot wires inside the service entrance cable. If the covering of this cable has disappeared, for whatever reason, those wires are open to corrosion damage which may not take long to cause them to disappear altogether! This is often not considered by the average homeowner.

What will happen if this fails is that 240 volts will be acrossed all of the 120 volt circuits with the appliances making a voltage divider. What voltage each appliance sees will be determined by its impedance. Some will go POOF, some will just get hot enough to burn the house down.

A 21 amp load being cycled on and off repeatedly will certainly stress an already weak neutral.

ALL newer houses, I mean 30 years old, have aluminum service entrance cables! They haven't made copper service entrance cable in 40 years! How long has it been since the bolts in your panel and meter socket were tightened? Are they tight enough to pass enough current to trip the breaker? Got any "blue" terminals? Melted plastic? Smoke trails up the siding?

If its not moving, GROUND IT!!,..... does your service actually HAVE a ground?

Joe

Joe and Gents,

Yikes....not sure if I'm going to sleep too good tonight...guess I better do some checking 'cause the T-3 is getting some good rpts down here on 160 currently in QSO with Haggertown, Md, Townsend, Mass; and Greenbay, Wis....even with nasty QRN the sigs are big and 100 % ...

Seriously, I will be doing some checking . . . House was blt in '74 . . .

Tom,

My T-3 operations are really new and station is just starting to smooth our....not sure if I can tune to 1945 ? will have to experimient with the tuner...

Just now set up for 1885 plus or minus a bit...will do a bit of experimenting and advise...but now monitoring the 1885 window whenever I'm in the shack...

Sure hope this stuff holds together for a little...so I can get some more gear up and running...

btw have you heard of the N9FOY mods for the T-3? Mostly audio mods but heard about them and wonder what they are all about...? You can tell I'm climing the learning curve...suppose this is old info....

# 1607. T-368 N9FOY Mods

Yahoo group: T-368_BC-610
Date: 2003-01-01 11:07:43 UTC
From: Jerry Kincade
Topic: 1607  Message: 1607

Gene, check out http://home.maine.rr.com/bhowes/t368.htm and click on the N9FOY link. My Bendix T-368C is waiting checkout and lightoff, the next project after I finish the second R-390A I'm currently doing. My T-3 was formerly owned and operated by Tom, N5AMA, of AM fame. I'm hoping it will fly when it gets some juice, but haven't plugged it in yet. Maybe we can talk T-3 to T-3 one of these days.
73, Jerry W5KP Mustang, OK

Gene,

Sri I missed you last night. I'll do more listening on 1885 tonight so we can run T-3 to T-3. I can fool the T-3 into liking my antenna system. I checked Bruces website but could not bring up the N9FOY mods so I'm not sure what they are.

Tom,

My T-3 operations are really new and station is just starting to smooth our....not sure if I can tune to 1945 ? will have to experimient with the tuner...

Just now set up for 1885 plus or minus a bit...will do a bit of experimenting and advise...but now monitoring the 1885 window whenever I'm in the shack...

Sure hope this stuff holds together for a little...so I can get some more gear up and running...

btw have you heard of the N9FOY mods for the T-3? Mostly audio mods but heard about them and wonder what they are all about...? You can tell I'm climing the learning curve...suppose this is old info....

73,

Gene

Tom Mackie wrote:

Gene,

Get over the flu.
Congrats on the T-3. Can you operate on 1945kc? I have a little antenna trouble with 1885 (soon to be solved) but I would like to hear from you and have a T-368 to T-368 QSO.

Let us know where you will be hanging out and maybe we can get the entire reflector mob on the air one night this week.

Hi Joe and Heavy Metal Gents!

Yes, the thorat is still giving off sounds that would put a Buffalo to shame . . . no Highs...maybe should have used an equalizer...

but,
anyway...I made it and am looking forward to fine tuing the set up so it's a bit smoother to operate...plus hope to add some kind of scope monitor and in line swr monitor...Wow...really flying blind, but Yep...I'm on with a true Heavy Metal Machine...and looking forward to te next event whatever it turns out to be....

Joe special thanks for injecting much spirt and good humor to the reflector...and keeping me on track!

Best of New Years to all and see u on 160 M's...

73,

Gene

Joe,

Made It . . . Made several contacts on the Boat
Anchor Rally and did it
with a very bad voice due to a case of the Flu...

But, were on and the T-3 is getting great
reports....all on 160 meters
at or near 1885 . . .

++++++++++
This guy should get an award for perseverence, the
degree of difficulty was right up there.

He's been working for months to get this rig on the
air and get an antenna up.

The flu was NOT going to stop him!!!

Well done, Gene!!

Doesn't seem to be anything there (?)

Also, in regard to the WA1HLR mods described at this site, it has been found that neither the B&W 800 nor the National 175 have enough inductance for 160M. There was a thread on this a while back.

Hello fellow Heavy lifters,

I have available the following parts:

High Voltage transformer for Basic model, has dual primary, secondary is
5670 VAC CT. 200.00 plus Shipping.

High voltage supply Choke 11 Hy, 500 MA. 125.00 plus shipping.

2 each 4 uF 4KVDC oil filled caps 75.00 plus shipping.

80K 200 watt resistor, 20.00 plus shipping

Modulation transformer for T-368 Basic model, pri. 20300Z to 9100Z
secondary, 150.00 plus shipping.

All of these items are NOS but the transformers have been repainted.
The choke and the modulation transformer come with the spark gap
terminals
and hardware for same.

Thank you for reading this!

# 1614. mystery tube [7527] in final

Yahoo group: T-368_BC-610
Date: 2003-01-06 02:04:37 UTC
From: kd1ytr390a <tlewis@primmer.com>
Topic: 1614  Message: 1614

Hello all--

Dug around in my T-368E this weekend looking for any apparent/ obvious physical damage/ flaws [the guy I bought it from 3 years ago let it fall over on its front panel in transit :-( ] before I move on to electrical checks.

Good news is that physical inspection shows a lot less damage than I'd have expected from when the rig took a dive. Broken knobs (already got replacements from Fair Radio), broken mic connector on front of Modulator Deck (anyone have an extra or know a source; Fair Radio is out), and a good size ding in the RF deck right under the model/ ID tag. But, amazingly, _no_ other apparent damage inside or out. Another testament to what a robustly built item the T-3 is.

But I am puzzled at the tube I found for a final tube It is labeled "Eimac 7527" It does appear to be a tetrode, with internal structure looking a lot like a 4-400. Except the base has no ceramic or metal base structure as I've always seen on 4-400s; instead, the pins simply come straight out of the glass as is the case on a 3-500z. The real prior owner of the rig is a silent key, and the guy [dealer] who I bought the rig from is-- [bite tongue to avoid libel/ slander]-- in my _opinion_ not all that likely to be available, helpful or accurate. I looked quickly in some of my old books with transmitting tube data, and also ran some google searches for the 7527, but have not found much. Data I found at
http://www.wps.com/archives/tube-datasheets/
seems to suggest that the 7527 is similar but not identical to the 4-400, with the 7527 requiring less negative grid bias voltage, having less grid dissipation, and despite having a 400W plate dissipation, seemingly not being able to belt out as many output watts as a 4-400, due to plate current being limited to 270ma instead of 350 ma for the 4-400.

Anyone know anything about the 7527 or its suitability as a substitute for the 4-400 when used in a T-3 ?? I don't have a 4-400 on hand at the moment. Since I already have the 7527, it doesn't bother me if it lives a shortened life in the T-3, as long as it isn't likely to do the T-3 any long-lasting harm.

Thanks & 73
Trevor

From: f6fed
Topic: 1616  Message: 1616

Happy New Year at all.

I am needing a BLU generator adapter unit HAETHKIT model SB-10.

An other model is possible, but the power output of 5 watts at least is necessary, and also the Manual.

With this unit an AM transmitter work in SSB or LSB mode.

Best 73 and thanks.

Got an email from John wanting to know if anyone would be interested in participating in a D Day commemoration activity June 6 trhough the 8th. He needs to know what times and frequencies would be best for stations here in the USA. Any input from the group?

73's

Mike

**********

Dear Mike,
This year over the weekend 6 to 8th of June
I plan to set up a 40's period military wireless station at the Golden Lion Southwick village Hampshire England , the pub is well known as the unofficial officers mess from Southwick house where the entire D Day invasion was planned from. To summarise I have the place I have the equipment, I have the operators to use it.

What I would like is participation from your
side of the pond please and some advice as to what times and frequencies will give us the best chance of a contact.

Best regards

John

Topic: 1623  Message: 1623

Gentlemen:
In need of a few Chassis mounted J8 jacks.
J8 is located on RF Deck chassis and receives
plug P101 from chassis of Exciter(oscillator/
multiplier subassembly) that is positioned in front of J8. It's ok if P101
accompanies J8.
Also, does anyone know if these items still among
inventory of mfr.? Thanks for checking. 73,
David, W6PSS

Hi All,

I just uploaded pictures of a Calibration Book that some lucky list member just bought on E-bay, just in case anyone hasn't ever seen one. This is the book that fits into the pocket on the side of the transmitter for a handy reference in tuning the variable caps when changing bands.

The pictures are on the homepage for this list, approximately here:

http://photos.groups.yahoo.com/group/t-368_bc-610/lst?.dir=/calbook&.src=gr&.order=&.view=t&.done=http%3a//briefcase.yahoo.com/

Maybe somebody can do some high quality scans so we can
make our own books. Can we get a count of how many folks
here would want one of these? It might be worth making a small
run of reproductions.

Hi All,

I just uploaded pictures of a Calibration Book that some lucky list
member just bought on E-bay, just in case anyone hasn't ever seen
one. This is the book that fits into the pocket on the side of the
transmitter for a handy reference in tuning the variable caps when
changing bands.

The pictures are on the homepage for this list, approximately here:

http://photos.groups.yahoo.com/group/t-368_bc-
610/lst?.dir=/calbook&.src=gr&.order=&.view=t&.done=http%
3a//briefcase.yahoo.com/

Sure wish I could find a pile of these somewhere!

Topic: 1628  Message: 1630

Greetings to all,

The discussion on the ""Calibration Book" has me wondering. Are you talking BC-610 or the T-368? The 610 used a set of individual calibration charts, not a book. Some were plastic laminated, some were not. They were specific for each model. I have several different sets that I could make available for duplication. If this is to be done, it should be done fairly quickly because I have sent out four BC-610's this month, each with a complete set of proper tuning charts. The supply is limited.

All of the T-368's have gone. I still have some parts (also for the BC-610). All of the BC-610's have gone with the exception of three restoration projects still on going: an "E", "F", and "I" model. One or two of these will be available by Dayton. These will be extremely nice transmitters with new silk-screening, case and rack painting on the "F" and "I" models. They will include speech amps and BC-939 tuners. One of the 939's is navy blue to match the T-368.

Topic: 1631  Message: 1631

At one time I contacted Bob Downs about getting the T-368 calibration book reproduced but there wasn't much interest so I didn't persue it. He seriously considered it so it isn't completely foreign to him, and he does good work, too.

How 'bout it? Should we persue getting this and Lon's BC-610 calibration sheets reproduced?

This is the largest gathering of people using these transmitters, if its going to get done it will be done by us, there certainly isn't any other group that has enough interest in it.

Certailny if we do it there will be others that will want them outside of this group but there has to be a large enough interested party to get it started.

Joe

Joe & Group,

I had been wondering whether this was the same Summary of Tuning Instructions that I have an original of and that you and I talked about reprinting quite some time ago. It shouldn't be difficult to do. However, I am upgrading my scanner/printer/copier tomorrow supposedly, and if it's like it was when I got the DC-230, there will be a "learning curve" :-)

Also, I have two or three sets of BC-610 tuning chart sets as well. Believe that Lon said he had four. Maybe mine won't be all dups of what he has.

Count me in for a t-368 book. If a reproduction run does not
work out, I would appreciate someone doing some high quality scans,
or loaning me their book for me to scan. It is easy enough for me to print the
pages, laminate them and have them spiral bound.

I also have a the small tuning chart that is in very good condition.
I don't want to get rid of it but I would be glad to do a high
quality scan of it for anyone that would like a copy. It will be a
big file. I could break it up in to smaller files for those that have
limits on file sizes. NO charge just glad to help. I will can it in
the next day of so. send me a e-mail and I'll do it if there is
enough interest.
BTW.. My call has changed. It's W9AMR Short for AM Radio.. new E-Mail
is w9amr@.... I still have and will answer the old e-mail
address. 73's
Larry

Would it be appropiate to post these charts in the files area as Acrobat files ? It could be done as a page per chart, or as a multi-page file for a book of charts for a specific model. I have Adobe Acrobat (full), but only a phone line dial-up connection which could be a little problem if the original image files are very large.

I don't imagine that it would be a problem if the file space
is available to hold the PDF files. I don't know how much
Yahoo allows.
I don't have a high speed connection either but maybe you can
put them on a CD and send them to someone who has a high
speed line.

Hi Guys,
Ah the tuner displayed is for the scr-399 as modified for radio jamming in the .9 - 18 mhz ranges using the BC-610 and amplifiers. Please note there is no band switch on the front panel to select whip, or long wire usage for the unit. Nice unit though, looks good but it is designed, read optimized for mobile operation.

Not just sure who/how/when this subject stands...

But - - count me in for a book too...when, if they should become
available...

73 to all, and having great fun on 160m with my T-3...still sorting out
fan quieting techique, but have solved rcvr mute and can not operate
fairly smoothly with NC-300 . . . looking forward to using R-392 with
the T-3 ... colors don't match 8>( but it fits really nice on top of
the T-3...and yes, will in time hook to an R-390A .

Oh My,
Someone painted it fire engine red in side! Looks complete though and
that is a DX-40 and A VF-1 VFO and a Variac Wheel for Whatever reason
on the other piece! A good find A) if you can stand red, B) it has the
popular tuning units and RF Plate Coils. A word of caution, if its'
working state is unknown, a good price for the BC-610 is 350.00, the
rest
I am not familiar with pricing but if the DX-40 was used with the VF-1
to drive the BC-610 beware of severe modifications to the '610.

Looks like a french whorehouse inside! What are these people thinking?? I know the current high bidder, bet he wants it to counterbalance the T-3 he picked up a while back. Either that or he wants the purtiest '610 in town!

I have one of these sitting in Colorado waiting for me. Unfortunately much of the stuff has been stripped out of it, but it comes with the shock mount and all the chassis, along with some of the iron. Anyone out that way interested?

Hey Dave,
You did a great job, so you deserve the REAL pat on the back. I really enjoyed helping out, as did Jenna. Although she still likes your T-368 setup more than mine, because you have so much more ROOM, ahem!

All kidding aside Dave, it was my pleasure, and remember give a call if you need anything further. See you on the air OM!

Jim,

Good advice on the bench mark price for the 610 in unknown condition....All too easy to get carried away with the chase...making mental note of ur info...es btw, good adivice when the hunt is on at this season's Hamfests too...

Good hunting to all and keep a cool head...

73,

Gene

So, how 'bout it, Dave?

Has the new son-in-law 2B been bitten by the radio bug yet? It
should be a requirement, ya' know.

The T-368 sounded real good "up the river" here in Belfast, NY.

How 'bout a report?

Joe

Hi Joe and all...
Yes, I have successfully put my T-368A on the air. Many thanks go out for the encouragement of Jim WB2FCN and others for giving me the "can do" attitude necessary. Jim stopped over to the house and let me borrow a wattmeter, dummy load, and gave me some parts and tubes for my adventure. Joe, I remember telling you in a QSO that I might have an opportunity to get a T-3, and you offered some encouraging comments, as I struggled with the idea of taking on a `bigger' project. I enjoyed working through the steps of successfully getting the T-3 on the air. I also have an R-390A and the ME-165/G to go with the T-3. I got the ME-165/G up and running in one night by replacing 3 resistors and both diodes. Ed, K2MP, gave me a hand with the R-390A. I spent 4 weeks on the T-3, because I wanted to enjoy the learning process and now I want to run it for a while and solve any bugs that may appear. I feel very fortunate to have a T-3 in such good shape and that the problems presented were not so complicated that I couldn't figure out how to solve them.
After having it on the air again last evening, I am also very pleased that the audio is sounding so good and clean! And finally, I am thankful for the many amateur radio operators that are there for encouragement, friendship and so willing to help.
I'm looking forward to many years of enjoyment with the T-368A.
Talk to you soon
Dave / KA2J

Hi, Back after a long break. And Back at the 610-E. I had to remove the RF deck and found a number of bad parts under the tunning boxes, resistors/caps ect. I purchased parts from a supplyer and had to take certain values to make up the caps by doubling up to reach the values. I don't like this, Can anyone reccomend a supplyer so as to obtain correct values ? sorry about the last post as I forgot my ID and ect. thankyou from Jerry KR4BR

The Crosley T-368C lives! Using a calibrated Bird meter and a 500W Bird 50-ohm load, I'm getting 480W of clean carrier (CW mode) at 340 ma plate current. PA grid is about 13 ma, which is a tad higher than called for in the manual (8-12 ma, I think). Do these readings pass the sanity test compared to all it's bretheren out there, or is the highish grid current cause for some concern? Looking forward to pushing some audio through this thing soon.

I know this isn't a r390 forum but... The 4kc filter took a dump in my r-390a and my transmitter is lonely with out it.. Anyone have a spare they want to sell? or know of a replacement after market??. I have E-mailed Fair radio and have heard nothing back yet so I am looking for other sources also. I have heard of longwave products but I can't fine them on the net anywhere. A 6kc to replace the 4kc would be cool.

The T-368 is fine. The thing has been running great with the exception of a failed deck interlock that went crispy. I was able to clean it up and found a new spring at the local hardware store that was close so it has good tension. My best guess is that it wasn't aligned completely square (it is now). Might be worth looking at them from time to time to see any bad signs. Got to love those T-3s..

Dave Curry filters are advertised in and sold through the ER Store at Electric Radio Magazine. Address is ER Store, Box 582, Pine, CO 80470. Phone is 720-924-0171, email er@.... Available are filters for the 75A-4 and R-390A in 500 Hz, 2.5 KHz, and 6 KHz. they are not cheap at $199 each, but they are very good filters. See http://www.r390a.com/html/Curry.html for some details from Chuck Rippel's page, who also sells them but only, I think, as part of one of his legendary rebuilds. Curry's main website is not currently functional, don't know why. BTW, if you are a T-368/R-390 guy and are not a subscriber to ER, shame on you. One of the best (and only) real boatanchor publications ever, and some really great reading. :-)
